#	ARTICLE	IF	CITATIONS
1	Wettability effect on nanoconfined water flow. Proceedings of the National Academy of Sciences of the United States of America, 2017, 114, 3358-3363.	7.1	407
2	Water distribution characteristic and effect on methane adsorption capacity in shale clay. International Journal of Coal Geology, 2016, 159, 135-154.	5.0	268
3	Water adsorption and its impact on the pore structure characteristics of shale clay. Applied Clay Science, 2018, 155, 126-138.	5.2	174
4	Thickness and stability of water film confined inside nanoslits and nanocapillaries of shale and clay. International Journal of Coal Geology, 2017, 179, 253-268.	5.0	162
5	Flow behavior of gas confined in nanoporous shale at high pressure: Real gas effect. Fuel, 2017, 205, 173-183.	6.4	146
6	Water Sorption and Distribution Characteristics in Clay and Shale: Effect of Surface Force. Energy & Fuels, 2016, 30, 8863-8874.	5.1	123
7	A multi-site model to determine supercritical methane adsorption in energetically heterogeneous shales. Chemical Engineering Journal, 2018, 349, 438-455.	12.7	78
8	Pore characteristics differences between clay-rich and clay-poor shales of the Lower Cambrian Niutitang Formation in the Northern Guizhou area, and insights into shale gas storage mechanisms. International Journal of Coal Geology, 2017, 178, 13-25.	5.0	75
9	An apparent liquid permeability model of dual-wettability nanoporous media: A case study of shale. Chemical Engineering Science, 2018, 187, 280-291.	3.8	68
10	Numerical investigation of the well shut-in and fracture uncertainty on fluid-loss and production performance in gas-shale reservoirs. Journal of Natural Gas Science and Engineering, 2017, 46, 421-435.	4.4	67
11	Capillary filling under nanoconfinement: The relationship between effective viscosity and water-wall interactions. International Journal of Heat and Mass Transfer, 2018, 118, 900-910.	4.8	65
12	Real gas transport in shale matrix with fractal structures. Fuel, 2018, 219, 353-363.	6.4	61
13	Capillary filling of confined water in nanopores: Coupling the increased viscosity and slippage. Chemical Engineering Science, 2018, 186, 228-239.	3.8	59
14	Effects of energetic heterogeneity on gas adsorption and gas storage in geologic shale systems. Applied Energy, 2019, 251, 113368.	10.1	58
15	Thermodynamic and Structural Characterization of Bulk Organic Matter in Chinese Silurian Shale: Experimental and Molecular Modeling Studies. Energy & Fuels, 2017, 31, 4851-4865.	5.1	53
16	Effect of water saturation on gas slippage in tight rocks. Fuel, 2018, 225, 519-532.	6.4	53
17	A Fractal Model for Gas-Water Relative Permeability in Inorganic Shale with Nanoscale Pores. Transport in Porous Media, 2018, 122, 305-331.	2.6	51
18	Experimental and numerical study on the relationship between water imbibition and salt ion diffusion in fractured shale reservoirs. Journal of Natural Gas Science and Engineering, 2017, 38, 283-297.	4.4	50

#	ARTICLE	IF	CITATIONS
19	Wettability effects on phase behavior and interfacial tension in shale nanopores. <i>Fuel</i> , 2021, 290, 119983.	6.4	50
20	Effects of slick water fracturing fluid on pore structure and adsorption characteristics of shale reservoir rocks. <i>Journal of Natural Gas Science and Engineering</i> , 2018, 51, 27-36.	4.4	45
21	Pore-Scale Perspective of Gas/Water Two-Phase Flow in Shale. <i>SPE Journal</i> , 2021, 26, 828-846.	3.1	45
22	A Critical Review of Enhanced Oil Recovery by Imbibition: Theory and Practice. <i>Energy & Fuels</i> , 2021, 35, 5643-5670.	5.1	44
23	Nanoconfinement Effect on <i>n</i> -Alkane Flow. <i>Journal of Physical Chemistry C</i> , 2019, 123, 16456-16461.	3.1	43
24	Manipulating the Flow of Nanoconfined Water by Temperature Stimulation. <i>Angewandte Chemie - International Edition</i> , 2018, 57, 8432-8437.	13.8	41
