| #  | Article  | IF  | CITATIONS |
|----|--|-----|-----------|
| 1  | A multi-national, multi-disciplinary Delphi consensus study on using omega-3 polyunsaturated fatty<br>acids (n-3 PUFAs) for the treatment of major depressive disorder. Journal of Affective Disorders, 2020,<br>265, 233-238. | 4.1 | 12        |
| 2  | International Society for Nutritional Psychiatry Research Practice Guidelines for Omega-3 Fatty Acids in the Treatment of Major Depressive Disorder. Psychotherapy and Psychosomatics, 2019, 88, 263-273.                      | 8.8 | 114       |
| 3  | Influence of birth cohort on age of onset cluster analysis in bipolar I disorder. European Psychiatry,<br>2015, 30, 99-105.  | 0.2 | 28        |
| 4  | Molecular effects of lithium are partially mimicked by inositol-monophosphatase (IMPA)1 knockout<br>mice in a brain region-dependent manner. European Neuropsychopharmacology, 2015, 25, 425-434.                              | 0.7 | 23        |
| 5  | Inositol-Deficient Food Augments a Behavioral Effect of Long-Term Lithium Treatment Mediated by<br>Inositol Monophosphatase Inhibition. Journal of Clinical Psychopharmacology, 2015, 35, 175-177.                             | 1.4 | 3         |
| 6  | Lurasidone and Bipolar Disorder. American Journal of Psychiatry, 2014, 171, 131-133.   | 7.2 | 14        |
| 7  | Inhibition of inositol monophosphatase (IMPase) at the calbindin-D28k binding site: Molecular and behavioral aspects. European Neuropsychopharmacology, 2013, 23, 1806-1815.   | 0.7 | 9         |
| 8  | Behavioral addictions in euthymic patients with bipolar I disorder: a comparison to controls.<br>International Journal of Bipolar Disorders, 2013, 1, 27.  | 2.2 | 5         |
| 9  | The inositol monophosphatase inhibitor L-690,330 affects pilocarpine-behavior and the forced swim test. Psychopharmacology, 2013, 227, 503-508.  | 3.1 | 5         |
| 10 | Acute Intracerebroventricular Inositol Does Not Reverse the Effect of Chronic Lithium Treatment in the Forced Swim Test. Neuropsychobiology, 2013, 68, 189-192.  | 1.9 | 8         |
| 11 | Effects of lithium on lipopolysaccharide-induced inflammation in rat primary glia cells. Innate<br>Immunity, 2012, 18, 447-458.  | 2.4 | 62        |
| 12 | Individual differences and evidence-based psychopharmacology. BMC Medicine, 2012, 10, 110.   | 5.5 | 15        |
| 13 | Gene-expression studies in understanding the mechanism of action of lithium. Expert Review of Neurotherapeutics, 2012, 12, 93-97.  | 2.8 | 14        |
| 14 | Hyperhomocysteinemia does not affect global DNA methylation and nicotinamide N-methyltransferase<br>expression in mice. Journal of Psychopharmacology, 2011, 25, 976-981.  | 4.0 | 9         |
| 15 | Valnoctamide as a valproate substitute with low teratogenic potential in mania: a doubleâ€blind,<br>controlled, addâ€on clinical trial. Bipolar Disorders, 2010, 12, 376-382.  | 1.9 | 43        |
| 16 | The New Lithium Clinic. Neuropsychobiology, 2010, 62, 17-26.   | 1.9 | 16        |
| 17 | No gross abnormality of plasma homocysteine after acute methionine loading in clinically stabilized<br>patients with schizophrenia. Asian Journal of Psychiatry, 2010, 3, 64-66.   | 2.0 | 3         |
| 18 | Identification of eukaryotic elongation factor-2 as a novel cellular target of lithium and glycogen<br>synthase kinase-3. Molecular and Cellular Neurosciences, 2010, 45, 449-455.   | 2.2 | 18        |

| #  | Article   | IF   | CITATIONS |
