citing authors

#	ARTICLE	IF	CITATIONS
1	The Human Microcirculation. <i>Circulation Research</i> , 2016, 118, 157-172.	4.5	222
2	Interference with PPAR $\beta$ Function in Smooth Muscle Causes Vascular Dysfunction and Hypertension. <i>Cell Metabolism</i> , 2008, 7, 215-226.	16.2	153
3	Ceramide Changes the Mediator of Flow-Induced Vasodilation From Nitric Oxide to Hydrogen Peroxide in the Human Microcirculation. <i>Circulation Research</i> , 2014, 115, 525-532.	4.5	105
4	Interference With PPAR $\beta$ Signaling Causes Cerebral Vascular Dysfunction, Hypertrophy, and Remodeling. <i>Hypertension</i> , 2008, 51, 867-871.	2.7	104
5	Endothelium-Specific Interference With Peroxisome Proliferator Activated Receptor Gamma Causes Cerebral Vascular Dysfunction in Response to a High-Fat Diet. <i>Circulation Research</i> , 2008, 103, 654-661.	4.5	89
6	Critical Role for Telomerase in the Mechanism of Flow-Mediated Dilatation in the Human Microcirculation. <i>Circulation Research</i> , 2016, 118, 856-866.	4.5	88
7	Targeting muscle-enriched long non-coding RNA <i>H19</i> reverses pathological cardiac hypertrophy. <i>European Heart Journal</i> , 2020, 41, 3462-3474.	2.2	81
8	Transition in the mechanism of flow-mediated dilatation with aging and development of coronary artery disease. <i>Basic Research in Cardiology</i> , 2017, 112, 5.	5.9	64
9	Germ line activation of the Tie2 and SMMHC promoters causes noncell-specific deletion of floxed alleles. <i>Physiological Genomics</i> , 2008, 35, 1-4.	2.3	59
10	Mitochondrial Oxidative Phosphorylation defect in the Heart of Subjects with Coronary Artery Disease. <i>Scientific Reports</i> , 2019, 9, 7623.	3.3	59
11	Vascular autophagy in health and disease. <i>Basic Research in Cardiology</i> , 2020, 115, 41.	5.9	58
12	Regulation of Insulin Receptor Trafficking by Bardet Biedl Syndrome Proteins. <i>PLoS Genetics</i> , 2015, 11, e1005311.	3.5	57
13	Vascular Actions of Angiotensin $\alpha$ 7 in the Human Microcirculation. <i>Arteriosclerosis, Thrombosis, and Vascular Biology</i> , 2016, 36, 1254-1262.	2.4	55
14	An acute rise in intraluminal pressure shifts the mediator of flow-mediated dilatation from nitric oxide to hydrogen peroxide in human arterioles. <i>American Journal of Physiology - Heart and Circulatory Physiology</i> , 2014, 307, H1587-H1593.	3.2	54
15	Regulation of the human coronary microcirculation. <i>Journal of Molecular and Cellular Cardiology</i> , 2012, 52, 814-821.	1.9	49
16	Gene expression profiling of potential PPAR $\beta$ target genes in mouse aorta. <i>Physiological Genomics</i> , 2004, 18, 33-42.	2.3	47
17	Hyperoxia Causes Mitochondrial Fragmentation in Pulmonary Endothelial Cells by Increasing Expression of Pro-Fission Proteins. <i>Arteriosclerosis, Thrombosis, and Vascular Biology</i> , 2018, 38, 622-635.	2.4	46
18	PGC-1 $\alpha$ (Peroxisome Proliferator-Activated Receptor $\beta$ Coactivator 1- $\alpha$ ) Overexpression in Coronary Artery Disease Recruits NO and Hydrogen Peroxide During Flow-Mediated Dilatation and Protects Against Increased Intraluminal Pressure. <i>Hypertension</i> , 2017, 70, 166-173.	2.7	41

#	ARTICLE	IF	CITATIONS
19	In-depth proteomic analysis of human tropomyosin by top-down mass spectrometry. <i>Journal of Muscle Research and Cell Motility</i> , 2013, 34, 199-210.	2.0	40
20	Mitochondrial signaling in the vascular endothelium: beyond reactive oxygen species. <i>Basic Research in Cardiology</i> , 2016, 111, 26.	5.9	39
21	Telomerase reverse transcriptase protects against angiotensin II-induced microvascular endothelial dysfunction. <i>American Journal of Physiology - Heart and Circulatory Physiology</i> , 2018, 314, H1053-H1060.	3.2	37
22	Preclinical Models of Cancer Therapyâ€™Associated Cardiovascular Toxicity: A Scientific Statement From the American Heart Association. <i>Circulation Research</i> , 2021, 129, e21-e34.	4.5	37
23	Prolonged treatment with angiotensin 1â€™7 improves endothelial function in diet-induced obesity. <i>Journal of Hypertension</i> , 2013, 31, 730-738.	0.5	35
