#	ARTICLE	IF	CITATIONS
1	Hydrogen-based sono-hybrid catalytic degradation and mitigation of industrially-originated dye-based pollutants. International Journal of Hydrogen Energy, 2023, 48, 6597-6612.	7.1	31
2	Modeling of indoor air treatment using an innovative photocatalytic luminous textile: Reactor compactness and mass transfer enhancement. Chemical Engineering Journal, 2022, 430, 132636.	12.7	17
3	Preparation and applications of chitosan and cellulose composite materials. Journal of Environmental Management, 2022, 301, 113850.	7.8	60
4	Heterogeneous advanced oxidation processes over stoichiometric ABO <sub>3</sub> perovskite nanostructures. Materials Today Nano, 2022, 18, 100184.	4.6	28
5	Novel Photocatalysts for Environmental and Energy Applications. Catalysts, 2022, 12, 458.	3.5	8
6	Enhanced adsorption of ketoprofen and 2,4-dichlorophenoxyacetic acid on Physalis peruviana fruit residue functionalized with H <sub>2</sub> SO <sub>4</sub> : Adsorption properties and statistical physics modeling. Chemical Engineering Journal, 2022, 445, 136773.	12.7	22
7	Titanium-based photocatalytic coatings for bacterial disinfection: The shift from suspended powders to catalytic interfaces. Surfaces and Interfaces, 2022, 32, 102078.	3.0	9
8	Recent progress and challenges on the removal of per- and poly-fluoroalkyl substances (PFAS) from contaminated soil and water. Environmental Science and Pollution Research, 2022, 29, 58405-58428.	5.3	18
9	Investigation and modeling of odors release from membrane holes on daily overlay in a landfill and its impact on landfill odor control. Environmental Science and Pollution Research, 2021, 28, 4443-4451.	5.3	3
10	Insight into the interaction of magnetic photocatalysts with the incoming light accelerating bacterial inactivation and environmental cleaning. Applied Catalysis B: Environmental, 2021, 281, 119420.	20.2	33
11	Combining photocatalytic process and biological treatment for Reactive Green 12 degradation: optimization, mineralization, and phytotoxicity with seed germination. Environmental Science and Pollution Research, 2021, 28, 12490-12499.	5.3	34
12	Advances in Antimicrobial Coatings. Coatings, 2021, 11, 148.	2.6	3
13	Update on Interfacial Charge Transfer (IFTC) Processes on Films Inactivating Viruses/Bacteria under Visible Light: Mechanistic Considerations and Critical Issues. Catalysts, 2021, 11, 201.	3.5	13
14	Emerging technologies for biofuel production: A critical review on recent progress, challenges and perspectives. Journal of Environmental Management, 2021, 290, 112627.	7.8	122
15	Accelerating the Design of Photocatalytic Surfaces for Antimicrobial Application: Machine Learning Based on a Sparse Dataset. Catalysts, 2021, 11, 1001.	3.5	6
16	Coupling electrocoagulation and solar photocatalysis for electro- and photo-catalytic removal of carmoisine by Ag/graphitic carbon nitride: Optimization by process modeling and kinetic studies. Journal of Molecular Liquids, 2021, 340, 116917.	4.9	9
17	Photo-induced environmental remediation, biomedical imaging, and microbial inactivation by Mn-doped semiconductors: critical issues. Current Opinion in Chemical Engineering, 2021, 34, 100731.	7.8	2
18	Nanostructured NaFeS <sub>2</sub> as a cost-effective and robust electrocatalyst for hydrogen and oxygen evolution with reduced overpotentials. Chemical Engineering Journal, 2021, 426, 131315.	12.7	20

#	ARTICLE	IF	CITATIONS
19	Mechanisms and adsorption capacities of biochar for the removal of organic and inorganic pollutants from industrial wastewater. <i>International Journal of Environmental Science and Technology</i> , 2021, 18, 3273-3294.	3.5	287