|----|---|------|-----------|
| 19 | Subtyping Major Depressive Disorder. Psychotherapy and Psychosomatics, 2010, 79, 131-135.   | 8.8  | 103       |
| 20 | Omega 3 Fatty Acid Treatment in Autism. Journal of Child and Adolescent Psychopharmacology, 2009, 19, 449-451.  | 1.3  | 58        |
| 21 | Knockout mice in understanding the mechanism of action of lithium. Biochemical Society Transactions, 2009, 37, 1121-1125.   | 3.4  | 48        |
| 22 | Neuropsychological correlates of homocysteine levels in euthymic bipolar patients. Journal of Affective Disorders, 2008, 105, 229-233.  | 4.1  | 27        |
| 23 | No association between global leukocyte DNA methylation and homocysteine levels in schizophrenia<br>patients. Schizophrenia Research, 2008, 101, 50-57.   | 2.0  | 55        |
| 24 | Major Depressive Disorder. New England Journal of Medicine, 2008, 358, 55-68.   | 27.0 | 1,600     |
| 25 | Antidepressive-like effects of rapamycin in animal models: Implications for mTOR inhibition as a new target for treatment of affective disorders. Brain Research Bulletin, 2008, 76, 469-473.   | 3.0  | 121       |
| 26 | Glycogen synthase kinase-3β heterozygote knockout mice as a model of findings in postmortem<br>schizophrenia brain or as a model of behaviors mimicking lithium action: negative results.<br>Behavioural Pharmacology, 2008, 19, 217-224.                         | 1.7  | 38        |
| 27 | Treatment of Bipolar Depression. New England Journal of Medicine, 2007, 356, 1771-1773.   | 27.0 | 23        |
| 28 | Lithium's effect in forced-swim test is blood level dependent but not dependent on weight loss.<br>Behavioural Pharmacology, 2007, 18, 77-80.   | 1.7  | 52        |
| 29 | Mitochondrial DNA HV lineage increases the susceptibility to schizophrenia among Israeli Arabs.<br>Schizophrenia Research, 2007, 94, 354-358.   | 2.0  | 39        |
| 30 | Lithium–pilocarpine seizures as a model for lithium action in mania. Neuroscience and Biobehavioral<br>Reviews, 2007, 31, 843-849.  | 6.1  | 20        |
| 31 | P.8.a.005 Familial heritability of increased homocysteine in schizophrenia. European<br>Neuropsychopharmacology, 2006, 16, S537.  | 0.7  | 0         |
| 32 | Homocysteine-Reducing Strategies Improve Symptoms in Chronic Schizophrenic Patients with<br>Hyperhomocysteinemia. Biological Psychiatry, 2006, 60, 265-269.   | 1.3  | 117       |
| 33 | SMIT1 haploinsufficiency causes brain inositol deficiency without affecting lithium-sensitive behavior.<br>Molecular Genetics and Metabolism, 2006, 88, 384-388.  | 1.1  | 32        |
| 34 | Transmission disequilibrium and haplotype analyses of the G72/G30 locus: Suggestive linkage to<br>schizophrenia in Palestinian Arabs living in the North of Israel. American Journal of Medical Genetics<br>Part B: Neuropsychiatric Genetics, 2006, 141B, 91-95. | 1.7  | 49        |
| 35 | Omega-3 Treatment of Childhood Depression: A Controlled, Double-Blind Pilot Study. American<br>Journal of Psychiatry, 2006, 163, 1098-1100.   | 7.2  | 303       |
| 36 | Nutritional and life style determinants of plasma homocysteine in schizophrenia patients. European<br>Neuropsychopharmacology, 2005, 15, 291-295.   | 0.7  | 23        |

| #  | Article  | IF   | CITATIONS |
|----|--|------|-----------|
| 37 | High homocysteine serum levels in young male schizophrenia and bipolar patients and in an animal model. Progress in Neuro-Psychopharmacology and Biological Psychiatry, 2005, 29, 1181-1191.   | 4.8  | 52        |
