#	ARTICLE	IF	CITATIONS
1	The isotopic (He, Ne, Sr, Nd, Hf, Pb) signature in the Indian Mantle over 8.8ÂMa. <i>Chemical Geology</i> , 2020, 550, 119741.	3.3	2
2	The origin of continental carbonates in Andean salars: A multi-tracer geochemical approach in Laguna Pastos Grandes (Bolivia). <i>Geochimica Et Cosmochimica Acta</i> , 2020, 279, 220-237.	3.9	9
3	Xenon Isotopes Identify Large-scale Nucleosynthetic Heterogeneities across the Solar System. <i>Astrophysical Journal</i> , 2020, 889, 68.	4.5	8
4	Noble gas systematics in new popping rocks from the Mid-Atlantic Ridge (14Â°N): Evidence for small-scale upper mantle heterogeneities. <i>Earth and Planetary Science Letters</i> , 2019, 519, 70-82.	4.4	13
5	Unusual neon isotopic composition in Neoproterozoic sedimentary rocks: Fluorine bearing mineral contribution or trace of an impact event?. <i>Chemical Geology</i> , 2019, 520, 52-59.	3.3	0
6	Noble Gas Constraints on the Origin of the Azores Hotspot. <i>Active Volcanoes of the World</i> , 2018, , 281-299.	1.4	4
7	Origin of Light Noble Gases (He, Ne, and Ar) on Earth: A Review. <i>Geochemistry, Geophysics, Geosystems</i> , 2018, 19, 979-996.	2.5	20
8	The stable strontium isotopic composition of ocean island basalts, mid-ocean ridge basalts, and komatiites. <i>Chemical Geology</i> , 2018, 483, 595-602.	3.3	26
9	Atmospheric noble gases in Mid-Ocean Ridge Basalts: Identification of atmospheric contamination processes. <i>Geochimica Et Cosmochimica Acta</i> , 2018, 222, 253-268.	3.9	7
10	Effective radium-226 concentration in meteorites. <i>Geochimica Et Cosmochimica Acta</i> , 2017, 208, 198-219.	3.9	10
11	Primordial atmosphere incorporation in planetary embryos and the origin of Neon in terrestrial planets. <i>Icarus</i> , 2017, 293, 199-205.	2.5	14
12	Geochemical systematics of Pb isotopes, fluorine, and sulfur in melt inclusions from SĂo Miguel, Azores. <i>Chemical Geology</i> , 2017, 458, 22-37.	3.3	17
13	The 2014â€15 eruption and the short-term geochemical evolution of the Fogo volcano (Cape Verde): Evidence for small-scale mantle heterogeneity. <i>Lithos</i> , 2017, 288-289, 91-107.	1.4	68
14	The 1998â€2001 submarine lava balloon eruption at the Serreta ridge (Azores archipelago): Constraints from volcanic facies architecture, isotope geochemistry and magnetic data. <i>Journal of Volcanology and Geothermal Research</i> , 2017, 329, 13-29.	2.1	8
15	Solar wind implantation supplied light volatiles during the frst stage of Earth accretion. <i>Geochemical Perspectives Letters</i> , 2017, , 151-159.	5.0	23
16	Neon isotopic composition of the mantle constrained by single vesicle analyses. <i>Earth and Planetary Science Letters</i> , 2016, 449, 145-154.	4.4	31
17	Silicon isotopes reveal recycled altered oceanic crust in the mantle sources of Ocean Island Basalts. <i>Geochimica Et Cosmochimica Acta</i> , 2016, 189, 282-295.	3.9	32
18	Estimation of the extraterrestrial ³ He and ²⁰ Ne fluxes on Earth from He and Ne systematics in marine sediments. <i>Earth and Planetary Science Letters</i> , 2016, 436, 10-18.	4.4	4

#	ARTICLE	IF	CITATIONS
19	The origin of the neon isotopes in chondrites and on Earth. <i>Earth and Planetary Science Letters</i> , 2016, 433, 249-256.	4.4	33
20	A $^4\text{He}/^3\text{He}$ mantle material detected under the East Pacific Rise ($15^{\circ}42'\text{N}$). <i>Geophysical Research Letters</i> , 2015, 42, 1375-1383.	4.0	9
