#	ARTICLE	IF	CITATIONS
1	Cutting Edge: Neutrophil Granulocyte Serves as a Vector for <i>Leishmania</i> Entry into Macrophages. <i>Journal of Immunology</i> , 2004, 173, 6521-6525.	0.8	382
2	Lymphocyte Circadian Clocks Control Lymph Node Trafficking and Adaptive Immune Responses. <i>Immunity</i> , 2017, 46, 120-132.	14.3	324
3	IL-4-deficient Balb/c mice resist infection with <i>Leishmania major</i> . <i>Journal of Experimental Medicine</i> , 1996, 184, 1127-1136.	8.5	255
4	Inhibition of the Spontaneous Apoptosis of Neutrophil Granulocytes by the Intracellular Parasite <i>Leishmania major</i> . <i>Journal of Immunology</i> , 2002, 169, 898-905.	0.8	247
5	<i>Chlamydia pneumoniae</i> Infection in Circulating Human Monocytes Is Refractory to Antibiotic Treatment. <i>Circulation</i> , 2001, 103, 351-356.	1.6	241
6	T-T Cell Interactions during Cytotoxic T Lymphocyte (CTL) Responses: T Cell Derived Helper Factor (Interleukin 2) as a Probe to Analyze CTL Responsiveness and Thymic Maturation of CTL Progenitors. <i>Immunological Reviews</i> , 1980, 51, 215-255.	6.0	224
7	Neutrophil granulocytes – Trojan horses for <i>Leishmania major</i> and other intracellular microbes?. <i>Trends in Microbiology</i> , 2003, 11, 210-214.	7.7	213
8	Immobilized Immune Complexes Induce Neutrophil Extracellular Trap Release by Human Neutrophil Granulocytes via Fc γ RIIIb and Mac-1. <i>Journal of Immunology</i> , 2014, 193, 1954-1965.	0.8	210
9	The Impact of Various Reactive Oxygen Species on the Formation of Neutrophil Extracellular Traps. <i>Mediators of Inflammation</i> , 2012, 2012, 1-10.	3.0	194
10	Tumor necrosis factor- α in combination with interferon- γ , but not with interleukin 4 activates murine macrophages for elimination of <i>Leishmania major</i> amastigotes. <i>European Journal of Immunology</i> , 1990, 20, 1131-1135.	2.9	185
11	<i>Leishmania</i> disease development depends on the presence of apoptotic promastigotes in the virulent inoculum. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2006, 103, 13837-13842.	7.1	179
12	Invasion, control and persistence of <i>Leishmania</i> parasites. <i>Current Opinion in Immunology</i> , 1996, 8, 517-525.	5.5	175
13	The Host Response to <i>Leishmania</i> Infection. <i>Advances in Immunology</i> , 1999, 74, 275-317.	2.2	162
14	Circadian Clocks in Mouse and Human CD4+ T Cells. <i>PLoS ONE</i> , 2011, 6, e29801.	2.5	156
15	Intracellular Survival of <i>Leishmania major</i> in Neutrophil Granulocytes after Uptake in the Absence of Heat-Labile Serum Factors. <i>Infection and Immunity</i> , 2002, 70, 826-835.	2.2	149
16	Early parasite containment is decisive for resistance to <i>Leishmania major</i> infection. <i>European Journal of Immunology</i> , 1995, 25, 2220-2227.	2.9	140
17	Chemokines, natural killer cells and granulocytes in the early course of <i>Leishmania major</i> infection in mice. <i>Medical Microbiology and Immunology</i> , 2001, 190, 73-76.	4.8	138
18	Association Between Azithromycin Therapy and Duration of Bacterial Shedding Among Patients With Shiga Toxin-Producing Enterohemorrhagic <i>Escherichia coli</i> O104:H4. <i>JAMA - Journal of the American Medical Association</i> , 2012, 307, 1046.	7.4	138

