#	ARTICLE	IF	CITATIONS
1	Challenging a hostâ€™ pathogen paradigm: Susceptibility to chytridiomycosis is decoupled from genetic erosion. <i>Journal of Evolutionary Biology</i> , 2022, 35, 589-598.	1.7	1
2	Bringing together approaches to reporting on within species genetic diversity. <i>Journal of Applied Ecology</i> , 2022, 59, 2227-2233.	4.0	24
3	A development approach to conservation leads to informed habitat design and rapid establishment of amphibian communities. <i>Ecological Solutions and Evidence</i> , 2021, 2, e12038.	2.0	10
4	Exploring the potential for â€™Gene Conservation Unitsâ€™™ to conserve genetic diversity in wild populations. <i>Ecological Solutions and Evidence</i> , 2021, 2, e12061.	2.0	8
5	Quantifying the differences in avian attack rates on reptiles between an infrastructure and a control site. <i>European Journal of Wildlife Research</i> , 2020, 66, 1.	1.4	2
6	Evaluating the validity of a simple citizen science index for assessing the ecological status of urban drainage ponds. <i>Ecological Indicators</i> , 2019, 98, 1-8.	6.3	12
7	Is the introduction of novel exotic forest tree species a rational response to rapid environmental change? â€™ A British perspective. <i>Forest Ecology and Management</i> , 2019, 432, 718-728.	3.2	37
8	Seed limitation, not soil legacy effects, prevents native understorey from establishing in oak woodlands in Scotland after removal of <i>Rhododendron ponticum</i> . <i>Restoration Ecology</i> , 2018, 26, 865-872.	2.9	10
9	Understorey plant community composition reflects invasion history decades after invasive <i>Rhododendron</i> has been removed. <i>Journal of Applied Ecology</i> , 2018, 55, 874-884.	4.0	21
10	Invasion by <i>Rhododendron ponticum</i> depletes the native seed bank with long-term impacts after its removal. <i>Biological Invasions</i> , 2018, 20, 375-384.	2.4	10
11	Links between ecological and human wealth in drainage ponds in a fast-expanding city, and proposals for design and management. <i>Landscape and Urban Planning</i> , 2018, 180, 93-102.	7.5	16
12	The epiphytic bryophyte community of Atlantic oak woodlands shows clear signs of recovery following the removal of invasive <i>Rhododendron ponticum</i> . <i>Biological Conservation</i> , 2017, 212, 96-104.	4.1	4
13	Habitat requirements and conservation needs of peripheral populations: the case of the great crested newt (<i>Triturus cristatus</i>) in the Scottish Highlands. <i>Hydrobiologia</i> , 2017, 792, 169-181.	2.0	23
14	Testing the validity of a commonly-used habitat suitability index at the edge of a speciesâ€™™ range: great crested newt <i>Triturus cristatus</i> in Scotland. <i>Amphibia - Reptilia</i> , 2017, 38, 265-273.	0.5	9
15	A comparison of the resilience of four habitats to fire, and the implications of changes in community composition for conservation: a case study from the Serra de Monchique, Portugal. <i>Plant Ecology and Diversity</i> , 2009, 2, 45-56.	2.4	17
16	The ancient woodland concept as a practical conservation tool in Great Britain. <i>Journal for Nature Conservation</i> , 2007, 15, 109-119.	1.8	55