| 38 | Epi-inositol is ineffective in Porsolt Forced Swim Test model of depression. Neuropsychiatric Disease and Treatment, 2005, 1, 189-190.   | 2.2  | 2         |
| 39 | Homocysteine levels in newly admitted schizophrenic patients. Journal of Psychiatric Research, 2004,<br>38, 413-416.   | 3.1  | 98        |
| 40 | Bipolar Disorder. New England Journal of Medicine, 2004, 351, 476-486.   | 27.0 | 468       |
| 41 | Lithium inhibitable enzymes in postmortem brain of bipolar patients. Journal of Psychiatric Research, 2003, 37, 433-442.   | 3.1  | 14        |
| 42 | Right prefrontal TMS versus sham treatment of mania: a controlled study. Bipolar Disorders, 2003, 5,<br>36-39.   | 1.9  | 80        |
| 43 | The effect of lithium on expression of genes for inositol biosynthetic enzymes in mouse hippocampus;<br>a comparison with the yeast model. Molecular Brain Research, 2003, 115, 104-110.   | 2.3  | 33        |
| 44 | GSK-3 and the neurodevelopmental hypothesis of schizophrenia. European Neuropsychopharmacology,<br>2002, 12, 13-25.  | 0.7  | 122       |
| 45 | Reduced inositol content in lymphocyteâ€derived cell lines from bipolar patients. Bipolar Disorders,<br>2002, 4, 67-69.  | 1.9  | 26        |
| 46 | Low GSK-3 activity in frontal cortex of schizophrenic patients. Schizophrenia Research, 2001, 52, 101-105.   | 2.0  | 130       |
| 47 | The antidepressant activity of inositol in the forced swim test involves 5-HT2 receptors. Behavioural<br>Brain Research, 2001, 118, 77-83.   | 2.2  | 58        |
| 48 | No evidence for linkage by transmission disequilibrium test analysis of microsatellite marker D22S278<br>and schizophrenia in a Palestinian Arab and in a German population. American Journal of Medical<br>Genetics Part A, 2001, 105, 328-331. | 2.4  | 3         |
| 49 | The effects of inositol treatment in animal models of psychiatric disorders. Journal of Affective Disorders, 2001, 62, 113-121.  | 4.1  | 56        |
| 50 | Nordidemnin potently inhibits inositol uptake in cultured astrocytes and dose-dependently augments<br>lithium's proconvulsant effect in vivo. , 2000, 60, 116-121.   |      | 11        |
| 51 | No association between the dopamine D3 receptorBal I polymorphism and schizophrenia in a<br>family-based study of a Palestinian Arab population. American Journal of Medical Genetics Part A, 2000,<br>96, 778-780.                              | 2.4  | 18        |
| 52 | Epi-inositol: A potential antidepressant. Drug Development Research, 2000, 50, 309-315.  | 2.9  | 4         |
| 53 | Rorschach markers in offspring of manic-depressive patients. Journal of Affective Disorders, 2000, 59, 231-236.  | 4.1  | 11        |
| 54 | Chronic treatment of human astrocytoma cells with lithium, carbamazepine or valproic acid<br>decreases inositol uptake at high inositol concentrations but increases it at low inositol<br>concentrations. Brain Research, 2000, 855, 158-161.   | 2.2  | 40        |

RH BELMAKER

| #  | Article  | IF  | CITATIONS |
|----|--|-----|-----------|
| 55 | Psychological responses in family members after the Hebron massacre. Depression and Anxiety, 1999, 9, 27-31.   | 4.1 | 29        |
| 56 | Rat brain monoamines after acute and chronic myo-inositol treatment. European<br>Neuropsychopharmacology, 1999, 10, 27-30.   | 0.7 | 7         |