#	ARTICLE	IF	CITATIONS
19	<i>Chlamydia pneumoniae</i> Multiply in Neutrophil Granulocytes and Delay Their Spontaneous Apoptosis. <i>Journal of Immunology</i> , 2004, 172, 1768-1776.	0.8	131
20	Neutrophil granulocytes as host cells and transport vehicles for intracellular pathogens: Apoptosis as infection-promoting factor. <i>Immunobiology</i> , 2008, 213, 183-191.	1.9	131
21	Highly purified lipoteichoic acid activates neutrophil granulocytes and delays their spontaneous apoptosis via CD14 and TLR2. <i>Journal of Leukocyte Biology</i> , 2004, 75, 467-477.	3.3	130
22	Sleep-dependent activity of T cells and regulatory T cells. <i>Clinical and Experimental Immunology</i> , 2009, 155, 231-238.	2.6	128
23	<i>Leishmania</i> Promastigotes Release a Granulocyte Chemotactic Factor and Induce Interleukin-8 Release but Inhibit Gamma Interferon-Inducible Protein 10 Production by Neutrophil Granulocytes. <i>Infection and Immunity</i> , 2002, 70, 4177-4184.	2.2	126
24	Suppressive effect of cyclosporin A on the development of <i>Leishmania tropica</i> -induced lesions in genetically susceptible BALB/c mice. <i>Journal of Immunology</i> , 1986, 137, 702-7.	0.8	122
25	Rituximab induces remission in refractory HCV associated cryoglobulinaemic vasculitis. <i>Annals of the Rheumatic Diseases</i> , 2003, 62, 1230-1233.	0.9	119
26	Sleep, Immunity, and Circadian Clocks: A Mechanistic Model. <i>Gerontology</i> , 2010, 56, 574-580.	2.8	113
27	Natural killer cells participate in the early defense against <i>Leishmania major</i> infection in mice. <i>European Journal of Immunology</i> , 1993, 23, 2237-2241.	2.9	99
28	B-Cell Outgrowth and Ligand-Specific Production of IL-10 Correlate with Th2 Dominance in Certain Parasitic Diseases. <i>Experimental Parasitology</i> , 1996, 84, 168-177.	1.2	97
29	Phagocytes transmit <i>Chlamydia pneumoniae</i> from the lungs to the vasculature. <i>European Respiratory Journal</i> , 2004, 23, 506-510.	6.7	97
30	Phagocytosis of Apoptotic Cells by Neutrophil Granulocytes: Diminished Proinflammatory Neutrophil Functions in the Presence of Apoptotic Cells. <i>Journal of Immunology</i> , 2010, 184, 391-400.	0.8	95
31	<i>Chlamydia pneumoniae</i> directly interferes with HIF-1 α stabilization in human host cells. <i>Cellular Microbiology</i> , 2007, 9, 2181-2191.	2.1	89
32	Cytokine interactions in experimental cutaneous leishmaniasis. Interleukin 4 synergizes with interferon- γ to activate murine macrophages for killing of <i>Leishmania major</i> amastigotes. <i>European Journal of Immunology</i> , 1991, 21, 327-333.	2.9	88
33	Failure To Detect <i>Chlamydia pneumoniae</i> in Brain Sections of Alzheimer's Disease Patients. <i>Journal of Clinical Microbiology</i> , 2000, 38, 881-882.	3.9	81
34	T cell proliferation induced by <i>Borrelia burgdorferi</i> in patients with lyme borreliosis. Autologous serum required for optimum stimulation. <i>Arthritis and Rheumatism</i> , 1991, 34, 393-402.	6.7	80
35	Lymphocytes play the music but the macrophage calls the tune. <i>Trends in Immunology</i> , 1991, 12, 4-6.	7.5	75
36	Detection of cutaneous <i>Leishmania</i> infection in paraffin-embedded skin biopsies using the polymerase chain reaction. <i>Transactions of the Royal Society of Tropical Medicine and Hygiene</i> , 1995, 89, 273-275.	1.8	74