20	Preparation, characterization and application of biosurfactant in various industries: A critical review on progress, challenges and perspectives. <i>Environmental Technology and Innovation</i> , 2021, 24, 102090.	6.1	53
21	Recent advances on sputtered films with Cu in ppm concentrations leading to an acceleration of the bacterial inactivation. <i>Catalysis Today</i> , 2020, 340, 347-362.	4.4	20
22	Indoor air treatment of refrigerated food chambers with synergetic association between cold plasma and photocatalysis: Process performance and photocatalytic poisoning. <i>Chemical Engineering Journal</i> , 2020, 382, 122951.	12.7	35
23	Recent progress in black phosphorus nanostructures as environmental photocatalysts. <i>Chemical Engineering Journal</i> , 2020, 379, 122297.	12.7	73
24	New Evidence for Ag-Sputtered Materials Inactivating Bacteria by Surface Contact without the Release of Ag Ions: End of a Long Controversy?. <i>ACS Applied Materials &amp; Interfaces</i> , 2020, 12, 4998-5007.	8.0	10
25	KCa <sub>2</sub> Mg <sub>2</sub> V <sub>3</sub> O <sub>12</sub> : A novel efficient rare-earth-free self-activated yellow-emitting phosphor. <i>Journal of Photochemistry and Photobiology A: Chemistry</i> , 2020, 401, 112765.	3.9	19
26	Synthesis and photoluminescence properties of near-UV-excitable cyan-emitting Ca <sub>2</sub> YHf <sub>2</sub> Ga <sub>3</sub> O <sub>12</sub> :Ce <sup>3+</sup> garnet phosphors. <i>Journal of Luminescence</i> , 2020, 227, 117544.	3.1	14
27	Tandem Synthesis of High Yield MoS <sub>2</sub> Nanosheets and Enzyme Peroxidase Mimicking Properties. <i>Catalysts</i> , 2020, 10, 1009.	3.5	13
28	Nano-sized iron oxides supported on polyester textile to remove fluoroquinolones in hospital wastewater. <i>Environmental Science: Nano</i> , 2020, 7, 2156-2165.	4.3	11
29	Simultaneous removal of bacteria and volatile organic compounds on Cu <sub>2</sub> O-NPs decorated TiO <sub>2</sub> nanotubes: Competition effect and kinetic studies. <i>Journal of Photochemistry and Photobiology A: Chemistry</i> , 2020, 400, 112722.	3.9	43
30	Biological responses at the interface of Ti-doped diamond-like carbon surfaces for indoor environment application. <i>Environmental Science and Pollution Research</i> , 2020, 27, 31120-31129.	5.3	6
31	Photo-plasma catalytic hybrid systems for air treatment: reactor design from laboratory to industrial scales. , 2020, , 373-389.		0
32	Architected Cu <sup>2+</sup> /TNTZ Bilayered Coatings Showing Bacterial Inactivation under Indoor Light and Controllable Copper Release: Effect of the Microstructure on Copper Diffusion. <i>Coatings</i> , 2020, 10, 574.	2.6	1
33	Emerging technologies for the recovery of rare earth elements (REEs) from the end-of-life electronic wastes: a review on progress, challenges, and perspectives. <i>Environmental Science and Pollution Research</i> , 2020, 27, 36052-36074.	5.3	72
34	Digitally Printed AgNPs Doped TiO <sub>2</sub> on Commercial Porcelain-Gr <sup>2</sup> s Tiles: Synergistic Effects and Continuous Photocatalytic Antibacterial Activity. <i>Surfaces</i> , 2020, 3, 11-25.	2.3	18
35	Insights into the Photocatalytic Bacterial Inactivation by Flower-Like Bi <sub>2</sub> WO <sub>6</sub> under Solar or Visible Light, Through in Situ Monitoring and Determination of Reactive Oxygen Species (ROS). <i>Water (Switzerland)</i> , 2020, 12, 1099.	2.7	26
36	Advances in catalytic/photocatalytic bacterial inactivation by nano Ag and Cu coated surfaces and medical devices. <i>Applied Catalysis B: Environmental</i> , 2019, 240, 291-318.	20.2	112

#	ARTICLE	IF	CITATIONS
37	Photocatalytic indoor/outdoor air treatment and bacterial inactivation on Cu <sub>x</sub> O/TiO <sub>2</sub> prepared by HiPIMS on polyester cloth under low intensity visible light. Applied Catalysis B: Environmental, 2019, 259, 118074.	20.2	58
