#	ARTICLE	IF	CITATIONS
1	Association of Trypanolytic ApoL1 Variants with Kidney Disease in African Americans. <i>Science</i> , 2010, 329, 841-845.	12.6	1,725
2	VEGF Inhibition and Renal Thrombotic Microangiopathy. <i>New England Journal of Medicine</i> , 2008, 358, 1129-1136.	27.0	1,348
3	Enzyme Replacement Therapy in Fabry Disease. <i>JAMA - Journal of the American Medical Association</i> , 2001, 285, 2743.	7.4	1,141
4	Identification of Renox, an NAD(P)H oxidase in kidney. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2000, 97, 8010-8014.	7.1	751
5	APOL1 Genetic Variants in Focal Segmental Glomerulosclerosis and HIV-Associated Nephropathy. <i>Journal of the American Society of Nephrology: JASN</i> , 2011, 22, 2129-2137.	6.1	713
6	<i>APOL1</i> Risk Variants, Race, and Progression of Chronic Kidney Disease. <i>New England Journal of Medicine</i> , 2013, 369, 2183-2196.	27.0	654
7	MYH9 is a major-effect risk gene for focal segmental glomerulosclerosis. <i>Nature Genetics</i> , 2008, 40, 1175-1184.	21.4	636
8	Hepatic expression of mature transforming growth factor beta 1 in transgenic mice results in multiple tissue lesions.. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 1995, 92, 2572-2576.	7.1	635
9	Apoptosis in podocytes induced by TGF- β 2 and Smad7. <i>Journal of Clinical Investigation</i> , 2001, 108, 807-816.	8.2	534
10	TGF- β 2 and fibrosis. <i>Microbes and Infection</i> , 1999, 1, 1349-1365.	1.9	531
11	Metabolomics Reveals Signature of Mitochondrial Dysfunction in Diabetic Kidney Disease. <i>Journal of the American Society of Nephrology: JASN</i> , 2013, 24, 1901-1912.	6.1	454
12	CD2-Associated Protein Haploinsufficiency Is Linked to Glomerular Disease Susceptibility. <i>Science</i> , 2003, 300, 1298-1300.	12.6	435
13	Natural History of Fabry Renal Disease. <i>Medicine (United States)</i> , 2002, 81, 122-138.	1.0	400
14	The Notch pathway in podocytes plays a role in the development of glomerular disease. <i>Nature Medicine</i> , 2008, 14, 290-298.	30.7	368
15	Rapid isolation of urinary exosomal biomarkers using a nanomembrane ultrafiltration concentrator. <i>American Journal of Physiology - Renal Physiology</i> , 2007, 292, F1657-F1661.	2.7	367
16	Enabling the genomic revolution in Africa. <i>Science</i> , 2014, 344, 1346-1348.	12.6	361
17	Focal Segmental Glomerulosclerosis. <i>Clinical Journal of the American Society of Nephrology: CJASN</i> , 2017, 12, 502-517.	4.5	359
18	Crystalluria and Urinary Tract Abnormalities Associated with Indinavir. <i>Annals of Internal Medicine</i> , 1997, 127, 119.	3.9	282

#	ARTICLE	IF	CITATIONS
19	Transgenic expression of human APOL1 risk variants in podocytes induces kidney disease in mice. <i>Nature Medicine</i> , 2017, 23, 429-438.	30.7	282
20	Innate immunity pathways regulate the nephropathy gene Apolipoprotein L1. <i>Kidney International</i> , 2015, 87, 332-342.	5.2	278
21	Design of the Nephrotic Syndrome Study Network (NEPTUNE) to evaluate primary glomerular nephropathy by a multidisciplinary approach. <i>Kidney International</i> , 2013, 83, 749-756.	5.2	268
22	Pirfenidone for Diabetic Nephropathy. <i>Journal of the American Society of Nephrology: JASN</i> , 2011, 22, 1144-1151.	6.1	257
23	APOL1 Risk Variants Are Strongly Associated with HIV-Associated Nephropathy in Black South Africans. <i>Journal of the American Society of Nephrology: JASN</i> , 2015, 26, 2882-2890.	6.1	256
24	The Apolipoprotein L1 (APOL1) Gene and Nondiabetic Nephropathy in African Americans. <i>Journal of the American Society of Nephrology: JASN</i> , 2010, 21, 1422-1426.	6.1	242
25	Urinary exosomal transcription factors, a new class of biomarkers for renal disease. <i>Kidney International</i> , 2008, 74, 613-621.	5.2	238
26	Podocytopathies. <i>Nature Reviews Disease Primers</i> , 2020, 6, 68.	30.5	237