| 57 | Chronic treatment with lithium and pretreatment with excess inositol reduce inositol pool size in astrocytes by different mechanisms. Brain Research, 1998, 787, 34-40.                              | 2.2 | 24        |
| 58 | Transcranial Magnetic Stimulation in Mania: A Controlled Study. American Journal of Psychiatry, 1998, 155, 1608-1610.  | 7.2 | 185       |
| 59 | S.07.05 The effects of transcranial magnetic stimulation on β-adrenergic receptors and brain monoamines. European Neuropsychopharmacology, 1997, 7, S93-S94.   | 0.7 | 0         |
| 60 | The Effects of TMS on Animal Models of Depression, β-Adrenergic Receptors, and Brain Monoamines.<br>CNS Spectrums, 1997, 2, 26-30.   | 1.2 | 24        |
| 61 | Phorbol ester intracerebroventricularly induces a behavioral hypoactivity that is not affected by chronic or acute lithium. European Neuropsychopharmacology, 1996, 6, 39-41.                        | 0.7 | 4         |
| 62 | Differential uptake of myo-inositol in vivo into rat brain areas. European Neuropsychopharmacology,<br>1996, 6, 73-75.   | 0.7 | 38        |
| 63 | Lack of effect of ECS on rat brain inositol monophosphatase activity and inositol levels and of i.c.v.<br>inositol on ictal and post-ictal length. Journal of Psychiatric Research, 1996, 30, 39-43. | 3.1 | 0         |
| 64 | TPQ in euthymic manic-depressive patients. Journal of Psychiatric Research, 1996, 30, 353-357.   | 3.1 | 78        |
| 65 | Lack of effect of 6 g inositol treatment on post-ECT cognitive function in humans. Journal of Psychiatric Research, 1995, 29, 487-489.   | 3.1 | 11        |
| 66 | The effect of transcranial magnetic stimulation of rat brain on behavioral models of depression.<br>Brain Research, 1995, 699, 130-132.  | 2.2 | 109       |
| 67 | High-dose peripheral inositol raises brain inositol levels and reverses behavioral effects of inositol depletion by lithium. Pharmacology Biochemistry and Behavior, 1994, 49, 341-343.              | 2.9 | 32        |
| 68 | Genetic markers, temperament, and psychopathology. Biological Psychiatry, 1994, 36, 71-72.   | 1.3 | 16        |
| 69 | Transcranial magnetic stimulation in depression and schizophrenia. European<br>Neuropsychopharmacology, 1994, 4, 287-288.  | 0.7 | 115       |
| 70 | CSF inositol in schizophrenia and high-dose inositol treatment of schizophrenia. European<br>Neuropsychopharmacology, 1994, 4, 487-490.  | 0.7 | 18        |
| 71 | Behavioral evidence for the existence of two pools of cellular inositol. European<br>Neuropsychopharmacology, 1994, 4, 463-467.  | 0.7 | 28        |
| 72 | The 4-dedimethylamino derivative of tetracycline loses both ability to block cyclic AMP accumulation and ability to inhibit rat motor activity. European Neuropsychopharmacology, 1994, 4, 419-420.  | 0.7 | 3         |

RH BELMAKER

| #  | Article  | IF   | CITATIONS |
|----|--|------|-----------|
| 73 | The effect of inositol on cognitive processes and mood states in normal volunteers. European<br>Neuropsychopharmacology, 1994, 4, 417.   | 0.7  | 6         |
| 74 | Inositol. European Neuropsychopharmacology, 1994, 4, 165-166.  | 0.7  | 0         |
| 75 | The effect of transcranial magnetic stimulation compared with electroconvulsive shock on rat apomorphine-induced stereotypy. European Neuropsychopharmacology, 1994, 4, 449.             | 0.7  | 28        |
| 76 | Effects of inositol on lithium-induced EEG abnormalities. European Neuropsychopharmacology, 1994,<br>4, 419.   | 0.7  | 0         |