38	Nanomaterials-based coatings: an introduction. , 2019, , 1-7.		5
39	Photocatalytic Performance of Cu <sub>x</sub> O/TiO <sub>2</sub> Deposited by HiPIMS on Polyester under Visible Light LEDs: Oxidants, Ions Effect, and Reactive Oxygen Species Investigation. Materials, 2019, 12, 412.	2.9	49
40	Methods for Synthesis of Hybrid Nanoparticles. , 2019, , 51-63.		14
41	Flower-like magnetized photocatalysts accelerating an emerging pollutant removal under indoor visible light and related phenomena. Journal of Photochemistry and Photobiology A: Chemistry, 2019, 378, 105-113.	3.9	23
42	Magnetically separable TiO <sub>2</sub> /FeO <sub>x</sub> /POM accelerating the photocatalytic removal of the emerging endocrine disruptor: 2,4-dichlorophenol. Applied Catalysis B: Environmental, 2019, 254, 66-75.	20.2	86
43	Physics, Electrochemistry, Photochemistry, and Photoelectrochemistry of Hybrid Nanoparticles. , 2019, , 95-123.		7
44	Femtosecond Spectroscopy of Au Hot-Electron Injection into TiO <sub>2</sub> : Evidence for Au/TiO <sub>2</sub> Plasmon Photocatalysis by Bactericidal Au Ions and Related Phenomena. Nanomaterials, 2019, 9, 217.	4.1	25
45	Evidence for a dual mechanism in the TiO <sub>2</sub> /Cu <sub>x</sub> O photocatalyst during the degradation of sulfamethazine under solar or visible light: Critical issues. Journal of Photochemistry and Photobiology A: Chemistry, 2019, 375, 270-279.	3.9	48
46	Quantification of the local magnetized nanotube domains accelerating the photocatalytic removal of the emerging pollutant tetracycline. Applied Catalysis B: Environmental, 2019, 248, 450-458.	20.2	68
47	Photocatalytic degradation of binary and ternary mixtures of antibiotics: reactive species investigation in pilot scale. Chemical Engineering Research and Design, 2019, 144, 300-309.	5.6	33
48	Deciphering the Mechanisms of Bacterial Inactivation on HiPIMS Sputtered Cu <sub>x</sub> O-FeO <sub>x</sub> -PET Surfaces: From Light Absorption to Catalytic Bacterial Death. ACS Applied Materials & Interfaces, 2019, 11, 45319-45329.	8.0	8
49	Piezoelectric materials for catalytic/photocatalytic removal of pollutants: Recent advances and outlook. Applied Catalysis B: Environmental, 2019, 241, 256-269.	20.2	440
50	Synergism between non-thermal plasma and photocatalysis: Implications in the post discharge of ozone at a pilot scale in a catalytic fixed-bed reactor. Applied Catalysis B: Environmental, 2019, 241, 227-235.	20.2	37
51	Monitoring the energy of the metal ion-content plasma-assisted deposition and its implication for bacterial inactivation. Applied Surface Science, 2019, 467-468, 749-752.	6.1	2
52	Recent advances in nano-bio-interactions: Editorial. Colloids and Surfaces B: Biointerfaces, 2019, 173, 906.	5.0	0
53	Enhancing solar disinfection of water in PET bottles by optimized in-situ formation of iron oxide films. From heterogeneous to homogeneous action modes with H <sub>2</sub> O <sub>2</sub> vs. O <sub>2</sub> â€” Part 2: Direct use of (natural) iron oxides. Chemical Engineering Journal, 2019, 360, 1051-1062.	12.7	6
54	Iron-coated polymer films with high antibacterial activity under indoor and outdoor light, prepared by different facile pre-treatment and deposition methods. Applied Catalysis B: Environmental, 2019, 243, 161-174.	20.2	0

#	ARTICLE	IF	CITATIONS
55	Enhancing solar disinfection of water in PET bottles by optimized in-situ formation of iron oxide films. From heterogeneous to homogeneous action modes with H <sub>2</sub> O <sub>2</sub> vs. O <sub>2</sub> – Part 1: Iron salts as oxide precursors. Chemical Engineering Journal, 2019, 358, 211-224.	12.7	17