27	Arhgap24 inactivates Rac1 in mouse podocytes, and a mutant form is associated with familial focal segmental glomerulosclerosis. <i>Journal of Clinical Investigation</i> , 2011, 121, 4127-4137.	8.2	234
28	Podocytes use FcRn to clear IgG from the glomerular basement membrane. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2008, 105, 967-972.	7.1	233
29	SGLT2 Protein Expression Is Increased in Human Diabetic Nephropathy. <i>Journal of Biological Chemistry</i> , 2017, 292, 5335-5348.	3.4	231
30	Twenty-one-year trend in ESRD due to focal segmental glomerulosclerosis in the United States. <i>American Journal of Kidney Diseases</i> , 2004, 44, 815-825.	1.9	230
31	A Proposed Taxonomy for the Podocytopathies: A Reassessment of the Primary Nephrotic Diseases. <i>Clinical Journal of the American Society of Nephrology: CJASN</i> , 2007, 2, 529-542.	4.5	222
32	Redefined clinical features and diagnostic criteria in autoimmune polyendocrinopathy-candidiasis-ectodermal dystrophy. <i>JCI Insight</i> , 2016, 1, .	5.0	219
33	The HIV-1 Virion-associated Protein Vpr Is a Coactivator of the Human Glucocorticoid Receptor. <i>Journal of Experimental Medicine</i> , 1999, 189, 51-62.	8.5	211
34	Apolipoprotein L1 gene variants associate with hypertension-attributed nephropathy and the rate of kidney function decline in African Americans. <i>Kidney International</i> , 2013, 83, 114-120.	5.2	210
35	Renal Pathology in Fabry Disease. <i>Journal of the American Society of Nephrology: JASN</i> , 2002, 13, S134-S138.	6.1	206
36	Epidermal growth factor receptor promotes glomerular injury and renal failure in rapidly progressive crescentic glomerulonephritis. <i>Nature Medicine</i> , 2011, 17, 1242-1250.	30.7	204

#	ARTICLE	IF	CITATIONS
37	Long-term sun exposure alters the collagen of the papillary dermis. <i>Journal of the American Academy of Dermatology</i> , 1996, 34, 209-218.	1.2	202
38	Pirfenidone Slows Renal Function Decline in Patients with Focal Segmental Glomerulosclerosis. <i>Clinical Journal of the American Society of Nephrology: CJASN</i> , 2007, 2, 906-913.	4.5	186
39	Evolution of the primate trypanolytic factor APOL1. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2014, 111, E2130-9.	7.1	183
40	A tripartite complex of suPAR, APOL1 risk variants and α 3 integrin on podocytes mediates chronic kidney disease. <i>Nature Medicine</i> , 2017, 23, 945-953.	30.7	176
41	Gut microbiome-derived phenyl sulfate contributes to albuminuria in diabetic kidney disease. <i>Nature Communications</i> , 2019, 10, 1835.	12.8	173
42	Mice Lacking the p53-Effector Gene Gadd45a Develop a Lupus-Like Syndrome. <i>Immunity</i> , 2002, 16, 499-508.	14.3	170
43	Connective Tissue Growth Factor Expressed in Tubular Epithelium Plays a Pivotal Role in Renal Fibrogenesis. <i>Journal of the American Society of Nephrology: JASN</i> , 2005, 16, 133-143.	6.1	170
44	Whole Exome Sequencing of Patients with Steroid-Resistant Nephrotic Syndrome. <i>Clinical Journal of the American Society of Nephrology: CJASN</i> , 2018, 13, 53-62.	4.5	170
45	Advanced Glycation End-Products Induce Tubular CTGF via TGF- β -Independent Smad3 Signaling. <i>Journal of the American Society of Nephrology: JASN</i> , 2010, 21, 249-260.	6.1	168
46	Polymorphisms in the non-muscle myosin heavy chain 9 gene (MYH9) are strongly associated with end-stage renal disease historically attributed to hypertension in African Americans. <i>Kidney International</i> , 2009, 75, 736-745.	5.2	166
47	Induction of nephrogenic mesenchyme by osteogenic protein 1 (bone morphogenetic protein 7).. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 1996, 93, 9021-9026.	7.1	165
48	Overexpression of VEGF-A in podocytes of adult mice causes glomerular disease. <i>Kidney International</i> , 2010, 77, 989-999.	5.2	162
