all docs	docs citations	times ranked	citing authors

#	Article	IF	Citations
1	Hydrologic connectivity between landscapes and streams: Transferring reachâ€•and plotâ€scale understanding to the catchment scale. Water Resources Research, 2009, 45, .	4.2	430
2	Dynamics of nitrate production and removal as a function of residence time in the hyporheic zone. Journal of Geophysical Research, 2011, 116, .	3.3	370
3	Geomorphic controls on hyporheic exchange flow in mountain streams. Water Resources Research, 2003, 39, SBH 3-1-SBH 3-14.	4.2	338
4	Power-law residence time distribution in the hyporheic zone of a 2nd-order mountain stream. Geophysical Research Letters, 2002, 29, 18-1.	4.0	248
5	Effect of morphology and discharge on hyporheic exchange flows in two small streams in the Cascade Mountains of Oregon, USA. Hydrological Processes, 2006, 20, 267-287.	2.6	171
6	Hillslope hydrologic connectivity controls riparian groundwater turnover: Implications of catchment structure for riparian buffering and stream water sources. Water Resources Research, 2010, 46, .	4.2	165
7	Coupled transport and reaction kinetics control the nitrate sourceâ€sink function of hyporheic zones. Water Resources Research, 2012, 48, .	4.2	158
8	A modelling study of hyporheic exchange pattern and the sequence, size, and spacing of stream bedforms in mountain stream networks, Oregon, USA. Hydrological Processes, 2006, 20, 2443-2457.	2.6	145
9	Labile dissolved organic carbon supply limits hyporheic denitrification. Journal of Geophysical Research, 2011, 116, .	3.3	128
10	The role of the hyporheic zone across stream networks. Hydrological Processes, 2011, 25, 3525-3532.	2.6	117
11	Patterns in stream longitudinal profiles and implications for hyporheic exchange flow at the H.J. Andrews Experimental Forest, Oregon, USA. Hydrological Processes, 2005, 19, 2931-2949.	2.6	97
12	Simulation of dynamic expansion, contraction, and connectivity in a mountain stream network. Advances in Water Resources, 2018, 114, 64-82.	3.8	84
13	Variations in surface water-ground water interactions along a headwater mountain stream: Comparisons between transient storage and water balance analyses. Water Resources Research, 2013, 49, 3359-3374.	4.2	71
14	An analysis of alternative conceptual models relating hyporheic exchange flow to diel fluctuations in discharge during baseflow recession. Hydrological Processes, 2010, 24, 686-694.	2.6	61
15	Flow velocity and the hydrologic behavior of streams during baseflow. Geophysical Research Letters, 2007, 34, .	4.0	57
16	Changes in hyporheic exchange flow following experimental wood removal in a small, lowâ€gradient stream. Water Resources Research, 2009, 45, .	4.2	45
17	Comprehensive multiyear carbon budget of a temperate headwater stream. Journal of Geophysical Research G: Biogeosciences, 2016, 121, 1306-1315.	3.0	40
18	Hydrogeomorphic controls on hyporheic and riparian transport in two headwater mountain streams during base flow recession. Water Resources Research, 2016, 52, 1479-1497.	4.2	36

#	Article	IF	Citations
19	Hydrologic controls on hyporheic exchange in a headwater mountain stream. Water Resources Research, 2017, 53, 6260-6278.	4.2	34
20	Climate Change Causes River Network Contraction and Disconnection in the H.J. Andrews Experimental Forest, Oregon, USA. Frontiers in Water, 2020, 2, .	2.3	32
21	Dynamic hyporheic and riparian flow path geometry through base flow recession in two headwater mountain stream corridors. Water Resources Research, 2017, 53, 3988-4003.	4.2	31
22	Carbon dynamics in the hyporheic zone of a headwater mountain stream in the Cascade Mountains, Oregon. Water Resources Research, 2016, 52, 7556-7576.	4.2	26
23	Timeâ€Variable Transit Time Distributions in the Hyporheic Zone of a Headwater Mountain Stream. Water Resources Research, 2018, 54, 2017-2036.	4.2	23
24	Multiscale Featureâ€feature Interactions Control Patterns of Hyporheic Exchange in a Simulated Headwater Mountain Stream. Water Resources Research, 2019, 55, 10976-10992.	4.2	15
25	The Influence of Local and Nonlocal Factors on Soil Water Content in a Steep Forested Catchment. Water Resources Research, 2021, 57, e2020WR028343.	4.2	9
26	The channelâ€source hypothesis: Empirical evidence for <scp>inâ€channel</scp> sourcing of dissolved organic carbon to explain hysteresis in a headwater mountain stream. Hydrological Processes, 2022, 36, .	2.6	9
27	Discussion: â€œMeadow Restoration Increases Baseflow and Groundwater Storage in the Sierra Nevada Mountains of Californiaâ€•by Luke J.H. Hunt, Julie Fair, and Maxwell Odland. Journal of the American Water Resources Association, 2020, 56, 182-185.	2.4	6
