#	ARTICLE	IF	CITATIONS
1	The activated sludge ecosystem contains a core community of abundant organisms. ISME Journal, 2016, 10, 11-20.	4.4	416
2	Ammonia and temperature determine potential clustering in the anaerobic digestion microbiome. Water Research, 2015, 75, 312-323.	5.3	276
3	A conceptual ecosystem model of microbial communities in enhanced biological phosphorus removal plants. Water Research, 2010, 44, 5070-5088.	5.3	257
4	Identification of active denitrifiers in full-scale nutrient removal wastewater treatment systems. Environmental Microbiology, 2016, 18, 50-64.	1.8	226
5	A metagenome of a full-scale microbial community carrying out enhanced biological phosphorus removal. ISME Journal, 2012, 6, 1094-1106.	4.4	218
6	MiDAS: the field guide to the microbes of activated sludge. Database: the Journal of Biological Databases and Curation, 2015, 2015, bav062.	1.4	213
7	â€˜ <i>Candidatus</i> Competibacterâ€™-lineage genomes retrieved from metagenomes reveal functional metabolic diversity. ISME Journal, 2014, 8, 613-624.	4.4	203
8	A metabolic model for members of the genus <i>Tetrasphaera</i> involved in enhanced biological phosphorus removal. ISME Journal, 2013, 7, 543-554.	4.4	188
9	Competition between polyphosphate and glycogen accumulating organisms in enhanced biological phosphorus removal systems with acetate and propionate as carbon sources. Journal of Biotechnology, 2006, 123, 22-32.	1.9	174
10	<i>Archaea</i> Dominate the Ammonia-Oxidizing Community in the Rhizosphere of the Freshwater Macrophyte <i>Littorella uniflora</i> . Applied and Environmental Microbiology, 2008, 74, 3279-3283.	1.4	167
11	Microbial communities involved in enhanced biological phosphorus removal from wastewaterâ€™a model system in environmental biotechnology. Current Opinion in Biotechnology, 2012, 23, 452-459.	3.3	167
12	Identification and comparison of aerobic and denitrifying polyphosphate-accumulating organisms. Biotechnology and Bioengineering, 2003, 83, 140-148.	1.7	162
13	A review and update of the microbiology of enhanced biological phosphorus removal in wastewater treatment plants. Antonie Van Leeuwenhoek, 2002, 81, 681-691.	0.7	161
14	Enhanced biological phosphorus removal in a sequencing batch reactor using propionate as the sole carbon source. Biotechnology and Bioengineering, 2004, 85, 56-67.	1.7	158
15	Putative glycogen-accumulating organisms belonging to the Alphaproteobacteria identified through rRNA-based stable isotope probing. Microbiology (United Kingdom), 2006, 152, 419-429.	0.7	156
16	Effect of Lake Trophic Status and Rooted Macrophytes on Community Composition and Abundance of Ammonia-Oxidizing Prokaryotes in Freshwater Sediments. Applied and Environmental Microbiology, 2009, 75, 3127-3136.	1.4	151
17	Influence of Starvation on Potential Ammonia-Oxidizing Activity and <i>amoA</i> mRNA Levels of <i>Nitrosospira briensis</i> . Applied and Environmental Microbiology, 2005, 71, 1276-1282.	1.4	146
18	The bacteriology of chronic venous leg ulcer examined by culture-independent molecular methods. Wound Repair and Regeneration, 2010, 18, 38-49.	1.5	124

#	ARTICLE	IF	CITATIONS
19	Anaerobic and aerobic metabolism of glycogen-accumulating organisms selected with propionate as the sole carbon source. <i>Microbiology (United Kingdom)</i> , 2006, 152, 2767-2778.	0.7	108
20	Metabolic versatility in full-scale wastewater treatment plants performing enhanced biological phosphorus removal. <i>Water Research</i> , 2013, 47, 7032-7041.	5.3	84
21	Proton motive force generation from stored polymers for the uptake of acetate under anaerobic conditions. <i>FEMS Microbiology Letters</i> , 2007, 274, 245-251.	0.7	56
22	Terminal restriction fragment length polymorphism is an "old school" reliable technique for swift microbial community screening in anaerobic digestion. <i>Scientific Reports</i> , 2018, 8, 16818.	1.6	48
23	Metabolic modelling of full-scale enhanced biological phosphorus removal sludge. <i>Water Research</i> , 2014, 66, 283-295.	5.3	41
24	Microscale structure and function of anaerobic-aerobic granules containing glycogen accumulating organisms. <i>FEMS Microbiology Ecology</i> , 2003, 45, 253-261.	1.3	39
25	Limitations of the widely used GAM42a and BET42a probes targeting bacteria in the Gammaproteobacteria radiation. <i>Microbiology (United Kingdom)</i> , 2003, 149, 1239-1247.	0.7	39
26	Electrochemical DNA sandwich assay with a lipase label for attomole detection of DNA. <i>Chemical Communications</i> , 2010, 46, 1836-1838.	2.2	35
27	Community structure of bacteria and fungi in aerosols of a pig confinement building. <i>FEMS Microbiology Ecology</i> , 2012, 80, 390-401.	1.3	35
28	Electrochemical sandwich assay for attomole analysis of DNA and RNA from beer spoilage bacteria <i>Lactobacillus brevis</i> . <i>Biosensors and Bioelectronics</i> , 2012, 37, 99-106.	5.3	31
29	Reappraisal of the phylogeny and fluorescence <i>in situ</i> hybridization probes for the analysis of the <i>Competitionibacteraceae</i> in wastewater treatment systems. <i>Environmental Microbiology Reports</i> , 2015, 7, 166-174.	1.0	28
30	Filtration properties of activated sludge in municipal MBR wastewater treatment plants are related to microbial community structure. <i>Water Research</i> , 2013, 47, 6719-6730.	5.3	25
31	Impact of sludge retention time on the fine composition of the microbial community and extracellular polymeric substances in a membrane bioreactor. <i>Applied Microbiology and Biotechnology</i> , 2016, 100, 8507-8521.	1.7	18
32	Denitrification activity of polyphosphate accumulating organisms (PAOs) in full-scale wastewater treatment plants. <i>Water Science and Technology</i> , 2018, 78, 2449-2458.	1.2	17
33	Metagenomes obtained by "deep sequencing" what do they tell about the enhanced biological phosphorus removal communities?. <i>Water Science and Technology</i> , 2013, 68, 1959-1968.	1.2	14
34	Detection and persistence of fecal Bacteroidales as water quality indicators in unchlorinated drinking water. <i>Systematic and Applied Microbiology</i> , 2009, 32, 362-370.	1.2	12
