#	ARTICLE	IF	CITATIONS
1	Fixations to the eyes aids in facial encoding; covertly attending to the eyes does not. <i>Acta Psychologica</i> , 2017, 173, 55-65.	1.5	14
2	If not When, then Where? Ignoring Temporal Information Eliminates Reflexive but not Volitional Spatial Orienting. <i>Vision (Switzerland)</i> , 2017, 1, 12.	1.2	7
3	Camouflaged attention: covert attention is critical to social communication in natural settings. <i>Evolution and Human Behavior</i> , 2016, 37, 449-455.	2.2	24
4	Eye contact affects attention more than arousal as revealed by prospective time estimation. <i>Attention, Perception, and Psychophysics</i> , 2016, 78, 1302-1307.	1.3	8
5	Looking away: distractor influences on saccadic trajectory and endpoint in prosaccade and antisaccade tasks. <i>Experimental Brain Research</i> , 2016, 234, 1637-1648.	1.5	1
6	A fresh look at saccadic trajectories and task irrelevant stimuli: Social relevance matters. <i>Vision Research</i> , 2015, 111, 82-90.	1.4	13
7	Recurrence quantification analysis of eye movements. <i>Behavior Research Methods</i> , 2013, 45, 842-856.	4.0	112
8	A new look at social attention: Orienting to the eyes is not (entirely) under volitional control.. <i>Journal of Experimental Psychology: Human Perception and Performance</i> , 2012, 38, 1132-1143.	0.9	44
9	Social attention with real versus reel stimuli: toward an empirical approach to concerns about ecological validity. <i>Frontiers in Human Neuroscience</i> , 2012, 6, 143.	2.0	223
10	Potential social interactions are important to social attention. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2011, 108, 5548-5553.	7.1	227
11	Reflexive orienting to gaze is not luminance dependent. <i>Attention, Perception, and Psychophysics</i> , 2010, 72, 28-32.	1.3	1
12	The time course of vertical, horizontal and oblique saccade trajectories: Evidence for greater distractor interference during vertical saccades. <i>Vision Research</i> , 2010, 50, 829-837.	1.4	16