21	Constraints on the noble gas composition of the deep mantle by bubble-by-bubble analysis of a volcanic glass sample from Iceland. <i>Chemical Geology</i> , 2015, 417, 173-183.	3.3	20
22	Constraints on the DUPAL anomaly from helium isotope systematics in the Southwest Indian mid-ocean ridge basalts. <i>Chemical Geology</i> , 2015, 417, 163-172.	3.3	12
23	Helium isotope systematics in the vicinity of the Azores triple junction: Constraints on the Azores geodynamics. <i>Chemical Geology</i> , 2014, 372, 62-71.	3.3	14
24	Is the Azores Hotspot a Wetspot? Insights from the Geochemistry of Fluid and Melt Inclusions in Olivine of Pico Basalts. <i>Journal of Petrology</i> , 2014, 55, 377-393.	2.8	93
25	The nature of Earth's building blocks as revealed by calcium isotopes. <i>Earth and Planetary Science Letters</i> , 2014, 394, 135-145.	4.4	129
26	Sulfur isotope budget (^{32}S , ^{33}S , ^{34}S and ^{36}S) in Pacific Antarctic ridge basalts: A record of mantle source heterogeneity and hydrothermal sulfide assimilation. <i>Geochimica Et Cosmochimica Acta</i> , 2014, 133, 47-67.	3.9	95
27	The Syabru Beni hydrothermal system in central Nepal: 1. Characterization of carbon dioxide and radon fluxes. <i>Journal of Geophysical Research: Solid Earth</i> , 2014, 119, 4017-4055.	3.4	45
28	Geochemical heterogeneities within the Crozet hotspot. <i>Earth and Planetary Science Letters</i> , 2013, 376, 126-136.	4.4	37
29	Carbon and helium isotopes in thermal springs of La Soufrière volcano (Guadeloupe, Lesser Antilles): Implications for volcanological monitoring. <i>Chemical Geology</i> , 2013, 359, 70-80.	3.3	27
30	Non-chondritic sulphur isotope composition of the terrestrial mantle. <i>Nature</i> , 2013, 501, 208-211.	27.8	195
31	Noble gas constraints on the origin and evolution of Earth's volatiles. <i>Geochemical Perspectives</i> , 2013, 2, 229-403.	4.5	109
32	Geochemical temporal evolution of Brava Island magmatism: Constraints on the variability of Cape Verde mantle sources and on carbonate-silicate magma link. <i>Chemical Geology</i> , 2012, 334, 44-61.	3.3	34
33	Helium and neon isotopes in São Miguel island basalts, Azores Archipelago: New constraints on the low ^3He -hotspot origin. <i>Chemical Geology</i> , 2012, 322-323, 91-98.	3.3	30
34	Noble gas isotopes in hydrothermal volcanic fluids of La Soufrière volcano, Guadeloupe, Lesser Antilles arc. <i>Chemical Geology</i> , 2012, 304-305, 158-165.	3.3	26
35	Primary and secondary processes constraining the noble gas isotopic signatures of carbonatites and silicate rocks from Brava Island: evidence for a lower mantle origin of the Cape Verde plume. <i>Contributions To Mineralogy and Petrology</i> , 2012, 163, 995-1009.	3.1	18
36	Rare gas systematics on Lucky Strike basalts (37°N , North Atlantic): Evidence for efficient homogenization in a long-lived magma chamber system?. <i>Geophysical Research Letters</i> , 2011, 38, n/a-n/a.	4.0	18

#	ARTICLE	IF	CITATIONS
37	Geochemical portray of the Pacific Ridge: New isotopic data and statistical techniques. Earth and Planetary Science Letters, 2011, 302, 154-162.	4.4	43
38	Volatiles in the atmosphere of Mars: The effects of volcanism and escape constrained by isotopic data. Earth and Planetary Science Letters, 2011, 303, 299-309.	4.4	32
39	Crystallization of a basal magma ocean recorded by Helium and Neon. Earth and Planetary Science Letters, 2011, 308, 193-199.	4.4	58
