| #  | Article                                                                                                                                                                                                                             | IF   | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Microbial Fuel Cells: Methodology and Technologyâ€. Environmental Science & Technology, 2006,<br>40, 5181-5192.                                                                                                                     | 10.0 | 4,962     |
| 2  | The anode potential regulates bacterial activity in microbial fuel cells. Applied Microbiology and Biotechnology, 2008, 78, 409-418.                                                                                                | 3.6  | 350       |
| 3  | Modeling of CO2 capture by aqueous monoethanolamine. AICHE Journal, 2003, 49, 1676-1686.                                                                                                                                            | 3.6  | 302       |
| 4  | Effects of Surface Charge and Hydrophobicity on Anodic Biofilm Formation, Community Composition,<br>and Current Generation in Bioelectrochemical Systems. Environmental Science & Technology,<br>2013, 47, 7563-7570.               | 10.0 | 294       |
| 5  | Cathodic oxygen reduction catalyzed by bacteria in microbial fuel cells. ISME Journal, 2008, 2, 519-527.                                                                                                                            | 9.8  | 268       |
| 6  | Non-catalyzed cathodic oxygen reduction at graphite granules in microbial fuel cells. Electrochimica<br>Acta, 2007, 53, 598-603.                                                                                                    | 5.2  | 250       |
| 7  | High Acetic Acid Production Rate Obtained by Microbial Electrosynthesis from Carbon Dioxide.<br>Environmental Science & Technology, 2015, 49, 13566-13574.                                                                          | 10.0 | 241       |
| 8  | A novel carbon nanotube modified scaffold as an efficient biocathode material for improved microbial electrosynthesis. Journal of Materials Chemistry A, 2014, 2, 13093-13102.                                                      | 10.3 | 236       |
| 9  | Electron and Carbon Balances in Microbial Fuel Cells Reveal Temporary Bacterial Storage Behavior<br>During Electricity Generation. Environmental Science & Technology, 2007, 41, 2915-2921.                                         | 10.0 | 231       |
| 10 | A Basic Tutorial on Cyclic Voltammetry for the Investigation of Electroactive Microbial Biofilms.<br>Chemistry - an Asian Journal, 2012, 7, 466-475.                                                                                | 3.3  | 189       |
| 11 | Microbial fuel cells operating on mixed fatty acids. Bioresource Technology, 2010, 101, 1233-1238.                                                                                                                                  | 9.6  | 188       |
| 12 | Syntrophic Processes Drive the Conversion of Glucose in Microbial Fuel Cell Anodes. Environmental<br>Science & Technology, 2008, 42, 7937-7943.                                                                                     | 10.0 | 186       |
| 13 | Sequential anode–cathode configuration improves cathodic oxygen reduction and effluent quality of microbial fuel cells. Water Research, 2008, 42, 1387-1396.                                                                        | 11.3 | 181       |
| 14 | Microbial Electrosynthesis of Isobutyric, Butyric, Caproic Acids, and Corresponding Alcohols from Carbon Dioxide. ACS Sustainable Chemistry and Engineering, 2018, 6, 8485-8493.                                                    | 6.7  | 174       |
| 15 | Source-separated urine opens golden opportunities for microbial electrochemical technologies.<br>Trends in Biotechnology, 2015, 33, 214-220.                                                                                        | 9.3  | 156       |
| 16 | Electron transfer pathways in microbial oxygen biocathodes. Electrochimica Acta, 2010, 55, 813-818.                                                                                                                                 | 5.2  | 151       |
| 17 | Lactococcus lactis catalyses electricity generation at microbial fuel cell anodes via excretion of a soluble quinone. Bioelectrochemistry, 2009, 76, 14-18.                                                                         | 4.6  | 144       |