#	ARTICLE	IF	CITATIONS
37	The Xid defect determines an improved clinical course of murine leishmaniasis in susceptible mice. <i>International Immunology</i> , 1994, 6, 1117-1124.	4.0	71
38	Dimethylfumarate Impairs Neutrophil Functions. <i>Journal of Investigative Dermatology</i> , 2016, 136, 117-126.	0.7	70
39	Early Gene Expression of NK Cell-Activating Chemokines in Mice Resistant to <i>Leishmania major</i> . <i>Infection and Immunity</i> , 1999, 67, 3155-3159.	2.2	68
40	Tumor-promoting phorbol esters selectively abrogate the expression of the T4 differentiation antigen expressed on normal and malignant (SÅ@zary) T helper lymphocytes.. <i>Journal of Experimental Medicine</i> , 1982, 156, 1250-1255.	8.5	66
41	Presence of <i>Chlamydia pneumoniae</i> DNA in the cerebral spinal fluid is a common phenomenon in a variety of neurological diseases and not restricted to multiple sclerosis. <i>Annals of Neurology</i> , 2001, 49, 585-589.	5.3	65
42	First-Choice Antibiotics at Subinhibitory Concentrations Induce Persistence of <i>Chlamydia pneumoniae</i> . <i>Antimicrobial Agents and Chemotherapy</i> , 2004, 48, 1402-1405.	3.2	65
43	Poor correlation between microimmunofluorescence serology and polymerase chain reaction for detection of vascular <i>Chlamydia pneumoniae</i> infection in coronary artery disease patients. <i>Medical Microbiology and Immunology</i> , 1998, 187, 103-106.	4.8	61
44	Application of recombinant granulocyte-macrophage colony-stimulating factor has a detrimental effect in experimental murine leishmaniasis. <i>European Journal of Immunology</i> , 1988, 18, 1527-1534.	2.9	60
45	Cytokine interactions in experimental cutaneous leishmaniasis. II. Endogenous tumor necrosis factor- β production by macrophages is induced by the synergistic action of interferon (IFN)- β and interleukin (IL) 4 and accounts for the antiparasitic effect mediated by IFN- β and IL 4. <i>European Journal of Immunology</i> , 1991, 21, 1669-1675.	2.9	60
46	<i>Chlamydia pneumoniae</i> Hides inside Apoptotic Neutrophils to Silently Infect and Propagate in Macrophages. <i>PLoS ONE</i> , 2009, 4, e6020.	2.5	60
47	Flavonoids and 5-Aminosalicylic Acid Inhibit the Formation of Neutrophil Extracellular Traps. <i>Mediators of Inflammation</i> , 2013, 2013, 1-14.	3.0	60
48	Coiling Phagocytosis of Trypanosomatids and Fungal Cells. <i>Infection and Immunity</i> , 1998, 66, 4331-4339.	2.2	59
49	Detection of <i>Chlamydia pneumoniae</i> within Peripheral Blood Monocytes of Patients with Unstable Angina or Myocardial Infarction. <i>Journal of Infectious Diseases</i> , 2000, 181, S449-S451.	4.0	58
50	Polarized Expression of Tamm-Horsfall Protein by Renal Tubular Epithelial Cells Activates Human Granulocytes. <i>Infection and Immunity</i> , 2002, 70, 2650-2656.	2.2	57
51	Combined culture and metagenomic analyses reveal significant shifts in the composition of the cutaneous microbiome in psoriasis. <i>British Journal of Dermatology</i> , 2019, 181, 1254-1264.	1.5	57
52	T Cells Are Required for the Production of Blister-Inducing Autoantibodies in Experimental Epidermolysis Bullosa Acquisita. <i>Journal of Immunology</i> , 2010, 184, 1596-1603.	0.8	54
53	The role of the microbiome in psoriasis: moving from disease description to treatment selection?. <i>British Journal of Dermatology</i> , 2018, 178, 1020-1027.	1.5	54