49	APOL1 Kidney Risk Alleles: Population Genetics and Disease Associations. <i>Advances in Chronic Kidney Disease</i> , 2014, 21, 426-433.	1.4	158
50	Trends in the epidemiology of focal segmental glomerulosclerosis. <i>Seminars in Nephrology</i> , 2003, 23, 172-182.	1.6	157
51	Renal Bone Morphogenetic Protein-7 Protects against Diabetic Nephropathy. <i>Journal of the American Society of Nephrology: JASN</i> , 2006, 17, 2504-2512.	6.1	156
52	Mouse models of MYH9-related disease: mutations in nonmuscle myosin II-A. <i>Blood</i> , 2012, 119, 238-250.	1.4	151
53	Diabetic Nephropathy Is Accelerated by Farnesoid X Receptor Deficiency and Inhibited by Farnesoid X Receptor Activation in a Type 1 Diabetes Model. <i>Diabetes</i> , 2010, 59, 2916-2927.	0.6	149
54	miR-150 Promotes Renal Fibrosis in Lupus Nephritis by Downregulating SOCS1. <i>Journal of the American Society of Nephrology: JASN</i> , 2013, 24, 1073-1087.	6.1	149

#	ARTICLE	IF	CITATIONS
55	An eQTL Landscape of Kidney Tissue in Human Nephrotic Syndrome. <i>American Journal of Human Genetics</i> , 2018, 103, 232-244.	6.2	147
56	HIV-associated nephropathies: epidemiology, pathology, mechanisms and treatment. <i>Nature Reviews Nephrology</i> , 2015, 11, 150-160.	9.6	142
57	G Protein-Coupled Bile Acid Receptor TGR5 Activation Inhibits Kidney Disease in Obesity and Diabetes. <i>Journal of the American Society of Nephrology: JASN</i> , 2016, 27, 1362-1378.	6.1	140
58	Angiotensin II overcomes strain-dependent resistance of rapid CKD progression in a new remnant kidney mouse model. <i>Kidney International</i> , 2010, 78, 1136-1153.	5.2	139
59	FXR/TGR5 Dual Agonist Prevents Progression of Nephropathy in Diabetes and Obesity. <i>Journal of the American Society of Nephrology: JASN</i> , 2018, 29, 118-137.	6.1	133
60	Chronic kidney disease worsens sepsis and sepsis-induced acute kidney injury by releasing High Mobility Group Box Protein-1. <i>Kidney International</i> , 2011, 80, 1198-1211.	5.2	130
61	Hepatocyte growth factor counteracts transforming growth factor- β 1, through attenuation of connective tissue growth factor induction, and prevents renal fibrogenesis in 5/6 nephrectomized mice. <i>FASEB Journal</i> , 2003, 17, 268-270.	0.5	128
62	Prospective study of alcoholism treatment. <i>American Journal of Medicine</i> , 1983, 75, 455-463.	1.5	125
63	APOL1 Kidney Disease Risk Variants: An Evolving Landscape. <i>Seminars in Nephrology</i> , 2015, 35, 222-236.	1.6	125
64	Transport of phosphorothioate oligonucleotides in kidney: Implications for molecular therapy. <i>Kidney International</i> , 1995, 47, 1462-1469.	5.2	124
65	Mutations in the Gene That Encodes the F-Actin Binding Protein Anillin Cause FSGS. <i>Journal of the American Society of Nephrology: JASN</i> , 2014, 25, 1991-2002.	6.1	124
66	Molecular Identification of SV40 Infection in Human Subjects and Possible Association with Kidney Disease. <i>Journal of the American Society of Nephrology: JASN</i> , 2002, 13, 2320-2330.	6.1	123
67	Bioenergetic characterization of mouse podocytes. <i>American Journal of Physiology - Cell Physiology</i> , 2010, 299, C464-C476.	4.6	123
68	Twenty-one-year trend in ESRD due to focal segmental glomerulosclerosis in the United States. <i>American Journal of Kidney Diseases</i> , 2004, 44, 815-25.	1.9	120
69	Parvovirus B19 dna in kidney tissue of patients with focal segmental glomerulosclerosis. <i>American Journal of Kidney Diseases</i> , 2000, 35, 1166-1174.	1.9	116
70	Renal Expression of Fibrotic Matrix Proteins and of Transforming Growth Factor- β 2 (TGF- β 2) Isoforms in TGF- β 2 Transgenic Mice. <i>Journal of the American Society of Nephrology: JASN</i> , 1999, 10, 271-280.	6.1	116