56	Duality in the Mechanism of Hexagonal ZnO/Cu <sub>x</sub> O Nanowires Inducing Sulfamethazine Degradation under Solar or Visible Light. Catalysts, 2019, 9, 916.	3.5	37
57	Discoloration of simulated textile effluent in continuous photoreactor using immobilized titanium dioxide: Effect of zinc and sodium chloride. Journal of Photochemistry and Photobiology A: Chemistry, 2018, 358, 111-120.	3.9	39
58	Bacterial disinfection by the photo-Fenton process: Extracellular oxidation or intracellular photo-catalysis?. Applied Catalysis B: Environmental, 2018, 227, 285-295.	20.2	75
59	Innovative Ti <sub>1-x</sub> Nb <sub>x</sub> -Ag Films Inducing Bacterial Disinfection by Visible Light/Thermal Treatment. ACS Applied Materials & Interfaces, 2018, 10, 12021-12030.	8.0	9
60	Evidence for the degradation of an emerging pollutant by a mechanism involving iso-energetic charge transfer under visible light. Applied Catalysis B: Environmental, 2018, 233, 175-183.	20.2	47
61	Abatement of ammonia and butyraldehyde under non-thermal plasma and photocatalysis: Oxidation processes for the removal of mixture pollutants at pilot scale. Chemical Engineering Journal, 2018, 344, 165-172.	12.7	55
62	Solar light and the photo-Fenton process against antibiotic resistant bacteria in wastewater: A kinetic study with a Streptomycin-resistant strain. Catalysis Today, 2018, 313, 86-93.	4.4	41
63	Mechanisms of the Antibacterial Effects of TiO <sub>2</sub> -FeO <sub>x</sub> under Solar or Visible Light: Schottky Barriers versus Surface Plasmon Resonance. Coatings, 2018, 8, 391.	2.6	21
64	Interaction of Vibrio to Biotic and Abiotic Surfaces: Relationship between Hydrophobicity, Cell Adherence, Biofilm Production, and Cytotoxic Activity. Surfaces, 2018, 1, 187-201.	2.3	9
65	Oxygen enriched network-type carbon spheres for multipurpose water purification applications. Environmental Technology and Innovation, 2018, 12, 160-171.	6.1	13
66	Synthesis and characterization of fluorinated anatase nanoparticles and subsequent N-doping for efficient visible light activated photocatalysis. Colloids and Surfaces B: Biointerfaces, 2018, 171, 445-450.	5.0	33
67	Reactive species monitoring and their contribution for removal of textile effluent with photocatalysis under UV and visible lights: Dynamics and mechanism. Journal of Photochemistry and Photobiology A: Chemistry, 2018, 365, 94-102.	3.9	45
68	Extracellular bacterial inactivation proceeding without Cu-ion release: Drastic effects of the applied plasma energy on the performance of the Cu-polyester (PES) samples. Applied Catalysis B: Environmental, 2018, 239, 245-253.	20.2	18
69	Bacterial adhesion and inactivation on Ag decorated TiO <sub>2</sub> -nanotubes under visible light: Effect of the nanotubes geometry on the photocatalytic activity. Colloids and Surfaces B: Biointerfaces, 2018, 170, 92-98.	5.0	57
70	Beneficial effect of Cu on Ti-Nb-Ta-Zr sputtered uniform/adhesive gum films accelerating bacterial inactivation under indoor visible light. Colloids and Surfaces B: Biointerfaces, 2017, 152, 152-158.	5.0	14
71	Modeling and treatment optimization of pharmaceutically active compounds by the photo-Fenton process: The case of the antidepressant Venlafaxine. Journal of Environmental Chemical Engineering, 2017, 5, 818-828.	6.7	18
72	Insight into the catalyst/photocatalyst microstructure presenting the same composition but leading to a variance in bacterial reduction under indoor visible light. Applied Catalysis B: Environmental, 2017, 208, 135-147.	20.2	22