40	THREE-DIMENSIONAL LAGRANGIAN TURBULENT DIFFUSION OF DUST GRAINS IN A PROTOPLANETARY DISK: METHOD AND FIRST APPLICATIONS. Astrophysical Journal, 2011, 737, 33.	4.5	38
41	Magma degassing process during Plinian eruptions. Journal of Volcanology and Geothermal Research, 2010, 192, 142-150.	2.1	12
42	Quaternary extrusive calciocarbonatite volcanism on Brava Island (Cape Verde): A nephelinite-carbonatite immiscibility product. Journal of African Earth Sciences, 2010, 56, 59-74.	2.0	42
43	Rare gases in lavas from the ultraslow spreading Lena Trough, Arctic Ocean. Geochemistry, Geophysics, Geosystems, 2010, 11, .	2.5	7
44	Geochemical constraints on depth of origin of oceanic carbonatites: The Cape Verde case. Geochimica Et Cosmochimica Acta, 2010, 74, 7261-7282.	3.9	40
45	Noble gas and carbon isotopic signatures of Cape Verde oceanic carbonatites: Implications for carbon provenance. Earth and Planetary Science Letters, 2010, 291, 70-83.	4.4	41
46	The chemical composition of the Earth: Enstatite chondrite models. Earth and Planetary Science Letters, 2010, 293, 259-268.	4.4	363
47	Kronos: exploring the depths of Saturn with probes and remote sensing through an international mission. Experimental Astronomy, 2009, 23, 947-976.	3.7	10
48	The present-day atmosphere of Mars: Where does it come from?. Earth and Planetary Science Letters, 2009, 277, 384-393.	4.4	22
49	Primitive neon from the center of the Galpagos hotspot. Earth and Planetary Science Letters, 2009, 286, 23-34.	4.4	107
50	Atmospheric $^{38}\text{Ar}/^{36}\text{Ar}$ in the mantle: Implications for the nature of the terrestrial parent bodies. Earth and Planetary Science Letters, 2009, 287, 551-558.	4.4	62
51	Helium isotopes on the Pacific Antarctic ridge (52.541.5S). Geophysical Research Letters, 2008, 35, .	4.0	17
52	He, Ne and Ar systematics in single vesicles: Mantle isotopic ratios and origin of the air component in basaltic glasses. Earth and Planetary Science Letters, 2008, 274, 142-150.	4.4	41
53	Constraints on the origin of the ^{129}Xe on Earth using the tellurium double beta decay. Earth and Planetary Science Letters, 2007, 264, 114-122.	4.4	3
54	The origin of rare gases on Earth: The noble gas "subduction barrier" revisited. Comptes Rendus - Geoscience, 2007, 339, 937-945.	1.2	16

#	ARTICLE	IF	CITATIONS
55	Primitive neon and helium isotopic compositions of high-MgO basalts from the Kerguelen Archipelago, Indian Ocean. <i>Earth and Planetary Science Letters</i> , 2006, 241, 65-79.	4.4	11
56	Reply to: "Recycled" volatiles in mantle derived diamonds" Evidence from nitrogen and noble gas isotopic data. <i>Earth and Planetary Science Letters</i> , 2006, 252, 220-222.	4.4	0
57	He, Ne and Ar composition of the European lithospheric mantle. <i>Chemical Geology</i> , 2005, 217, 97-112.	3.3	124
58	Os isotope systematics in Fogo Island: Evidence for lower continental crust fragments under the Cape Verde Southern Islands. <i>Chemical Geology</i> , 2005, 219, 93-113.	3.3	83
59	Correlated helium, neon, and melt production on the super-fast spreading East Pacific Rise near 17°S. <i>Earth and Planetary Science Letters</i> , 2005, 232, 125-142.	4.4	59
60	Primitive neon isotopes in Terceira Island (Azores archipelago). <i>Earth and Planetary Science Letters</i> , 2005, 233, 429-440.	4.4	57