24	Friend or foe? Telomerase as a pharmacological target in cancer and cardiovascular disease. <i>Pharmacological Research</i> , 2016, 111, 422-433.	7.1	31
25	Detrimental effects of chemotherapy on human coronary microvascular function. <i>American Journal of Physiology - Heart and Circulatory Physiology</i> , 2019, 317, H705-H710.	3.2	31
26	Bioinformatic Analysis of Gene Sets Regulated by Ligand-Activated and Dominant-Negative Peroxisome Proliferatorâ€™Activated Receptor Î³ in Mouse Aorta. <i>Arteriosclerosis, Thrombosis, and Vascular Biology</i> , 2010, 30, 518-525.	2.4	26
27	Inactivation of Bardet-Biedl syndrome genes causes kidney defects. <i>American Journal of Physiology - Renal Physiology</i> , 2011, 300, F574-F580.	2.7	26
28	Dahl Salt-Sensitive Rats Are Protected Against Vascular Defects Related to Diet-Induced Obesity. <i>Hypertension</i> , 2012, 60, 404-410.	2.7	26
29	Telomerase Deficiency Predisposes to Heart Failure and Ischemia-Reperfusion Injury. <i>Frontiers in Cardiovascular Medicine</i> , 2019, 6, 31.	2.4	26
30	Visualization and quantification of mitochondrial structure in the endothelium of intact arteries. <i>Cardiovascular Research</i> , 2019, 115, 1546-1556.	3.8	21
31	Cancer therapy-induced cardiovascular toxicity: old/new problems and old drugs. <i>American Journal of Physiology - Heart and Circulatory Physiology</i> , 2019, 317, H164-H167.	3.2	17
32	Greenspace, Inflammation, Cardiovascular Health, and Cancer: A Review and Conceptual Framework for Greenspace in Cardio-Oncology Research. <i>International Journal of Environmental Research and Public Health</i> , 2022, 19, 2426.	2.6	16
33	Contrasting vascular effects caused by loss of Bardet-Biedl syndrome genes. <i>American Journal of Physiology - Heart and Circulatory Physiology</i> , 2010, 299, H1902-H1907.	3.2	14
34	5,6-Î´-DHTL, a stable metabolite of arachidonic acid, is a potential EDHF that mediates microvascular dilation. <i>Free Radical Biology and Medicine</i> , 2017, 103, 87-94.	2.9	14
35	Chemotherapeutic-Induced Cardiovascular Dysfunction: Physiological Effects, Early Detectionâ€™The Role of Telomerase to Counteract Mitochondrial Defects and Oxidative Stress. <i>International Journal of Molecular Sciences</i> , 2018, 19, 797.	4.1	14
36	Critical Interaction Between Telomerase and Autophagy in Mediating Flow-Induced Human Arteriolar Vasodilation. <i>Arteriosclerosis, Thrombosis, and Vascular Biology</i> , 2021, 41, 446-457.	2.4	14

#	ARTICLE	IF	CITATIONS
37	Endothelial dysfunction as a complication of anti-cancer therapy. , 2022, 237, 108116.		14
38	Amelioration of salt-induced vascular dysfunction in mesenteric arteries of Dahl salt-sensitive rats by missense mutation of extracellular superoxide dismutase. American Journal of Physiology - Heart and Circulatory Physiology, 2014, 306, H339-H347.	3.2	12
39	Detection of hydrogen peroxide production in the isolated rat lung using Amplex red. Free Radical Research, 2018, 52, 1052-1062.	3.3	11
40	Lysophosphatidic acid acts on LPA <sub>1</sub> receptor to increase H <sub>2</sub> O <sub>2</sub> during flow-induced dilation in human adipose arterioles. British Journal of Pharmacology, 2018, 175, 4266-4280.	5.4	11
41	Autophagy, TERT, and mitochondrial dysfunction in hyperoxia. American Journal of Physiology - Heart and Circulatory Physiology, 2021, 321, H985-H1003.	3.2	11
42	AT1 Receptors Prevent Salt-Induced Vascular Dysfunction in Isolated Middle Cerebral Arteries of 2 Kidney-1 Clip Hypertensive Rats. American Journal of Hypertension, 2013, 26, 1398-1404.	2.0	10
43	Hexosamine pathway activation and O-linked-N-acetylglucosamine " Novel mediators of endothelial dysfunction in hyperglycemia and diabetes. Vascular Pharmacology, 2012, 56, 113-114.	2.1	9
44	Dietary Sodium Restriction Results in Tissue-Specific Changes in DNA Methylation in Humans. Hypertension, 2021, 78, 434-446.	2.7	9