#	ARTICLE	IF	CITATIONS
73	Innovative and stable TiO <sub>2</sub> supported catalytic surfaces removing aldehydes under UV-light irradiation. <i>Journal of Photochemistry and Photobiology A: Chemistry</i> , 2017, 343, 96-102.	3.9	22
74	Bactericide effects of transparent polyethylene photocatalytic films coated by oxides under visible light. <i>Applied Catalysis B: Environmental</i> , 2017, 213, 62-73.	20.2	21
75	Study of synergetic effect, catalytic poisoning and regeneration using dielectric barrier discharge and photocatalysis in a continuous reactor: Abatement of pollutants in air mixture system. <i>Applied Catalysis B: Environmental</i> , 2017, 213, 53-61.	20.2	64
76	Study of a photocatalytic process for removal of antibiotics from wastewater in a falling film photoreactor: Scavenger study and process intensification feasibility. <i>Chemical Engineering and Processing: Process Intensification</i> , 2017, 122, 213-221.	3.6	78
77	Evidence for differentiated ionic and surface contact effects driving bacterial inactivation by way of genetically modified bacteria. <i>Chemical Communications</i> , 2017, 53, 9093-9096.	4.1	12
78	Fungicidal activity of copper-sputtered flexible surfaces under dark and actinic light against azole-resistant <i>Candida albicans</i> and <i>Candida glabrata</i> . <i>Journal of Photochemistry and Photobiology B: Biology</i> , 2017, 174, 229-234.	3.8	22
79	Effect of light and oxygen on repetitive bacterial inactivation on uniform, adhesive, robust and stable Cu-polyester surfaces. <i>Journal of Advanced Oxidation Technologies</i> , 2017, 20, .	0.5	6
80	Synchronic coupling of Cu <sub>2</sub> O(p)/CuO(n) semiconductors leading to Norfloxacin degradation under visible light: Kinetics, mechanism and film surface properties. <i>Journal of Catalysis</i> , 2017, 353, 133-140.	6.2	51
81	First unambiguous evidence for distinct ionic and surface-contact effects during photocatalytic bacterial inactivation on Cu <sup>+</sup> /Ag films: Kinetics, mechanism and energetics. <i>Materials Today Chemistry</i> , 2017, 6, 62-74.	3.5	19
82	Iron oxide-mediated semiconductor photocatalysis vs. heterogeneous photo-Fenton treatment of viruses in wastewater. Impact of the oxide particle size.. <i>Journal of Hazardous Materials</i> , 2017, 339, 223-231.	12.4	111
83	Photocatalytic performance of TiO <sub>2</sub> impregnated polyester for the degradation of Reactive Green 12: Implications of the surface pretreatment and the microstructure. <i>Journal of Photochemistry and Photobiology A: Chemistry</i> , 2017, 346, 493-501.	3.9	25
84	Assessment of the correlation among antibiotic resistance, adherence to abiotic and biotic surfaces, invasion and cytotoxicity of <i>Pseudomonas aeruginosa</i> isolated from diseased gilthead sea bream. <i>Colloids and Surfaces B: Biointerfaces</i> , 2017, 158, 229-236.	5.0	12
85	Polystyrene CuO/Cu <sub>2</sub> O uniform films inducing MB-degradation under sunlight. <i>Catalysis Today</i> , 2017, 284, 77-83.	4.4	51
86	Effect of Fe(II)/Fe(III) species, pH, irradiance and bacterial presence on viral inactivation in wastewater by the photo-Fenton process: Kinetic modeling and mechanistic interpretation. <i>Applied Catalysis B: Environmental</i> , 2017, 204, 156-166.	20.2	77
87	FeOx magnetization enhancing <i>E. coli</i> inactivation by orders of magnitude on Ag-TiO <sub>2</sub> nanotubes under sunlight. <i>Applied Catalysis B: Environmental</i> , 2017, 202, 438-445.	20.2	57
88	Grafted semiconductors on PE-films leading to bacterial inactivation: Synthesis, characterization and mechanism. <i>Colloids and Surfaces A: Physicochemical and Engineering Aspects</i> , 2017, 519, 231-237.	4.7	7