71	APOL1 Genotype and Race Differences in Incident Albuminuria and Renal Function Decline. <i>Journal of the American Society of Nephrology: JASN</i> , 2016, 27, 887-893.	6.1	115
72	APOL1-Associated Nephropathy: A Key Contributor to Racial Disparities in CKD. <i>American Journal of Kidney Diseases</i> , 2018, 72, S8-S16.	1.9	113

#	ARTICLE	IF	CITATIONS
73	Role of angiotensin II in the expression and regulation of transforming growth factor- β 2 in obstructive nephropathy. <i>Kidney International</i> , 1995, 48, 1233-1246.	5.2	112
74	Nuclear Factor- κ B Inhibitors as Potential Novel Anti-Inflammatory Agents for the Treatment of Immune Glomerulonephritis. <i>American Journal of Pathology</i> , 2002, 161, 1497-1505.	3.8	111
75	APOL1 Genotype and Renal Function of Black Living Donors. <i>Journal of the American Society of Nephrology: JASN</i> , 2018, 29, 1309-1316.	6.1	111
76	BK virus and SV40 co-infection in polyomavirus nephropathy1. <i>Transplantation</i> , 2002, 74, 1497-1504.	1.0	110
77	Integrative Genomics Identifies Novel Associations with APOL1 Risk Genotypes in Black NEPTUNE Subjects. <i>Journal of the American Society of Nephrology: JASN</i> , 2016, 27, 814-823.	6.1	110
78	In vitro models of TGF- β 2-induced fibrosis suitable for high-throughput screening of antifibrotic agents. <i>American Journal of Physiology - Renal Physiology</i> , 2007, 293, F631-F640.	2.7	108
79	PPAR α and Sirt1 Mediate Erythropoietin Action in Increasing Metabolic Activity and Browning of White Adipocytes to Protect Against Obesity and Metabolic Disorders. <i>Diabetes</i> , 2013, 62, 4122-4131.	0.6	108
80	Parvovirus B19 and the Kidney: Table 1.. <i>Clinical Journal of the American Society of Nephrology: CJASN</i> , 2007, 2, S47-S56.	4.5	105
81	Clinical Features and Histology of Apolipoprotein L1-Associated Nephropathy in the FSGS Clinical Trial. <i>Journal of the American Society of Nephrology: JASN</i> , 2015, 26, 1443-1448.	6.1	104
82	Angiotensin II receptor-mediated proliferation of cultured human fetal mesangial cells. <i>Kidney International</i> , 1991, 40, 764-771.	5.2	102
83	Functional and Structural Characterization of Synthetic HIV-1 Vpr That Transduces Cells, Localizes to the Nucleus, and Induces G2 Cell Cycle Arrest. <i>Journal of Biological Chemistry</i> , 2000, 275, 32016-32026.	3.4	102
84	Changes in apatite crystal size in bones of patients with osteogenesis imperfecta. <i>Calcified Tissue International</i> , 1991, 49, 248-250.	3.1	101
85	De novo expression of podocyte proteins in parietal epithelial cells during experimental glomerular disease. <i>American Journal of Physiology - Renal Physiology</i> , 2010, 298, F702-F711.	2.7	100
86	Natural History and Treatment of Renal Involvement in Fabry Disease. <i>Journal of the American Society of Nephrology: JASN</i> , 2002, 13, S139-S143.	6.1	97
87	Recent Progress in the Pathophysiology and Treatment of FSGS Recurrence. <i>American Journal of Transplantation</i> , 2013, 13, 266-274.	4.7	97
88	Urinary exosomal Wilms' tumor-1 as a potential biomarker for podocyte injury. <i>American Journal of Physiology - Renal Physiology</i> , 2013, 305, F553-F559.	2.7	96
89	COVID-19-associated Collapsing Glomerulopathy: An Emerging Entity. <i>Kidney International Reports</i> , 2020, 5, 759-761.	0.8	96
90	Comparison of Parathyroid Hormone Assays with Bone Histomorphometry in Renal Osteodystrophy*. <i>Journal of Clinical Endocrinology and Metabolism</i> , 1986, 63, 1163-1169.	3.6	95

#	ARTICLE	IF	CITATIONS
91	Early Deposition of Aluminum in Bone in Diabetic Patients on Hemodialysis. <i>New England Journal of Medicine</i> , 1987, 316, 292-296.	27.0	95
92	Non-muscle myosin heavy chain 9 gene MYH9 associations in African Americans with clinically diagnosed type 2 diabetes mellitus-associated ESRD. <i>Nephrology Dialysis Transplantation</i> , 2009, 24, 3366-3371.	0.7	95
