#	ARTICLE	IF	CITATIONS
1	Simulation Study of Confounder-Selection Strategies. American Journal of Epidemiology, 1993, 138, 923-936.	3.4	2,124
2	Good practices for quantitative bias analysis. International Journal of Epidemiology, 2014, 43, 1969-1985.	1.9	417
3	Proper interpretation of non-differential misclassification effects: expectations vs observations. International Journal of Epidemiology, 2005, 34, 680-687.	1.9	295
4	Estimating causal effects. International Journal of Epidemiology, 2002, 31, 422-429.	1.9	264
5	Can landscape ecology untangle the complexity of antibiotic resistance?. Nature Reviews Microbiology, 2006, 4, 943-952.	28.6	144
6	Brief Report. International Journal of Epidemiology, 2008, 37, 382-385.	1.9	122
7	Estimating causal effects. International Journal of Epidemiology, 2002, 31, 422-9.	1.9	108
8	Exposure-measurement error is frequently ignored when interpreting epidemiologic study results. European Journal of Epidemiology, 2007, 21, 871-876.	5.7	78
9	Injury from Dairy Cattle Activities. Epidemiology, 1997, 8, 37-41.	2.7	74
10	Interpreting Model Coefficients When the True Model Form Is Unknown. Epidemiology, 1993, 4, 310-318.	2.7	55
11	The interpretation of multiplicative-model parameters as standardized parameters. Statistics in Medicine, 1994, 13, 989-999.	1.6	46
12	Alternative approaches to analytical designs in occupational injury epidemiology. , 1997, 32, 129-141.		37
13	Occupational exposure to glycol ethers and human congenital malformations. International Archives of Occupational and Environmental Health, 2003, 76, 405-423.	2.3	35
14	A Comparison of the Performance of Model-Based Confidence Intervals When the Correct Model Form Is Unknown. Epidemiology, 1994, 5, 171-182.	2.7	25
15	The role of counterfactual theory in causal reasoning. Annals of Epidemiology, 2016, 26, 681-682.	1.9	13
16	Uncertainty analysis: an example of its application to estimating a survey proportion. Journal of Epidemiology and Community Health, 2007, 61, 650-654.	3.7	12
17	Specifying exposure classification parameters for sensitivity analysis: family breast cancer history. Clinical Epidemiology, 2009, 1, 109.	3.0	9
18	Inference on Collapsibility in Generalized Linear Models. Biometrical Journal, 1994, 36, 771-782.	1.0	7

#	ARTICLE	IF	CITATIONS
19	The Effect of Uncertainty in Exposure Estimation on the Exposure-Response Relation between 1,3-Butadiene and Leukemia. <i>International Journal of Environmental Research and Public Health</i> , 2009, 6, 2436-2455.	2.6	6
20	Quantitative bias analysis in an asthma study of rescue-recovery workers and volunteers from the 9/11 World Trade Center attacks. <i>Annals of Epidemiology</i> , 2016, 26, 794-801.	1.9	6
21	Update: Greenland and Robins (1986). Identifiability, exchangeability and epidemiological confounding. <i>Epidemiologic Perspectives and Innovations</i> , 2009, 6, 3.	7.0	5
22	Editorial: Wishful thinking. <i>Epidemiologic Perspectives and Innovations</i> , 2004, 1, 2.	7.0	4
23	Quantifying and Adjusting for Disease Misclassification Due to Loss to Follow-Up in Historical Cohort Mortality Studies. <i>International Journal of Environmental Research and Public Health</i> , 2015, 12, 12834-12846.	2.6	4
24	Re: "Estimating Causal Associations of Fine Particles With Daily Deaths in Boston" • <i>American Journal of Epidemiology</i> , 2016, 183, 594-594.	3.4	4
25	Causal reasoning in epidemiology: Philosophy and logic. <i>Global Epidemiology</i> , 2020, 2, 100020.	1.5	3
26	Interpreting Epidemiological Studies. <i>Advances in Chemistry Series</i> , 1994, , 29-38.	0.6	0