89	A green solar photo-Fenton process for the elimination of bacteria and micropollutants in municipal wastewater treatment using mineral iron and natural organic acids. <i>Applied Catalysis B: Environmental</i> , 2017, 219, 538-549.	20.2	96
90	Recent Developments in Accelerated Antibacterial Inactivation on 2D Cu-Titania Surfaces under Indoor Visible Light. <i>Coatings</i> , 2017, 7, 20.	2.6	34

#	ARTICLE	IF	CITATIONS
91	Light-Assisted Advanced Oxidation Processes for the Elimination of Chemical and Microbiological Pollution of Wastewaters in Developed and Developing Countries. <i>Molecules</i> , 2017, 22, 1070.	3.8	93
92	Self-Sterilizing Sputtered Films for Applications in Hospital Facilities. <i>Molecules</i> , 2017, 22, 1074.	3.8	19
93	Synergistic Effect of Fluorinated and N Doped TiO <sub>2</sub> Nanoparticles Leading to Different Microstructure and Enhanced Photocatalytic Bacterial Inactivation. <i>Nanomaterials</i> , 2017, 7, 391.	4.1	51
94	Indoor Light Enhanced Photocatalytic Ultra-Thin Films on Flexible Non-Heat Resistant Substrates Reducing Bacterial Infection Risks. <i>Catalysts</i> , 2017, 7, 57.	3.5	39
95	Environmentally mild self-cleaning processes on textile surfaces under daylight irradiation. , 2016, , 35-54.		2
96	Uniform, adhesive, and low cytotoxic films accelerating bacterial reduction in the dark and under visible light. , 2016, , 225-260.		1
97	Stable Photocatalytic Paints Prepared from Hybrid Core-Shell Fluorinated/Acrylic/TiO <sub>2</sub> Waterborne Dispersions. <i>Crystals</i> , 2016, 6, 136.	2.2	19
98	Sputtered Gum metal thin films showing bacterial inactivation and biocompatibility. <i>Colloids and Surfaces B: Biointerfaces</i> , 2016, 146, 687-691.	5.0	12
99	<i>In Vitro</i> and <i>In Vivo</i> Effectiveness of an Innovative Silver-Copper Nanoparticle Coating of Catheters To Prevent Methicillin-Resistant <i>Staphylococcus aureus</i> Infection. <i>Antimicrobial Agents and Chemotherapy</i> , 2016, 60, 5349-5356.	3.2	37
100	New evidence for Cu-decorated binary-oxides mediating bacterial inactivation/mineralization in aerobic media. <i>Colloids and Surfaces B: Biointerfaces</i> , 2016, 144, 222-228.	5.0	18
101	Correlating microscopy techniques and ToF-SIMS analysis of fully grown mammalian oocytes. <i>Analyst</i> , The, 2016, 141, 4121-4129.	3.5	21
102	A New Perspective in the Use of FeOx-TiO <sub>2</sub> Photocatalytic Films: Indole Degradation in the Absence of Fe-Leaching. <i>Journal of Catalysis</i> , 2016, 342, 184-192.	6.2	17
103	Sputtered Cu-polyethylene films inducing bacteria inactivation in the dark and under low intensity sunlight. <i>Journal of Photochemistry and Photobiology A: Chemistry</i> , 2016, 330, 163-168.	3.9	3
104	Innovative self-sterilizing transparent Fe <sup>2+</sup> -phosphate polyethylene films under visible light. <i>RSC Advances</i> , 2016, 6, 77066-77074.	3.6	2
105	FeOx-TiO <sub>2</sub> Film with Different Microstructures Leading to Femtosecond Transients with Different Properties: Biological Implications under Visible Light. <i>Scientific Reports</i> , 2016, 6, 30113.	3.3	17
106	Microstructure of Cu <sup>2+</sup> -Ag Uniform Nanoparticulate Films on Polyurethane 3D Catheters: Surface Properties. <i>ACS Applied Materials &amp; Interfaces</i> , 2016, 8, 56-63.	8.0	56
107	Supported TiO <sub>2</sub> films deposited at different energies: Implications of the surface compactness on the catalytic kinetics.. <i>Applied Catalysis B: Environmental</i> , 2016, 191, 42-52.	20.2	46
108	Bactericidal activity and mechanism of action of copper-sputtered flexible surfaces against multidrug-resistant pathogens. <i>Applied Microbiology and Biotechnology</i> , 2016, 100, 5945-5953.	3.6	25