54	Infection of neutrophil granulocytes with <i>Leishmania major</i> activates ERK 1/2 and modulates multiple apoptotic pathways to inhibit apoptosis. <i>Medical Microbiology and Immunology</i> , 2013, 202, 25-35.	4.8	49

#	ARTICLE	IF	CITATIONS
55	Methylprednisolone Blocks Autoantibody-Induced Tissue Damage in Experimental Models of Bullous Pemphigoid and Epidermolysis Bullosa Acquisita through Inhibition of Neutrophil Activation. <i>Journal of Investigative Dermatology</i> , 2013, 133, 2390-2399.	0.7	47
56	In Vitro Susceptibilities of <i>Chlamydia pneumoniae</i> Strains Recovered from Atherosclerotic Coronary Arteries. <i>Antimicrobial Agents and Chemotherapy</i> , 1998, 42, 2762-2764.	3.2	46
57	The influence of regulatory T cells and diurnal hormone rhythms on T helper cell activity. <i>Immunology</i> , 2010, 131, 488-500.	4.4	45
58	Fluorescence Lifetime Imaging Unravels <i>C. trachomatis</i> Metabolism and Its Crosstalk with the Host Cell. <i>PLoS Pathogens</i> , 2011, 7, e1002108.	4.7	43
59	Infection with <i>Anaplasma phagocytophilum</i> Activates the Phosphatidylinositol 3-Kinase/Akt and NF- κ B Survival Pathways in Neutrophil Granulocytes. <i>Infection and Immunity</i> , 2012, 80, 1615-1623.	2.2	41
60	Duration of Fecal Shedding of Shiga Toxinâ€‘Producing <i>Escherichia coli</i> O104:H4 in Patients Infected During the 2011 Outbreak in Germany: A Multicenter Study. <i>Clinical Infectious Diseases</i> , 2013, 56, 1132-1140.	5.8	41
61	Secondary necrotic neutrophils release interleukin-16C and macrophage migration inhibitory factor from stores in the cytosol. <i>Cell Death Discovery</i> , 2015, 1, 15056.	4.7	41
62	Systemic Infection of an Immunocompromised Patient with <i>Methylobacterium zatmanii</i> . <i>Journal of Clinical Microbiology</i> , 1999, 37, 248-250.	3.9	39
63	Effect of T-lymphocyte suppression on the parasite burden in <i>Leishmania major</i> -infected, genetically susceptible BALB/c mice. <i>Infection and Immunity</i> , 1986, 54, 909-912.	2.2	39
64	Coexistence of Antigen-Specific TH1 and TH2 Cells in Genetically Susceptible BALB/c Mice Infected with <i>Leishmania major</i> . <i>Immunobiology</i> , 1989, 179, 412-421.	1.9	38
65	Interactions of human T cell subsets during the induction of cytotoxic T lymphocytes: the role of interleukins. <i>Clinical and Experimental Immunology</i> , 1982, 49, 167-75.	2.6	37
66	CD14 promoter polymorphism $\hat{\sim}$ 159C>T is associated with susceptibility to chronic <i>Chlamydia pneumoniae</i> infection in peripheral blood monocytes. <i>Genes and Immunity</i> , 2004, 5, 435-438.	4.1	36
67	Systemic Infection with <i>Mycobacterium genavense</i> Following Immunosuppressive Therapy in a Patient Who Was Seronegative for Human Immunodeficiency Virus. <i>Clinical Infectious Diseases</i> , 1997, 24, 1245-1247.	5.8	33
68	Prolyl isomerases in a minimal cell. <i>FEBS Journal</i> , 2000, 267, 3270-3280.	0.2	33
69	Lessons Learned From Outbreaks of Shiga Toxin Producing <i>Escherichia coli</i> . <i>Current Infectious Disease Reports</i> , 2013, 15, 4-9.	3.0	33
70	Evasion strategies of <i>Leishmania</i> parasites. <i>Parasitology Today</i> , 1990, 6, 183-187.	3.0	32
71	Detection of <i>Treponema pallidum</i> in the vitreous by PCR. <i>British Journal of Ophthalmology</i> , 2007, 91, 592-595.	3.9	32
