citing authors

#	ARTICLE	IF	CITATIONS
1	Natural Antibodies: from First-Line Defense Against Pathogens to Perpetual Immune Homeostasis. <i>Clinical Reviews in Allergy and Immunology</i> , 2020, 58, 213-228.	2.9	60
2	Intravenous immunoglobulin suppresses the polarization of both classically and alternatively activated macrophages. <i>Human Vaccines and Immunotherapeutics</i> , 2020, 16, 233-239.	1.4	5
3	Intravenous immunoglobulin induces IL-4 in human basophils by signaling through surface-bound IgE. <i>Journal of Allergy and Clinical Immunology</i> , 2019, 144, 524-535.e8.	1.5	36
4	Intravenous immunoglobulin protects from experimental allergic bronchopulmonary aspergillosis via a sialylation-dependent mechanism. <i>European Journal of Immunology</i> , 2019, 49, 195-198.	1.6	23
5	Passive Serum Therapy to Immunomodulation by IVIG: A Fascinating Journey of Antibodies. <i>Journal of Immunology</i> , 2018, 200, 1957-1963.	0.4	26
6	Kill α -Em All: Efgartigimod Immunotherapy for Autoimmune Diseases. <i>Trends in Pharmacological Sciences</i> , 2018, 39, 919-922.	4.0	11
7	Regulatory T cells induce activation rather than suppression of human basophils. <i>Science Immunology</i> , 2018, 3, .	5.6	38
8	Catalytic antibodies in patients with systemic lupus erythematosus. <i>European Journal of Rheumatology</i> , 2018, 5, 173-178.	1.3	6
9	Regulatory T cell frequency, but not plasma IL-33 levels, represents potential immunological biomarker to predict clinical response to intravenous immunoglobulin therapy. <i>Journal of Neuroinflammation</i> , 2017, 14, 58.	3.1	23
10	Circulating Normal IgG as Stimulator of Regulatory T Cells: Lessons from Intravenous Immunoglobulin. <i>Trends in Immunology</i> , 2017, 38, 789-792.	2.9	35
11	IVIg-mediated effector functions in autoimmune and inflammatory diseases. <i>International Immunology</i> , 2017, 29, 491-498.	1.8	204
12	Monomeric Immunoglobulin A from Plasma Inhibits Human Th17 Responses In Vitro Independent of Fc γ RI and DC-SIGN. <i>Frontiers in Immunology</i> , 2017, 8, 275.	2.2	25
13	Natural Immunomodulators. <i>Journal of Immunology Research</i> , 2017, 2017, 1-2.	0.9	21
14	Generation of Catalytic Antibodies Is an Intrinsic Property of an Individual's Immune System: A Study on a Large Cohort of Renal Transplant Patients. <i>Journal of Immunology</i> , 2016, 196, 4075-4081.	0.4	3
15	Tackling Difficult Staphylococcus aureus Infections: Antibodies Show the Way. <i>Cell Host and Microbe</i> , 2016, 20, 555-557.	5.1	25
16	Heme oxygenase-1 is dispensable for the anti-inflammatory activity of intravenous immunoglobulin. <i>Scientific Reports</i> , 2016, 6, 19592.	1.6	19
17	Intravenous immunoglobulin as clinical immune-modulating therapy. <i>Cmaj</i> , 2015, 187, 257-264.	0.9	74
18	Molecular and immunological biomarkers to predict IVIg response. <i>Trends in Molecular Medicine</i> , 2015, 21, 145-147.	3.5	31