25	NANOSCALE PORE SIZE DISTRIBUTION EFFECTS ON GAS PRODUCTION FROM FRACTAL SHALE ROCKS. <i>Fractals</i> , 2019, 27, 1950142.	3.7	41
26	Characterization of the Lower Cambrian Shale in the Northwestern Guizhou Province, South China: Implications for Shale-Gas Potential. <i>Energy & Fuels</i> , 2015, 29, 6383-6393.	5.1	40
27	Quantitative prediction of oil and gas prospects of the Sinian-Lower Paleozoic in the Sichuan Basin in central China. <i>Energy</i> , 2019, 174, 861-872.	8.8	37
28	Effect of water saturation on gas slippage in circular and angular pores. <i>AIChE Journal</i> , 2018, 64, 3529-3541.	3.6	36
29	Modelling the water transport behavior in organic-rich nanoporous shale with generalized lattice Boltzmann method. <i>International Journal of Heat and Mass Transfer</i> , 2018, 127, 123-134.	4.8	36
30	A Model for Gas Transport in Dual-Porosity Shale Rocks with Fractal Structures. <i>Industrial & Engineering Chemistry Research</i> , 2018, 57, 6530-6537.	3.7	32
31	Anomalous Capillary Rise under Nanoconfinement: A View of Molecular Kinetic Theory. <i>Langmuir</i> , 2018, 34, 7714-7725.	3.5	32
32	Molecular dynamics computations of brine-CO ₂ /CH ₄ -shale contact angles: Implications for CO ₂ sequestration and enhanced gas recovery. <i>Fuel</i> , 2020, 280, 118590.	6.4	32
33	Determination of CH ₄ , C ₂ H ₆ and CO ₂ adsorption in shale kerogens coupling sorption-induced swelling. <i>Chemical Engineering Journal</i> , 2021, 410, 127690.	12.7	31
34	Artificial neural network assisted two-phase flash calculations in isothermal and thermal compositional simulations. <i>Fluid Phase Equilibria</i> , 2019, 486, 59-79.	2.5	28
35	Mesoscopic method to study water flow in nanochannels with different wettability. <i>Physical Review E</i> , 2020, 102, 013306.	2.1	28
36	Ultra-high Water Flow Enhancement by Optimizing Nanopore Chemistry and Geometry. <i>Langmuir</i> , 2019, 35, 8867-8873.	3.5	26

#	ARTICLE	IF	CITATIONS
37	Practical application of machine learning on fast phase equilibrium calculations in compositional reservoir simulations. <i>Journal of Computational Physics</i> , 2020, 401, 109013.	3.8	25
38	A discrete model for apparent gas permeability in nanoporous shale coupling initial water distribution. <i>Journal of Natural Gas Science and Engineering</i> , 2018, 59, 80-96.	4.4	24
39	Modeling the confined fluid flow in micro-nanoporous media under geological temperature and pressure. <i>International Journal of Heat and Mass Transfer</i> , 2019, 145, 118758.	4.8	18
40	Roles of multicomponent adsorption and geomechanics in the development of an Eagle Ford shale condensate reservoir. <i>Fuel</i> , 2019, 242, 710-718.	6.4	18
41	Mechanism of Liquid-Phase Adsorption and Desorption in Coalbed Methane Systems: A New Insight Into an Old Problem. <i>SPE Reservoir Evaluation and Engineering</i> , 2017, 20, 639-653.	1.8	16
42	Effects of helium adsorption in carbon nanopores on apparent void volumes and excess methane adsorption isotherms. <i>Fuel</i> , 2020, 270, 117499.	6.4	15
43	Effects of an adsorbent accessible volume on methane adsorption on shale. <i>Computer Methods in Applied Mechanics and Engineering</i> , 2020, 370, 113222.	6.6	14
44	On the Negative Excess Isotherms for Methane Adsorption at High Pressure: Modeling and Experiment. <i>SPE Journal</i> , 2019, 24, 2504-2525.	3.1	12
45	Capillary dynamic under nanoconfinement: Coupling the energy dissipation of contact line and confined water. <i>International Journal of Heat and Mass Transfer</i> , 2018, 127, 329-338.	4.8	11
46	Effects of Temperature and Pressure on Spontaneous Counter-Current Imbibition in Unsaturated Porous Media. <i>Energy & Fuels</i> , 2019, 33, 8544-8556.	5.1	11
47	Nanoconfinement Effect on Surface Tension: Perspectives from Molecular Potential Theory. <i>Langmuir</i> , 2020, 36, 8764-8776.	3.5	11