93	Ageing accentuates and bone marrow transplantation ameliorates metabolic defects in Fabry disease mice. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 1999, 96, 6423-6427.	7.1	91
94	Missed dialysis sessions and hospitalization in hemodialysis patients after Hurricane Katrina. <i>Kidney International</i> , 2009, 75, 1202-1208.	5.2	91
95	Lipid biology of the podocyte—new perspectives offer new opportunities. <i>Nature Reviews Nephrology</i> , 2014, 10, 379-388.	9.6	91
96	Glomerular hypertrophy is associated with hyperinsulinemia and precedes overt diabetes in aging rhesus monkeys. <i>American Journal of Kidney Diseases</i> , 2002, 40, 1075-1085.	1.9	88
97	HIV-associated nephropathy in African Americans [The content of this publication does not necessarily reflect the views or policies of the Department of Health and Human Services, nor does mention of trade names, commercial products, or organizations imply endorsement by the U.S. Government. The publisher or recipient acknowledges right of the U.S. Government to retain a nonexclusive, royalty-free license in and to any copyright covering the article.]. <i>Kidney International</i> , 2003, 63, S43-S49.	5.2	88
98	Advances in the Biology and Genetics of the Podocytopathies: Implications for Diagnosis and Therapy. <i>Archives of Pathology and Laboratory Medicine</i> , 2009, 133, 201-216.	2.5	87
99	Circulating and urinary microRNA profile in focal segmental glomerulosclerosis: a pilot study. <i>European Journal of Clinical Investigation</i> , 2015, 45, 394-404.	3.4	86
100	Pirfenidone: an anti-fibrotic therapy for progressive kidney disease. <i>Expert Opinion on Investigational Drugs</i> , 2010, 19, 275-283.	4.1	85
101	Lack of A1 Adenosine Receptors Augments Diabetic Hyperfiltration and Glomerular Injury. <i>Journal of the American Society of Nephrology: JASN</i> , 2008, 19, 722-730.	6.1	84
102	NPHS2 gene, nephrotic syndrome and focal segmental glomerulosclerosis: A HuGE review. <i>Genetics in Medicine</i> , 2006, 8, 63-75.	2.4	83
103	Pathogenesis and Treatment of HIV-Associated Renal Diseases: Lessons from Clinical and Animal Studies, Molecular Pathologic Correlations, and Genetic Investigations. <i>Annals of Internal Medicine</i> , 2003, 139, 214.	3.9	82
104	Differential Effects of MYH9 and APOL1 Risk Variants on FRMD3 Association with Diabetic ESRD in African Americans. <i>PLoS Genetics</i> , 2011, 7, e1002150.	3.5	81
105	Interferon lambda promotes immune dysregulation and tissue inflammation in TLR7-induced lupus. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2020, 117, 5409-5419.	7.1	81
106	Lsh, a SNF2 family member, is required for normal murine development. <i>Biochimica Et Biophysica Acta - General Subjects</i> , 2001, 1526, 211-220.	2.4	80
107	Digital Pathology Evaluation in the Multicenter Nephrotic Syndrome Study Network (NEPTUNE). <i>Clinical Journal of the American Society of Nephrology: CJASN</i> , 2013, 8, 1449-1459.	4.5	80
108	Sickle Cell Trait and the Risk of ESRD in Blacks. <i>Journal of the American Society of Nephrology: JASN</i> , 2017, 28, 2180-2187.	6.1	79

#	ARTICLE	IF	CITATIONS
109	bFGF and its low affinity receptors in the pathogenesis of HIV-associated nephropathy in transgenic mice. <i>Kidney International</i> , 1994, 46, 759-772.	5.2	78
110	TGF- β 1 stimulates mitochondrial oxidative phosphorylation and generation of reactive oxygen species in cultured mouse podocytes, mediated in part by the mTOR pathway. <i>American Journal of Physiology - Renal Physiology</i> , 2013, 305, F1477-F1490.	2.7	78
111	Podocyte Injury Caused by Indoxyl Sulfate, a Uremic Toxin and Aryl-Hydrocarbon Receptor Ligand. <i>PLoS ONE</i> , 2014, 9, e108448.	2.5	77