72	Apoptosis driven infection. <i>Autoimmunity</i> , 2007, 40, 349-352.	2.6	32

#	ARTICLE	IF	CITATIONS
73	Impact of a Low-Oxygen Environment on the Efficacy of Antimicrobials against Intracellular <i>Chlamydia trachomatis</i> . <i>Antimicrobial Agents and Chemotherapy</i> , 2011, 55, 2319-2324.	3.2	32
74	Mechanisms of apoptosis inhibition in <i>Chlamydia pneumoniae</i> -infected neutrophils. <i>International Journal of Medical Microbiology</i> , 2015, 305, 493-500.	3.6	31
75	<i>Leishmania major</i> parasites express cyclophilin isoforms with an unusual interaction with calcineurin. <i>Biochemical Journal</i> , 1998, 334, 659-667.	3.7	30
76	Alveolar epithelial cells type II are major target cells for <i>C. pneumoniae</i> in chronic but not in acute respiratory infection. <i>FEMS Immunology and Medical Microbiology</i> , 2004, 41, 197-203.	2.7	30
77	Immunization of susceptible hosts with a soluble antigen fraction from <i>Leishmania major</i> leads to aggravation of murine leishmaniasis mediated by CD4+ T cells. <i>European Journal of Immunology</i> , 1990, 20, 2533-2540.	2.9	28
78	Direct stimulatory effects of the TLR2/6 ligand bacterial lipopeptide MALP-2 on neutrophil granulocytes. <i>Medical Microbiology and Immunology</i> , 2007, 196, 61-71.	4.8	28
79	Detection of Potentially Diagnostic Leishmanial Antigens by Western Blot Analysis of Sera from Patients with Kala-Azar or Multilesional Cutaneous Leishmaniasis. <i>Journal of Infectious Diseases</i> , 1990, 162, 1417-1418.	4.0	27
80	Production of tumour necrosis factor during murine cutaneous leishmaniasis. <i>Parasite Immunology</i> , 1990, 12, 483-494.	1.5	27
81	HIF-1 α - and hypoxia-dependent immune responses in human CD4+CD25 ^{high} T cells and T helper 17 cells. <i>Journal of Leukocyte Biology</i> , 2014, 96, 305-312.	3.3	27
82	Long-Term Course of Humoral and Cellular Immune Responses in Outpatients After SARS-CoV-2 Infection. <i>Frontiers in Public Health</i> , 2021, 9, 732787.	2.7	27
83	“Life-like” assessment of antimicrobial surfaces by a new touch transfer assay displays strong superiority of a copper alloy compared to silver containing surfaces. <i>PLoS ONE</i> , 2017, 12, e0187442.	2.5	27
84	Co-transfer of B cells converts resistance into susceptibility in T cell-reconstituted, <i>Leishmania major</i> -resistant C.B-17 scid mice by a non-congrate mechanism. <i>International Immunology</i> , 1996, 8, 1569-1575.	4.0	26
85	Differential Production of Macrophage Inflammatory Protein 1 β (MIP-1 β), Lymphotactin, and MIP-2 by CD4+ Th Subsets Polarized In Vitro and In Vivo. <i>Infection and Immunity</i> , 2003, 71, 6178-6183.	2.2	26
86	Impairment of Gamma Interferon Signaling in Human Neutrophils Infected with <i>Anaplasma phagocytophilum</i> . <i>Infection and Immunity</i> , 2010, 78, 358-363.	2.2	26
87	The role of endoplasmic reticulum-related BiP/GRP78 in interferon gamma-induced persistent <i>Chlamydia pneumoniae</i> infection. <i>Cellular Microbiology</i> , 2015, 17, 923-934.	2.1	26
88	Kinetics of cell-mediated immunity developing during the course of <i>Leishmania major</i> infection in 'healer' and 'non-healer' mice: progressive impairment of response to and generation of interleukin-2. <i>Immunology</i> , 1987, 62, 485-92.	4.4	25
