#	ARTICLE	IF	CITATIONS
1	Potential roles for DNA replication and repair functions in cell killing by streptomycin. <i>Mutation Research - Fundamental and Molecular Mechanisms of Mutagenesis</i> , 2013, 749, 87-91.	1.0	2
2	SOS induction and mutagenesis by dnaQ missense alleles in wild type cells. <i>Mutation Research - Fundamental and Molecular Mechanisms of Mutagenesis</i> , 2012, 735, 46-50.	1.0	8
3	Hypermutagenesis in mutA cells is mediated by mistranslational corruption of polymerase, and is accompanied by replication fork collapse. <i>Molecular Microbiology</i> , 2006, 62, 1752-1763.	2.5	25
4	Specificity of spontaneous mutations induced in mutA mutator cells. <i>Mutation Research - Fundamental and Molecular Mechanisms of Mutagenesis</i> , 2004, 548, 9-18.	1.0	10
5	Escherichia coli Cells Bearing a Ribosomal Ambiguity Mutation in rpsD Have a Mutator Phenotype That Correlates with Increased Mistranslation. <i>Journal of Bacteriology</i> , 2003, 185, 5015-5018.	2.2	25
6	DNA Polymerase III from Escherichia coli Cells Expressing mutA Mistranslator tRNA Is Error-prone. <i>Journal of Biological Chemistry</i> , 2002, 277, 46319-46327.	3.4	21
7	Mistranslation induced by streptomycin provokes a RecABC/RuvABC-dependent mutator phenotype in Escherichia coli cells 1 Edited by M. Gottesman. <i>Journal of Molecular Biology</i> , 2002, 315, 513-527.	4.2	46
8	Escherichia coli cells defective for the recN gene display constitutive elevation of mutagenesis at 3,N4-ethenocytosine via an SOS-induced mechanism. <i>Molecular Microbiology</i> , 2002, 37, 680-686.	2.5	10
9	Expression of mutant alanine tRNAs increases spontaneous mutagenesis in Escherichia coli. <i>Molecular Microbiology</i> , 2002, 44, 131-141.	2.5	20
10	The Escherichia coli UVM response is accompanied by an SOS-independent error-prone DNA replication activity demonstrable in vitro. <i>Molecular Microbiology</i> , 2000, 38, 368-380.	2.5	10
11	Requirement for Homologous Recombination Functions for Expression of the mutA Mistranslator tRNA-Induced Mutator Phenotype in Escherichia coli. <i>Journal of Bacteriology</i> , 2000, 182, 1427-1431.	2.2	11
12	The mutA mistranslator tRNA-induced mutator phenotype requires recA and recB genes, but not the derepression of lexA-regulated functions. <i>Molecular Microbiology</i> , 1999, 32, 607-615.	2.5	17
13	Escherichia coli cells bearing mutA, a mutant glyV tRNA gene, express a recA-dependent error-prone DNA replication activity. <i>Molecular Microbiology</i> , 1999, 33, 732-740.	2.5	21
14	Escherichia coli Cells Exposed to Streptomycin Display a Mutator Phenotype. <i>Journal of Bacteriology</i> , 1999, 181, 1043-1044.	2.2	52
15	SOS and UVM Pathways Have Lesion-Specific Additive and Competing Effects on Mutation Fixation at Replication-Blocking DNA Lesions. <i>Journal of Bacteriology</i> , 1999, 181, 1515-1523.	2.2	12
16	SOS and Mayday: multiple inducible mutagenic pathways in Escherichia coli. <i>Molecular Microbiology</i> , 1998, 30, 905-910.	2.5	86
17	Effect of UVM induction on mutation fixation at non-pairing and mispairing DNA lesions. <i>Molecular Microbiology</i> , 1996, 22, 747-755.	2.5	13
18	UV irradiation of Escherichia coli modulates mutagenesis at a site-specific ethenocytosine residue on M13 DNA. Evidence for an inducible recA-independent effect. <i>Biochemistry</i> , 1993, 32, 4112-4120.	2.5	35

#	ARTICLE	IF	CITATIONS
19	Quantitative multiplex sequence analysis of mutational hot spots. Frequency and specificity of mutations induced by a site-specific ethenocytosine in M13 viral DNA. <i>Biochemistry</i> , 1993, 32, 4105-4111.	2.5	58
20	Mechanisms of mutagenesis by exocyclic DNA adducts. Transfection of M13 viral DNA bearing a site-specific adduct shows that ethenocytosine is a highly efficient RecA-independent mutagenic noninstructional lesion. <i>Biochemistry</i> , 1991, 30, 8736-8743.	2.5	84