61	Evidence for a mantle component shown by rare gases, C and N isotopes in polycrystalline diamonds from Orapa (Botswana). <i>Earth and Planetary Science Letters</i> , 2005, 240, 559-572.	4.4	30
62	Cosmogenic helium and neon in 11 Myr old ultramafic xenoliths: Consequences for mantle signatures in old samples. <i>Geochemistry, Geophysics, Geosystems</i> , 2005, 6, n/a-n/a.	2.5	23
63	Helium isotopes on the Macdonald seamount (Austral chain): constraints on the origin of the superswell. <i>Comptes Rendus - Geoscience</i> , 2004, 336, 983-990.	1.2	11
64	Rare gas systematics and the origin of oceanic islands: the key role of entrainment at the 670 km boundary layer. <i>Earth and Planetary Science Letters</i> , 2004, 228, 85-92.	4.4	32
65	Re-interpretation of the existence of a primitive plume under Australia based on neon isotope fractionation during step heating. <i>Terra Nova</i> , 2003, 15, 36-39.	2.1	3
66	Pb-Sr-He isotope and trace element geochemistry of the Cape Verde Archipelago. <i>Geochimica Et Cosmochimica Acta</i> , 2003, 67, 3717-3733.	3.9	123
67	He and Ne isotopes in oceanic crust: implications for noble gas recycling in the mantle. <i>Earth and Planetary Science Letters</i> , 2003, 216, 635-643.	4.4	43
68	Vesiculation and vesicle loss in mid-ocean ridge basalt glasses: He, Ne, Ar elemental fractionation and pressure influence. <i>Geochimica Et Cosmochimica Acta</i> , 2002, 66, 1449-1458.	3.9	60
69	Rare gas systematics on Mid Atlantic Ridge (37°-40°N). <i>Earth and Planetary Science Letters</i> , 2002, 198, 401-416.	4.4	60
70	Helium signature of the subcontinental lithospheric mantle. <i>Earth and Planetary Science Letters</i> , 2002, 199, 39-47.	4.4	260
71	Subducted oceanic lithosphere and the origin of the "high $\delta^{4}\text{He}$ " basalt helium isotopic signature. <i>Earth and Planetary Science Letters</i> , 2001, 189, 49-57.	4.4	69
72	Solar neon in the Icelandic mantle: new evidence for an undegassed lower mantle. <i>Earth and Planetary Science Letters</i> , 2001, 185, 15-23.	4.4	115

#	ARTICLE	IF	CITATIONS
73	Noble gas constraints on degassing processes. Earth and Planetary Science Letters, 2000, 176, 375-386.	4.4	106
74	Rare gas systematics on the southernmost Mid-Atlantic Ridge: Constraints on the lower mantle and the Dupal source. Journal of Geophysical Research, 2000, 105, 5973-5996.	3.3	118
75	Argon-Lead Isotopic Correlation in Mid-Atlantic Ridge Basalts. Science, 1999, 283, 666-668.	12.6	74
76	Helium and lead isotope geochemistry of the Azores Archipelago. Earth and Planetary Science Letters, 1999, 169, 189-205.	4.4	127
77	Helium-neon systematics and the structure of the mantle. Chemical Geology, 1998, 147, 53-59.	3.3	70
78	Rare Gas Systematics in Popping Rock: Isotopic and Elemental Compositions in the Upper Mantle. Science, 1998, 279, 1178-1181.	12.6	366
79	Rare gas systematics in Red Sea Ridge basalts. Geophysical Research Letters, 1996, 23, 2453-2456.	4.0	57
80	A primitive plume neon component in MORB: The Shona ridge-anomaly, South Atlantic (51°-52°S). Earth and Planetary Science Letters, 1995, 133, 367-377.	4.4	113
81	$4\text{He}/^3\text{He}$ dispersion and mantle convection. Geophysical Research Letters, 1995, 22, 2325-2328.	4.0	108
82	The xenon isotopic signature of the mantle beneath Massif Central. Geochemical Perspectives Letters, 0, , 28-32.	5.0	20
83	Onset of volatile recycling into the mantle determined by xenon anomalies. Geochemical Perspectives Letters, 0, , 21-25.	5.0	27