| 77 | Species differences in susceptibility to Li-pilocarpine seizures. European Neuropsychopharmacology,<br>1994, 4, 428-429.   | 0.7  | 4         |
| 78 | Mechanism of lithium lethality in rats. Journal of Psychiatric Research, 1993, 27, 415-422.  | 3.1  | 1         |
| 79 | Inositol treatment raises CSF inositol levels. Brain Research, 1993, 627, 168-170.   | 2.2  | 68        |
| 80 | Dose-response and time curve of inositol prevention of Li-pilocarpine seizures. European<br>Neuropsychopharmacology, 1993, 3, 428-429.   | 0.7  | 12        |
| 81 | Biochemical, behavioral, and clinical studies of the role of inositol in lithium treatment and depression. Biological Psychiatry, 1993, 34, 839-852.                                     | 1.3  | 105       |
| 82 | Lack of effect of inositol treatment in chronic schizophrenia. Biological Psychiatry, 1993, 33, 673-675.   | 1.3  | 16        |
| 83 | Linkage of a normal personality trait to the color-blindness gene: preliminary evidence. Biological<br>Psychiatry, 1993, 34, 581-583.  | 1.3  | 9         |
| 84 | Raised monophosphatase activity in schizophrenic patients. Clinica Chimica Acta, 1992, 209, 89-93.   | 1.1  | 20        |
| 85 | FAILURE OF ADDITION OF LITHIUM TO IMIPRAMINE TO ENHANCE ACTIVITY IN RATS OR MOOD IN NORMAL VOLUNTEERS. Basic and Clinical Pharmacology and Toxicology, 1992, 71, 18-25.                  | 0.0  | 0         |
| 86 | Inhibition by antibiotic tetracyclines of rat cortical noradrenergic adenylate cyclase and amphetamine-induced hyperactivity. Pharmacology Biochemistry and Behavior, 1990, 37, 417-424. | 2.9  | 22        |
| 87 | Inositol-1-phosphatase in red blood cells of manic-depressive patients before and during treatment with lithium. Biological Psychiatry, 1990, 27, 552-555.                               | 1.3  | 29        |
| 88 | Lithium research: State of the art. Biological Psychiatry, 1990, 27, 1279-1281.  | 1.3  | 15        |
| 89 | Intracerebroventricularmyo-inositol antagonizes lithium-induced suppression of rearing behaviour<br>in rats. Brain Research, 1990, 534, 345-347.   | 2.2  | 38        |
| 90 | Lithium inhibits adrenergic and cholinergic increases in GTP binding in rat cortex. Nature, 1988, 331,<br>440-442.   | 27.8 | 489       |

| #  | Article   | IF  | CITATIONS |
|----|---|-----|-----------|
| 91 | Effects of lithium in vitro and ex vivo on components of the adenylate cyclase system in membranes from the cerebral cortex of the rat. Neuropharmacology, 1987, 26, 211-217.       | 4.1 | 142       |
| 92 | Interstrain correlation between behavioural effects of lithium and effects on cortical cyclic AMP.<br>Pharmacology Biochemistry and Behavior, 1986, 24, 9-13.                       | 2.9 | 36        |
| 93 | Effects of lithium in vitro on noradrenaline-induced cyclic AMP accumulation in rat cortical slices after reserpine-induced supersensitivity. Neuropharmacology, 1985, 24, 353-355. | 4.1 | 6         |
| 94 | Effect of Treatment and Withdrawal from Chronic Lithium in Rats on Stimulant-Induced Responses.<br>Neuropsychobiology, 1984, 11, 28-32.   | 1.9 | 31        |
| 95 | Rorschach Markers in Euthymic Manic-Depressive Illness. Neuropsychobiology, 1984, 12, 96-100.   | 1.9 | 12        |
| 96 | The effects of chronic lithium and ECT on A1 and A2 adenosine receptor systems in rat brain. Brain Research, 1984, 291, 188-192.  | 2.2 | 46        |
| 97 | Lack of Benefit from Magnesium in Lithium Toxicity. Neuropsychobiology, 1982, 8, 10-11.   | 1.9 | 5         |
