|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Physiological and pathophysiological roles of excitatory amino acids during central nervous system development. <i>Brain Research Reviews</i> , 1990, 15, 41-70.                                                                  | 9.0  | 1,323     |
| 2  | Neurotoxicity of N-methyl-D-aspartate is markedly enhanced in developing rat central nervous system. <i>Brain Research</i> , 1988, 459, 200-203.                                                                                  | 2.2  | 465       |
| 3  | Plasticity in the developing brain: Implications for rehabilitation. <i>Developmental Disabilities Research Reviews</i> , 2009, 15, 94-101.                                                                                       | 2.9  | 445       |
| 4  | The Developing Nervous System: A Series of Review Articles: Neurobiology of Hypoxic-Ischemic Injury in the Developing Brain. <i>Pediatric Research</i> , 2001, 49, 735-741.                                                       | 2.3  | 390       |
| 5  | Apoptosis Has a Prolonged Role in the Neurodegeneration after Hypoxic Ischemia in the Newborn Rat. <i>Journal of Neuroscience</i> , 2000, 20, 7994-8004.                                                                          | 3.6  | 388       |
| 6  | Cerebral plasticity: Windows of opportunity in the developing brain. <i>European Journal of Paediatric Neurology</i> , 2017, 21, 23-48.                                                                                           | 1.6  | 329       |
| 7  | Sensory and motor deficits in children with cerebral palsy born preterm correlate with diffusion tensor imaging abnormalities in thalamocortical pathways. <i>Developmental Medicine and Child Neurology</i> , 2009, 51, 697-704. | 2.1  | 276       |
| 8  | PARP-1 gene disruption in mice preferentially protects males from perinatal brain injury. <i>Journal of Neurochemistry</i> , 2004, 90, 1068-1075.                                                                                 | 3.9  | 266       |
| 9  | Treatment advances in neonatal neuroprotection and neurointensive care. <i>Lancet Neurology</i> , The, 2011, 10, 372-382.                                                                                                         | 10.2 | 247       |
| 10 | MK-801 protects the neonatal brain from hypoxic-ischemic damage. <i>European Journal of Pharmacology</i> , 1987, 140, 359-361.                                                                                                    | 3.5  | 244       |
| 11 | Sex and the pathogenesis of cerebral palsy. <i>Developmental Medicine and Child Neurology</i> , 2007, 49, 74-78.                                                                                                                  | 2.1  | 240       |
| 12 | Excitotoxicity in Perinatal Brain Injury. <i>Brain Pathology</i> , 2005, 15, 234-240.                                                                                                                                             | 4.1  | 235       |
| 13 | Clinical disorders of brain plasticity. <i>Brain and Development</i> , 2004, 26, 73-80.                                                                                                                                           | 1.1  | 222       |
| 14 | Altered excitatory and inhibitory amino acid receptor binding in hippocampus of patients with temporal lobe epilepsy. <i>Annals of Neurology</i> , 1991, 29, 529-541.                                                             | 5.3  | 217       |
| 15 | Hypoxic-Ischemic Encephalopathy in the Term Infant. <i>Clinics in Perinatology</i> , 2009, 36, 835-858.                                                                                                                           | 2.1  | 216       |
| 16 | Neurotransmitters and vulnerability of the developing brain. <i>Brain and Development</i> , 1995, 17, 301-306.                                                                                                                    | 1.1  | 196       |
| 17 | Magnesium reduces N- (NMDA)-mediated brain injury in perinatal rats. <i>Neuroscience Letters</i> , 1990, 109, 234-238.                                                                                                            | 2.1  | 183       |
| 18 | Plasticity and injury in the developing brain. <i>Brain and Development</i> , 2009, 31, 1-10.                                                                                                                                     | 1.1  | 177       |

| #  | ARTICLE                                                                                                                                                                                                | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Differential ontogenic development of three receptors comprising the NMDA receptor/channel complex in the rat hippocampus. <i>Experimental Neurology</i> , 1990, 110, 237-247.                         | 4.1 | 172       |
| 20 | Minocycline worsens hypoxic-ischemic brain injury in a neonatal mouse model. <i>Experimental Neurology</i> , 2004, 189, 58-65.                                                                         | 4.1 | 169       |
| 21 | Perinatal Hypoxia-Ischemia Disrupts Striatal High-Affinity [3H]Glutamate Uptake into Synaptosomes. <i>Journal of Neurochemistry</i> , 1986, 47, 1614-1619.                                             | 3.9 | 168       |
| 22 | Brief post-hypoxic-ischemic hypothermia markedly delays neonatal brain injury. <i>Brain and Development</i> , 1997, 19, 326-338.                                                                       | 1.1 | 156       |
| 23 | Neurotransmitter alterations in a model of perinatal hypoxic-ischemic brain injury. <i>Annals of Neurology</i> , 1983, 13, 511-518.                                                                    | 5.3 | 154       |
| 24 | Possible Mechanisms in Infants for Selective Basal Ganglia Damage From Asphyxia, Kernicterus, or Mitochondrial Encephalopathies. <i>Journal of Child Neurology</i> , 2000, 15, 588-591.                | 1.4 | 142       |
| 25 | Mechanisms of Hypoxic Neurodegeneration in the Developing Brain. <i>Neuroscientist</i> , 2002, 8, 212-220.                                                                                             | 3.5 | 121       |