89	Beta-lactam antibiotic-induced release of lipoteichoic acid from <i>Staphylococcus aureus</i> leads to activation of neutrophil granulocytes. <i>Annals of Clinical Microbiology and Antimicrobials</i> , 2006, 5, 15.	3.8	23
90	Genetic diversity of the obligate intracellular bacterium <i>Chlamydia pneumoniae</i> by genome-wide analysis of single nucleotide polymorphisms: evidence for highly clonal population structure. <i>BMC Genomics</i> , 2007, 8, 355.	2.8	23

#	ARTICLE	IF	CITATIONS
91	Control of <i>Leishmania major</i> infection in BALB/c mice by inhibition of early lymphocyte entry into peripheral lymph nodes. <i>Journal of Immunology</i> , 1997, 158, 1246-53.	0.8	23
92	FREQUENCY ANALYSIS OF CYCLOSPORINE-SENSITIVE CYTOTOXIC T LYMPHOCYTE PRECURSORS. <i>Transplantation</i> , 1984, 38, 532-535.	1.0	22
93	Presence of <i>Chlamydia pneumoniae</i> DNA in the cerebral spinal fluid is a common phenomenon in a variety of neurological diseases and not restricted to multiple sclerosis. <i>Annals of Neurology</i> , 2001, 49, 585-9.	5.3	21
94	Transmission of <i>Chlamydia pneumoniae</i> infection from blood monocytes to vascular cells in a novel transendothelial migration model. <i>FEMS Microbiology Letters</i> , 2005, 242, 203-208.	1.8	20
95	Anti-infectious responses in <i>Leishmania major</i> -infected BALB/c mice injected with recombinant granulocyte-macrophage colony stimulating factor. <i>Annales De L'Institut Pasteur Immunologie</i> , 1987, 138, 759-762.	0.8	19
96	Host cell cyclophilin is important for the intracellular replication of <i>Leishmania major</i> . <i>Molecular Microbiology</i> , 1997, 24, 421-429.	2.5	19
97	Hypertension and mild chronic kidney disease persist following severe haemolytic uraemic syndrome caused by Shiga toxin-producing <i>Escherichia coli</i> O104:H4 in adults. <i>Nephrology Dialysis Transplantation</i> , 2016, 31, 95-103.	0.7	19
98	Effect of IL-7 treatment on <i>Leishmania major</i> -infected BALB.Xid mice: enhanced lymphopoiesis with sustained lack of B1 cells and clinical aggravation of disease. <i>International Immunology</i> , 1995, 7, 1879-84.	4.0	19
99	Improved technique for cannulation of the murine thoracic duct: a valuable tool for the dissection of immune responses. <i>Journal of Immunological Methods</i> , 1997, 202, 35-40.	1.4	18
100	Novel multi-probe RNase protection assay (RPA) sets for the detection of murine chemokine gene expression. <i>Journal of Immunological Methods</i> , 2001, 249, 155-165.	1.4	18
101	Growth Cycle-Dependent Pharmacodynamics of Antichlamydial Drugs. <i>Antimicrobial Agents and Chemotherapy</i> , 2005, 49, 1852-1856.	3.2	17
102	Serine-to-Asparagine Substitution in the GyrA Gene Leads to Quinolone Resistance in Moxifloxacin-Exposed <i>Chlamydia pneumoniae</i> . <i>Antimicrobial Agents and Chemotherapy</i> , 2005, 49, 406-407.	3.2	17
103	Variation in the mutation frequency determining quinolone resistance in <i>Chlamydia trachomatis</i> serovars L2 and D. <i>Journal of Antimicrobial Chemotherapy</i> , 2007, 61, 91-94.	3.0	17
104	Cyclosporin A enhances elimination of intracellular <i>L. major</i> parasites by murine macrophages. <i>Clinical and Experimental Immunology</i> , 1989, 75, 141-6.	2.6	17