#	ARTICLE	IF	CITATIONS
19	Intravenous immunoglobulin-mediated expansion of regulatory T cells in autoimmune patients is associated with increased prostaglandin E2 levels in the circulation. <i>Cellular and Molecular Immunology</i> , 2015, 12, 650-652.	4.8	33
20	Basophils are inept at promoting human Th17 responses. <i>Human Immunology</i> , 2015, 76, 176-180.	1.2	11
21	Mistletoe: From Basic Research to Clinical Outcomes in Cancer and Other Indications. <i>Evidence-based Complementary and Alternative Medicine</i> , 2014, 2014, 1-2.	0.5	5
22	GM-CSF along with IL-4 but not alone is indispensable for the differentiation of human dendritic cells from monocytes. <i>Journal of Allergy and Clinical Immunology</i> , 2014, 133, 1500-1502.e1.	1.5	9
23	IVIg pluripotency and the concept of Fc-sialylation: challenges to the scientist. <i>Nature Reviews Immunology</i> , 2014, 14, 349-349.	10.6	68
24	Exploitation of rolling circle amplification for the construction of large phage-display antibody libraries. <i>Journal of Immunological Methods</i> , 2014, 407, 26-34.	0.6	16
25	Antibody-mediated catalysis: Induction and therapeutic relevance. <i>Autoimmunity Reviews</i> , 2013, 12, 648-652.	2.5	24
26	Intravenous Gammaglobulin Inhibits Encephalitogenic Potential of Pathogenic T Cells and Interferes with their Trafficking to the Central Nervous System, Implicating Sphingosine-1 Phosphate Receptor 1â€™Mammalian Target of Rapamycin Axis. <i>Journal of Immunology</i> , 2013, 190, 4535-4541.	0.4	56
27	Intravenous immunoglobulin expands regulatory T cells via induction of cyclooxygenase-2â€™dependent prostaglandin E2 in human dendritic cells. <i>Blood</i> , 2013, 122, 1419-1427.	0.6	149
28	Intravenous Immunoglobulin Expands Regulatory T Cells in Autoimmune Rheumatic Disease. <i>Journal of Rheumatology</i> , 2012, 39, 450-451.	1.0	48
29	Inhibition of differentiation, amplification, and function of human TH17 cells by intravenous immunoglobulin. <i>Journal of Allergy and Clinical Immunology</i> , 2011, 127, 823-830.e7.	1.5	135
30	Autoantibodies with enzymatic properties in human autoimmune diseases. <i>Journal of Autoimmunity</i> , 2011, 37, 144-150.	3.0	34
31	Viscum album Exerts Anti-Inflammatory Effect by Selectively Inhibiting Cytokine-Induced Expression of Cyclooxygenase-2. <i>PLoS ONE</i> , 2011, 6, e26312.	1.1	46
32	Comparison of different IVIg preparations on IL-17 production by human Th17 cells. <i>Autoimmunity Reviews</i> , 2011, 10, 809-810.	2.5	55
33	Immunomodulation by Intravenous Immunoglobulin: Role of Regulatory T Cells. <i>Journal of Clinical Immunology</i> , 2010, 30, 4-8.	2.0	63
34	Basophils and Nephritis in Lupus. <i>New England Journal of Medicine</i> , 2010, 363, 1080-1082.	13.9	27
35	Antiangiogenic properties of viscum album extracts are associated with endothelial cytotoxicity. <i>Anticancer Research</i> , 2009, 29, 2945-50.	0.5	40
36	Induction of maturation and activation of human dendritic cells: A mechanism underlying the beneficial effect of Viscum albumas complimentary therapy in cancer. <i>BMC Cancer</i> , 2008, 8, 161.	1.1	37

#	ARTICLE	IF	CITATIONS
37	Shortage of human intravenous immunoglobulin—reasons and possible solutions. <i>Nature Clinical Practice Neurology</i> , 2007, 3, 120-121.	2.7	71
38	Catalytic IgG from Patients with Hemophilia A Inactivate Therapeutic Factor VIII. <i>Journal of Immunology</i> , 2006, 177, 1355-1363.	0.4	45
39	High levels of catalytic antibodies correlate with favorable outcome in sepsis. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2005, 102, 4109-4113.	3.3	110
40	Inhibition of maturation and function of dendritic cells by intravenous immunoglobulin. <i>Blood</i> , 2003, 101, 758-765.	0.6	280
41	The Prevalence of Proteolytic Antibodies against Factor VIII in Hemophilia A. <i>New England Journal of Medicine</i> , 2002, 346, 662-667.	13.9	107
42	Pooled Normal Human Polyspecific IgM Contains Neutralizing Anti-Idiotypes to IgG Autoantibodies of Autoimmune Patients and Protects From Experimental Autoimmune Disease. <i>Blood</i> , 1997, 90, 4004-4013.	0.6	95