| 26 | Ontogeny of Neurochemical Markers for Noradrenergic, GABAergic and Cholinergic Neurons in Neocortex Lesioned with Methylazoxymethanol Acetate. <i>Journal of Neurochemistry</i> , 1980, 34, 1429-1441. | 3.9 | 112       |
| 27 | Altered Development of Glutamate and GABA Receptors in the Basal Ganglia of Girls with Rett Syndrome. <i>Experimental Neurology</i> , 1999, 156, 345-352.                                              | 4.1 | 112       |
| 28 | Role of Glutamate Receptor-Mediated Excitotoxicity in Bilirubin-Induced Brain Injury in the Gunn Rat Model. <i>Experimental Neurology</i> , 1998, 150, 21-29.                                          | 4.1 | 108       |
| 29 | Neurobiology of Rett syndrome: a genetic disorder of synapse development. <i>Brain and Development</i> , 2001, 23, S206-S213.                                                                          | 1.1 | 106       |
| 30 | Susceptibility of brain to AMPA induced excitotoxicity transiently peaks during early postnatal development. <i>Brain Research</i> , 1992, 583, 54-70.                                                 | 2.2 | 99        |
| 31 | Long-term use of high-dose benzoate and dextromethorphan for the treatment of nonketotic hyperglycinemia. <i>Journal of Pediatrics</i> , 1998, 132, 709-713.                                           | 1.8 | 99        |
| 32 | Excitotoxicity in neonatal hypoxia. <i>Mental Retardation and Developmental Disabilities Research Reviews</i> , 2001, 7, 229-234.                                                                      | 3.6 | 99        |
| 33 | Development of amino acid receptors in frontal cortex from girls with Rett syndrome. <i>Annals of Neurology</i> , 1999, 45, 541-545.                                                                   | 5.3 | 98        |
| 34 | Quantitative assessment of neuroprotection against NMDA-induced brain injury. <i>Experimental Neurology</i> , 1989, 106, 289-296.                                                                      | 4.1 | 95        |
| 35 | Selective vulnerability in the neonatal brain. <i>Annals of Neurology</i> , 1998, 44, 155-156.                                                                                                         | 5.3 | 91        |
| 36 | A Diagnostic Approach for Cerebral Palsy in the Genomic Era. <i>NeuroMolecular Medicine</i> , 2014, 16, 821-844.                                                                                       | 3.4 | 89        |

| #  | ARTICLE                                                                                                                                                                                                                                             | IF  | CITATIONS |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | The glutamate analogue quisqualic acid is neurotoxic in striatum and hippocampus of immature rat brain. <i>Neuroscience Letters</i> , 1986, 71, 13-18.                                                                                              | 2.1 | 88        |
| 38 | Neuroprotective effects of MK-801, TCP, PCP and CPP against N-methyl-d-aspartate induced neurotoxicity in an in vivo perinatal rat model. <i>Brain Research</i> , 1989, 490, 33-40.                                                                 | 2.2 | 85        |
| 39 | Hypoxic-ischemic Brain Injury in the Newborn. <i>Clinics in Perinatology</i> , 1997, 24, 627-654.                                                                                                                                                   | 2.1 | 85        |
| 40 | Dextromethorphan and high-dose benzoate therapy for nonketotic hyperglycinemia in an infant. <i>Journal of Pediatrics</i> , 1992, 121, 131-135.                                                                                                     | 1.8 | 84        |
| 41 | Mouse model of intrauterine inflammation: Sex-specific differences in long-term neurologic and immune sequelae. <i>Brain, Behavior, and Immunity</i> , 2014, 38, 142-150.                                                                           | 4.1 | 74        |
| 42 | Perinatal Hypoxic-Ischemic Brain Injury Enhances Quisqualic Acid-Stimulated Phosphoinositide Turnover. <i>Journal of Neurochemistry</i> , 1988, 51, 353-359.                                                                                        | 3.9 | 72        |
| 43 | Protective effect of erythropoietin in neonatal hypoxic ischemia in mice. <i>NeuroReport</i> , 2003, 14, 1757-1761.                                                                                                                                 | 1.2 | 72        |
| 44 | Hypoxia-ischemia produces focal disruption of glutamate receptors in developing brain. <i>Developmental Brain Research</i> , 1987, 34, 33-39.                                                                                                       | 1.7 | 67        |
| 45 | A pilot cohort study of cerebral autoregulation and 2-year neurodevelopmental outcomes in neonates with hypoxic-ischemic encephalopathy who received therapeutic hypothermia. <i>BMC Neurology</i> , 2015, 15, 209.                                 | 1.8 | 67        |
| 46 | Generation-6 hydroxyl PAMAM dendrimers improve CNS penetration from intravenous administration in a large animal brain injury model. <i>Journal of Controlled Release</i> , 2017, 249, 173-182.                                                     | 9.9 | 67        |
| 47 | In Vitro and In Vivo Pharmacology of trans-and cis-( $\pm$ )-1-Amino-1,3-Cyclopentanedicarboxylic Acid: Dissociation of Metabotropic and Ionotropic Excitatory Amino Acid Receptor Effects. <i>Journal of Neurochemistry</i> , 1991, 56, 1789-1796. | 3.9 | 65        |
| 48 | Glutamate recognition sites in human fetal brain. <i>Neuroscience Letters</i> , 1988, 84, 131-136.                                                                                                                                                  | 2.1 | 63        |
| 49 | Hypoxic and ischemic disorders of infants and children. Lecture for 38th Meeting of Japanese Society of Child Neurology, Tokyo, Japan, July 1996. <i>Brain and Development</i> , 1997, 19, 235-239.                                                 | 1.1 | 62        |