48	Dynamic wetting of solid-liquid-liquid system by molecular kinetic theory. <i>Journal of Colloid and Interface Science</i> , 2020, 579, 470-478.	9.4	11
49	The increased viscosity effect for fracturing fluid imbibition in shale. <i>Chemical Engineering Science</i> , 2021, 232, 116352.	3.8	10
50	Capillary dynamics of confined water in nanopores: The impact of precursor films. <i>Chemical Engineering Journal</i> , 2021, 409, 128113.	12.7	10
51	Effect of Dynamic Contact Angle on Spontaneous Capillary-Liquid-Liquid Imbibition by Molecular Kinetic Theory. <i>SPE Journal</i> , 2021, , 1-16.	3.1	10
52	Laboratory Research on Gas Transport in Shale Nanopores Considering the Stress Effect and Slippage Effect. <i>Journal of Geophysical Research: Solid Earth</i> , 2020, 125, e2019JB018256.	3.4	9
53	Manipulating the Flow of Nanoconfined Water by Temperature Stimulation. <i>Angewandte Chemie</i> , 2018, 130, 8568-8573.	2.0	8
54	Dynamic behavior of miscible binary fluid mixtures in nanopores: Implications for CO ₂ -enhanced oil flow in shale reservoirs. <i>Fuel</i> , 2022, 327, 125128.	6.4	8

#	ARTICLE	IF	CITATIONS
55	Predicting the fracture initiation pressure for perforated water injection wells in fossil energy development. <i>International Journal of Hydrogen Energy</i> , 2019, 44, 16257-16270.	7.1	7
56	Shale gas transport in wedged nanopores with water films. <i>Journal of Natural Gas Science and Engineering</i> , 2019, 66, 217-232.	4.4	7
57	Molecular-scale friction at a water-graphene interface and its relationship with slip behavior. <i>Physics of Fluids</i> , 2020, 32, .	4.0	7
58	Mathematical model of dynamic imbibition in nanoporous reservoirs. <i>Petroleum Exploration and Development</i> , 2022, 49, 170-178.	7.0	7
59	A Universal Model of Water Flow Through Nanopores in Unconventional Reservoirs: Relationships Between Slip, Wettability and Viscosity. , 2016, , .		6
60	Gas Transport in Shale Nanopores with Mobile High-Viscosity Water Film. <i>Industrial & Engineering Chemistry Research</i> , 2018, 57, 11219-11228.	3.7	6
61	A relative permeability model considering nanoconfinement and dynamic contact angle effects for tight reservoirs. <i>Energy</i> , 2022, 258, 124846.	8.8	6
62	Gas storage and transport in porous media: From shale gas to helium-3. <i>Planetary and Space Science</i> , 2021, 204, 105283.	1.7	5
63	A comprehensive review on the flow behaviour in shale gas reservoirs: Multi-scale, multi-phase, and multi-physics. <i>Canadian Journal of Chemical Engineering</i> , 2022, 100, 3084-3122.	1.7	5
64	Investigation of Gas-Water Distribution Characteristics in Kerogen Pores: A View of Intermolecular Surface Force. , 2016, , .		4
65	Quasi-Continuum Water Flow under Nanoconfined Conditions: Coupling the Effective Viscosity and the Slip Length. <i>Industrial & Engineering Chemistry Research</i> , 2020, 59, 20504-20514.	3.7	3
66	Model for Interfacial Tension of Nanoconfined Lennard-Jones Fluid. <i>Energy & Fuels</i> , 2021, 35, 4044-4052.	5.1	3
67	Methane Transport through Nanoporous Shale with Sub-Irreducible Water Saturation. , 2017, , .		2
68	Gas Slippage in Tight Rocks With Sub-irreducible Water Saturation. , 2017, , .		2
69	Effect of Surface Force on Nanoconfined Shale-Gas Flow in Slit Channels. <i>SPE Journal</i> , 2021, 26, 448-460.	3.1	2
70	Modelling the Apparent Viscosity of Water Confined in Nanoporous Shale: Effect of the Fluid/Pore-Wall Interaction. , 2020, , .		1
71	Investment Strategy of CO ₂ -EOR in China: Analysis Based on Real Option Approach. , 2021, , .		1
72	Water Sorption and Distribution Characteristics inside Shale Nano-capillaries and Nano-channels: Effect of Surface Force Interactions. , 2016, , .		0

#	ARTICLE	IF	CITATIONS
73	The Role of Adsorbed Water on Pore Structure Characteristics and Methane Adsorption of Shale Clay. , 2018, , .		0