45	Prolonged endothelial-dysfunction in human arterioles following infection with SARS-CoV-2. Cardiovascular Research, 2022, 118, 18-19.	3.8	9
46	BCR-ABL tyrosine kinase inhibitors promote pathological changes in dilator phenotype in the human microvasculature. Microcirculation, 2020, 27, e12625.	1.8	6
47	Vascular autophagy in physiology and pathology. American Journal of Physiology - Heart and Circulatory Physiology, 2019, 316, H183-H185.	3.2	5
48	Modulation of p66Shc impairs cerebrovascular myogenic tone in low renin but not low nitric oxide models of systemic hypertension. American Journal of Physiology - Heart and Circulatory Physiology, 2021, 321, H1096-H1102.	3.2	5
49	Sweat the small stuff: The human microvasculature and heart disease. Microcirculation, 2021, 28, e12658.	1.8	4
50	Telomerase. Arteriosclerosis, Thrombosis, and Vascular Biology, 2018, 38, 1247-1249.	2.4	2
51	Hypertension preserves the magnitude of microvascular flow-mediated dilation following transient elevation in intraluminal pressure. Physiological Reports, 2021, 9, e14507.	1.7	2
52	Vascular effects of disrupting endothelial mTORC1 signaling in obesity. American Journal of Physiology - Regulatory Integrative and Comparative Physiology, 2021, 321, R228-R237.	1.8	2
53	Adverse Effects of Chemotherapy on Human Microvascular Function. FASEB Journal, 2019, 33, lb453.	0.5	2
54	Pulling back the curtain on anthracycline cardiotoxicity: the hidden role of the microcirculation. Cardiovascular Research, 2021, , .	3.8	1

#	ARTICLE	IF	CITATIONS
55	Response to "Does Angiotensin-Dependent Superoxide Production Help to Prevent Salt-Induced Endothelial Dysfunction in 2 Kidney <sup>1</sup> Clip Hypertensive Rats?" American Journal of Hypertension, 2014, 27, 640-640.	2.0	0
56	Vascular hypercontractility to endothelin 1 in mice lacking endothelial PPAR $\gamma$ . FASEB Journal, 2008, 22, 968.12.	0.5	0
57	Decreased Telomerase Activity Converts the Mechanism of FMD from NO to H <sub>2</sub> O <sub>2</sub> in Human and Mouse Arterioles. FASEB Journal, 2012, 26, 676.1.	0.5	0
58	Decreased Telomerase Activity Sensitizes the Resistance Vasculature to Stress-Induced Endothelial Dysfunction. FASEB Journal, 2013, 27, 678.1.	0.5	0
59	Inhibition of Neutral Sphingomyelinase Prevents High Pressure-Induced Shift in the Mediator of Endothelium-Dependent Dilation from NO to H <sub>2</sub> O <sub>2</sub> . FASEB Journal, 2013, 27, 901.1.	0.5	0
60	Neoadjuvant Chemotherapy Decreases Angiogenesis Potential and Microvascular Function in Human Breast Cancer Patients. FASEB Journal, 2018, 32, 845.6.	0.5	0
61	LPA-Induced activation of LPA 1 receptor leads to the loss of NO-mediated flow-induced dilation in human microvessels. FASEB Journal, 2018, 32, 713.15.	0.5	0
62	Dysbacteriosis an Inciting Cause of Endothelial Dysfunction mediated through Mitochondrial DNA Interactions. FASEB Journal, 2018, 32, 582.3.	0.5	0
63	Integrative Effects of Autophagy and Telomerase on Arteriolar Flow-Mediated Dilation in Health and Coronary Artery Disease. FASEB Journal, 2019, 33, 684.2.	0.5	0
64	Effects of Anti-Cancer Therapy on Human Microvascular Function –a Longitudinal Study. FASEB Journal, 2020, 34, 1-1.	0.5	0
65	Chemotherapy, Microvascular Function, and Angiogenesis –a Longitudinal Study. FASEB Journal, 2022, 36, .	0.5	0
66	Examining the role of Drp1 in age-related microvascular dysfunction. FASEB Journal, 2022, 36, .	0.5	0
67	Circulating Factors Provoke Endothelial Dysfunction in the Human Microcirculation Following Doxorubicin Chemotherapy. FASEB Journal, 2022, 36, .	0.5	0
68	Mitochondrial Telomerase Prevents Chemotherapy-Induced Cardiovascular Toxicity. FASEB Journal, 2022, 36, .	0.5	0
69	Stratification by Race Reveals Disparate Vascular Toxicity in Response to Anti-Cancer Therapies. FASEB Journal, 2022, 36, .	0.5	0
70	Take charge during treatment: A planned exercise protocol to evaluate disparities and cardiovascular outcomes in Black and White patients with breast cancer undergoing treatment.. Journal of Clinical Oncology, 2022, 40, TPS12138-TPS12138.	1.6	0