| 18 | Bringing High-Rate, CO <sub>2</sub> -Based Microbial Electrosynthesis Closer to Practical<br>Implementation through Improved Electrode Design and Operating Conditions. Environmental Science<br>& Technology, 2016, 50, 1982-1989. | 10.0 | 141       |

STEFANO FREGUIA

| #  | Article                                                                                                                                                                                      | IF   | CITATIONS |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Flame Oxidation of Stainless Steel Felt Enhances Anodic Biofilm Formation and Current Output in<br>Bioelectrochemical Systems. Environmental Science & Technology, 2014, 48, 7151-7156.      | 10.0 | 131       |
| 20 | Biologically Induced Hydrogen Production Drives High Rate/High Efficiency Microbial Electrosynthesis of Acetate from Carbon Dioxide. ChemElectroChem, 2016, 3, 581-591.                      | 3.4  | 122       |
| 21 | Recovering Nitrogen as a Solid without Chemical Dosing: Bio-Electroconcentration for Recovery of Nutrients from Urine. Environmental Science and Technology Letters, 2017, 4, 119-124.       | 8.7  | 96        |
| 22 | Flavins contained in yeast extract are exploited for anodic electron transfer by Lactococcus lactis.<br>Bioelectrochemistry, 2010, 78, 173-175.                                              | 4.6  | 87        |
| 23 | Carbon and Electron Fluxes during the Electricity Driven 1,3-Propanediol Biosynthesis from Glycerol.<br>Environmental Science & Technology, 2013, 47, 11199-11205.                           | 10.0 | 86        |
| 24 | Electrochemical Abatement of Hydrogen Sulfide from Waste Streams. Critical Reviews in Environmental Science and Technology, 2015, 45, 1555-1578.                                             | 12.8 | 75        |
| 25 | Autotrophic hydrogen-producing biofilm growth sustained by a cathode as the sole electron and energy source. Bioelectrochemistry, 2015, 102, 56-63.                                          | 4.6  | 71        |
| 26 | A novel bioelectrochemical system for chemical-free permanent treatment of acid mine drainage.<br>Water Research, 2017, 126, 411-420.                                                        | 11.3 | 60        |
| 27 | Microbial electrosynthesis system with dual biocathode arrangement for simultaneous acetogenesis, solventogenesis and carbon chain elongation. Chemical Communications, 2019, 55, 4351-4354. | 4.1  | 60        |
| 28 | Wastewater fertigation in agriculture: Issues and opportunities for improved water management and circular economy. Environmental Pollution, 2022, 296, 118755.                              | 7.5  | 58        |
| 29 | Bioelectrochemical systems: Microbial versus enzymatic catalysis. Electrochimica Acta, 2012, 82,<br>165-174.                                                                                 | 5.2  | 57        |
| 30 | Microbial nanowires – Electron transport and the role of synthetic analogues. Acta Biomaterialia,<br>2018, 69, 1-30.                                                                         | 8.3  | 51        |
| 31 | Oxidised stainless steel: a very effective electrode material for microbial fuel cell bioanodes but at<br>high risk of corrosion. Electrochimica Acta, 2015, 158, 356-360.                   | 5.2  | 47        |
| 32 | Surfactant treatment of carbon felt enhances anodic microbial electrocatalysis in bioelectrochemical systems. Electrochemistry Communications, 2014, 39, 1-4.                                | 4.7  | 46        |
| 33 | Spontaneous modification of carbon surface with neutral red from its diazonium salts for bioelectrochemical systems. Biosensors and Bioelectronics, 2013, 47, 184-189.                       | 10.1 | 37        |
| 34 | Self-Powered Bioelectrochemical Nutrient Recovery for Fertilizer Generation from Human Urine.<br>Sustainability, 2019, 11, 5490.                                                             | 3.2  | 36        |
| 35 | Electro-fermentation: Sustainable bioproductions steered by electricity. Biotechnology Advances, 2022, 59, 107950.                                                                           | 11.7 | 36        |
| 36 | Enhancing Toxic Metal Removal from Acidified Sludge with Nitrite Addition. Environmental Science<br>& Technology, 2015, 49, 6257-6263.                                                       | 10.0 | 35        |