105	Interferon- β Inhibits the Efficacy of Interleukin 1 to Generate a Th2-Cell Biased Immune Response Induced by <i>Leishmania major</i> . <i>Immunobiology</i> , 1991, 182, 292-306.	1.9	16
106	Activities of First-Choice Antimicrobials against Gamma Interferon-Treated <i>Chlamydia trachomatis</i> Differ in Hypoxia. <i>Antimicrobial Agents and Chemotherapy</i> , 2013, 57, 2828-2830.	3.2	16
107	Antibody Profiling of COVID-19 Patients in an Urban Low-Incidence Region in Northern Germany. <i>Frontiers in Public Health</i> , 2020, 8, 570543.	2.7	16
108	Proinflammatory Stimuli Enhance Phagocytosis of Apoptotic Cells by Neutrophil Granulocytes. <i>Scientific World Journal, The</i> , 2011, 11, 2230-2236.	2.1	15

#	ARTICLE	IF	CITATIONS
109	Immunoblotting as a valuable tool to differentiate human visceral leishmaniasis from lymphoproliferative disorders and other clinically similar diseases. <i>Research in Immunology</i> , 1992, 143, 375-383.	0.9	14
110	The AMOR study: a randomized, double-blinded trial of omeprazole versus ranitidine together with amoxicillin and metronidazole for eradication of <i>Helicobacter pylori</i> . <i>European Journal of Gastroenterology and Hepatology</i> , 2001, 13, 685-691.	1.6	14
111	In vitro susceptibility and eradication of <i>Chlamydia pneumoniae</i> cardiovascular strains from coronary artery endothelium and smooth muscle cells. <i>Cardiovascular Drugs and Therapy</i> , 2001, 15, 259-262.	2.6	14
112	Alterations in the phenotype of CMV-specific and total CD8+ T-cell populations in Wegener's granulomatosis. <i>Cellular Immunology</i> , 2003, 224, 1-7.	3.0	14
113	Sepsis with Bullous Necrotizing Skin Lesions due to <i>Vibrio vulnificus</i> Acquired Through Recreational Activities in the Baltic Sea. <i>European Journal of Clinical Microbiology and Infectious Diseases</i> , 2004, 23, 49-52.	2.9	14
114	Single-Nucleotide-Polymorphism-Specific PCR for Quantification and Discrimination of <i>Chlamydia pneumoniae</i> Genotypes by Use of a "Locked" Nucleic Acid. <i>Applied and Environmental Microbiology</i> , 2006, 72, 3785-3787.	3.1	14
115	IL-16 and MIF: messengers beyond neutrophil cell death. <i>Cell Death and Disease</i> , 2016, 7, e2049-e2049.	6.3	14
116	Type-1 interferons prolong the lifespan of neutrophils by interfering with members of the apoptotic cascade. <i>Cytokine</i> , 2018, 112, 21-26.	3.2	13
117	Atherogenetically Relevant Cells Support Continuous Growth of <i>Chlamydia Pneumoniae</i> . <i>Herz</i> , 2000, 25, 68-72.	1.1	12
118	Be Aware of the Possibility of False-Positive Results in Single-Locus PCR Assays for Methicillin-Resistant <i>Staphylococcus aureus</i> . <i>Journal of Clinical Microbiology</i> , 2006, 44, 2317-2317.	3.9	12
119	Host metabolism promotes growth of <i>Chlamydia pneumoniae</i> in a low oxygen environment. <i>International Journal of Medical Microbiology</i> , 2013, 303, 239-246.	3.6	11
120	Different patterns of the L-histidine decarboxylase (HDC) gene expression in mice resistant and susceptible to experimental cutaneous leishmaniasis. <i>Inflammation Research</i> , 2004, 53, 38-43.	4.0	10
121	On the partial suppression of IL-2 receptor expression and the prevention of lectin-induced lymphoblast formation by cyclosporine A. <i>Clinical and Experimental Immunology</i> , 1985, 60, 501-8.	2.6	10