#	ARTICLE	IF	CITATIONS
109	Castles fall from inside: Evidence for dominant internal photo-catalytic mechanisms during treatment of <i>Saccharomyces cerevisiae</i> by photo-Fenton at near-neutral pH. <i>Applied Catalysis B: Environmental</i> , 2016, 185, 150-162.	20.2	53
110	Quasi-Instantaneous Bacterial Inactivation on Cu–Ag Nanoparticulate 3D Catheters in the Dark and Under Light: Mechanism and Dynamics. <i>ACS Applied Materials &amp; Interfaces</i> , 2016, 8, 47-55.	8.0	51
111	Insight on the photocatalytic bacterial inactivation by co-sputtered TiO <sub>2</sub> –Cu in aerobic and anaerobic conditions. <i>Applied Catalysis B: Environmental</i> , 2016, 182, 277-285.	20.2	49
112	Accelerated self-cleaning by Cu promoted semiconductor binary-oxides under low intensity sunlight irradiation. <i>Applied Catalysis B: Environmental</i> , 2016, 180, 648-655.	20.2	18
113	Preparation and Mechanism of Cu-Decorated TiO <sub>2</sub> –ZrO <sub>2</sub> Films Showing Accelerated Bacterial Inactivation. <i>ACS Applied Materials &amp; Interfaces</i> , 2015, 7, 12832-12839.	8.0	68
114	Light wavelength-dependent <i>E. coli</i> survival changes after simulated solar disinfection of secondary effluent. <i>Photochemical and Photobiological Sciences</i> , 2015, 14, 2238-2250.	2.9	12
115	Effect of surface pretreatment of TiO <sub>2</sub> films on interfacial processes leading to bacterial inactivation in the dark and under light irradiation. <i>Interface Focus</i> , 2015, 5, 20140046.	3.0	36
116	Duality in the <i>Escherichia coli</i> and methicillin resistant <i>Staphylococcus aureus</i> reduction mechanism under actinic light on innovative co-sputtered surfaces. <i>Applied Catalysis A: General</i> , 2015, 498, 185-191.	4.3	21
117	Accelerated bacterial reduction on Ag–TaN compared with Ag–ZrN and Ag–TiN surfaces. <i>Applied Catalysis B: Environmental</i> , 2015, 174-175, 376-382.	20.2	26
118	Novel FeOx–polyethylene transparent films: synthesis and mechanism of surface regeneration. <i>RSC Advances</i> , 2015, 5, 80203-80211.	3.6	25
119	New evidence for hybrid acrylic/TiO <sub>2</sub> films inducing bacterial inactivation under low intensity simulated sunlight. <i>Colloids and Surfaces B: Biointerfaces</i> , 2015, 135, 1-7.	5.0	34
120	Innovative photocatalyst (FeO <sub>x</sub> –TiO <sub>2</sub> ): transients induced by femtosecond laser pulse leading to bacterial inactivation under visible light. <i>RSC Advances</i> , 2015, 5, 101751-101759.	3.6	22
121	Antibacterial surfaces based on functionally graded photocatalytic Fe <sub>3</sub> O <sub>4</sub> @TiO <sub>2</sub> core–shell nanoparticle/epoxy composites. <i>RSC Advances</i> , 2015, 5, 105416-105421.	3.6	16
122	Kinetics and mechanism for transparent polyethylene-TiO <sub>2</sub> films mediated self-cleaning leading to MB dye discoloration under sunlight irradiation. <i>Applied Catalysis B: Environmental</i> , 2015, 162, 236-244.	20.2	73
123	New evidence for TiO <sub>2</sub> uniform surfaces leading to complete bacterial reduction in the dark: Critical issues. <i>Colloids and Surfaces B: Biointerfaces</i> , 2014, 123, 593-599.	5.0	45
124	TiO <sub>2</sub> and TiO <sub>2</sub> -Doped Films Able to Kill Bacteria by Contact: New Evidence for the Dynamics of Bacterial Inactivation in the Dark and under Light Irradiation. <i>International Journal of Photoenergy</i> , 2014, 2014, 1-17.	2.5	19
125	Uniform TiO <sub>2</sub> /In <sub>2</sub> O <sub>3</sub> surface films effective in bacterial inactivation under visible light. <i>Journal of Photochemistry and Photobiology A: Chemistry</i> , 2014, 279, 1-7.	3.9	24
126	Accelerated <i>Escherichia coli</i> inactivation in the dark on uniform copper flexible surfaces. <i>Biointerphases</i> , 2014, 9, 029012.	1.6	17