| #  | Article                                                                                                                                                                                                                      | IF   | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 37 | <i>Methanobacterium</i> enables high rate electricity-driven autotrophic sulfate reduction. RSC<br>Advances, 2015, 5, 89368-89374.                                                                                           | 3.6  | 35        |
| 38 | Development of bioelectrocatalytic activity stimulates mixedâ€culture reduction of glycerol in a bioelectrochemical system. Microbial Biotechnology, 2015, 8, 483-489.                                                       | 4.2  | 34        |
| 39 | Effects of oxygen on Shewanella decolorationis NTOU1 electron transfer to carbon-felt electrodes.<br>Biosensors and Bioelectronics, 2010, 25, 2651-2656.                                                                     | 10.1 | 33        |
| 40 | Urine Treatment on the International Space Station: Current Practice and Novel Approaches.<br>Membranes, 2020, 10, 327.                                                                                                      | 3.0  | 33        |
| 41 | Dynamically Adaptive Control System for Bioanodes in Serially Stacked Bioelectrochemical Systems.<br>Environmental Science & Technology, 2013, 47, 5488-5494.                                                                | 10.0 | 31        |
| 42 | Impact of source-separation of urine on effluent quality, energy consumption and greenhouse gas<br>emissions of a decentralized wastewater treatment plant. Chemical Engineering Research and Design,<br>2021, 150, 298-304. | 5.6  | 31        |
| 43 | Nutrient Recovery by Bio-Electroconcentration is Limited by Wastewater Conductivity. ACS Omega, 2019, 4, 2152-2159.                                                                                                          | 3.5  | 29        |
| 44 | Modelling recovery of ammonium from urine by electro-concentration in a 3-chamber cell. Water Research, 2017, 124, 210-218.                                                                                                  | 11.3 | 28        |
| 45 | Electrochemical oxidation processes for PFAS removal from contaminated water and wastewater:<br>fundamentals, gaps and opportunities towards practical implementation. Journal of Hazardous<br>Materials, 2022, 434, 128886. | 12.4 | 28        |
| 46 | Cathodic biofilm activates electrode surface and achieves efficient autotrophic sulfate reduction.<br>Electrochimica Acta, 2016, 213, 66-74.                                                                                 | 5.2  | 27        |
| 47 | Dissimilatory nitrate reduction to ammonium as an electron sink during cathodic denitrification. RSC Advances, 2015, 5, 86572-86577.                                                                                         | 3.6  | 25        |
| 48 | Electro-concentration for chemical-free nitrogen capture as solid ammonium bicarbonate. Separation and Purification Technology, 2018, 203, 48-55.                                                                            | 7.9  | 24        |
| 49 | Selective cathodic microbial biofilm retention allows a high current-to-sulfide efficiency in sulfate-reducing microbial electrolysis cells. Bioelectrochemistry, 2017, 118, 62-69.                                          | 4.6  | 22        |
| 50 | Optimising nitrogen recovery from reject water in a 3-chamber bioelectroconcentration cell.<br>Separation and Purification Technology, 2021, 264, 118428.                                                                    | 7.9  | 22        |
| 51 | Recovery of elemental sulfur with a novel integrated bioelectrochemical system with an electrochemical cell. Science of the Total Environment, 2019, 677, 175-183.                                                           | 8.0  | 20        |
| 52 | Electrochemical biofilm control by reconstructing microbial community in agricultural water distribution systems. Journal of Hazardous Materials, 2021, 403, 123616.                                                         | 12.4 | 20        |
| 53 | Biomimetic Peptide Nanowires Designed for Conductivity. ACS Omega, 2019, 4, 1748-1756.                                                                                                                                       | 3.5  | 19        |
| 54 | Staged electrochemical treatment guided by modelling allows for targeted recovery of metals and rare earth elements from acid mine drainage. Journal of Environmental Management, 2020, 275, 111266.                         | 7.8  | 19        |
