| #  | ARTICLE                                                                                                                                                                                                                     | IF  | CITATIONS |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Planning Implications Related to Sterilization-Sensitive Science Investigations Associated with Mars Sample Return (MSR). <i>Astrobiology</i> , 2022, 22, S-112-S-164.                                                      | 3.0 | 7         |
| 2  | Final Report of the Mars Sample Return Science Planning Group 2 (MSPG2). <i>Astrobiology</i> , 2022, 22, S-5-S-26.                                                                                                          | 3.0 | 15        |
| 3  | Rationale and Proposed Design for a Mars Sample Return (MSR) Science Program. <i>Astrobiology</i> , 2022, 22, S-27-S-56.                                                                                                    | 3.0 | 14        |
| 4  | The Scientific Importance of Returning Airfall Dust as a Part of Mars Sample Return (MSR). <i>Astrobiology</i> , 2022, 22, S-176-S-185.                                                                                     | 3.0 | 5         |
| 5  | Science and Curation Considerations for the Design of a Mars Sample Return (MSR) Sample Receiving Facility (SRF). <i>Astrobiology</i> , 2022, 22, S-217-S-237.                                                              | 3.0 | 7         |
| 6  | Preliminary Planning for Mars Sample Return (MSR) Curation Activities in a Sample Receiving Facility (SRF). <i>Astrobiology</i> , 2022, 22, S-57-S-80.                                                                      | 3.0 | 16        |
| 7  | COSPAR Sample Safety Assessment Framework (SSAF). <i>Astrobiology</i> , 2022, 22, S-186-S-216.                                                                                                                              | 3.0 | 7         |
| 8  | A roadmap for a European extraterrestrial sample curation facility – the EURO CARES project. , 2021, , 249-268.                                                                                                             |     | 8         |
| 9  | Carbonate assemblages in Cold Bokkeveld CM chondrite reveal complex parent body evolution. <i>Meteoritics and Planetary Science</i> , 2021, 56, 723-741.                                                                    | 1.6 | 2         |
| 10 | Time-Sensitive Aspects of Mars Sample Return (MSR) Science. <i>Astrobiology</i> , 2021, , .                                                                                                                                 | 3.0 | 10        |
| 11 | Mid-infrared reflectance spectroscopy of carbonaceous chondrites and Calcium–Aluminum-rich inclusions. <i>Planetary and Space Science</i> , 2020, 193, 105078.                                                              | 1.7 | 4         |
| 12 | Exploring Mars with Returned Samples. <i>Space Science Reviews</i> , 2020, 216, 1.                                                                                                                                          | 8.1 | 15        |
| 13 | Alteration minerals, fluids, and gases on early Mars: Predictions from 1D flow geochemical modeling of mineral assemblages in meteorite <sc>ALH</sc> 84001. <i>Meteoritics and Planetary Science</i> , 2016, 51, 2154-2174. | 1.6 | 28        |
| 14 | Fall, recovery, and characterization of the Novato L6 chondrite breccia. <i>Meteoritics and Planetary Science</i> , 2014, 49, 1388-1425.                                                                                    | 1.6 | 59        |
| 15 | Dust from collisions: A way to probe the composition of exo-planets?. <i>Icarus</i> , 2014, 239, 1-14.                                                                                                                      | 2.5 | 15        |
| 16 | Analysis of a prehistoric Egyptian iron bead with implications for the use and perception of meteorite iron in ancient Egypt. <i>Meteoritics and Planetary Science</i> , 2013, 48, 997-1006.                                | 1.6 | 34        |
| 17 | Sample return missions to minor bodies. <i>Astronomy and Geophysics</i> , 2013, 54, 3.28-3.32.                                                                                                                              | 0.2 | 3         |
| 18 | Stable isotope analysis of carbon and nitrogen in angrites. <i>Meteoritics and Planetary Science</i> , 2013, 48, 1590-1606.                                                                                                 | 1.6 | 12        |

| #  | ARTICLE                                                                                                                                                                                                          | IF   | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Radar-Enabled Recovery of the Sutterâ€™s Mill Meteorite, a Carbonaceous Chondrite Regolith Breccia. <i>Science</i> , 2012, 338, 1583-1587.                                                                       | 12.6 | 191       |
| 20 | Chondrules born in plasma? Simulation of gasâ€“grain interaction using plasma arcs with applications to chondrule and cosmic spherule formation. <i>Meteoritics and Planetary Science</i> , 2012, 47, 2269-2280. | 1.6  | 4         |
| 21 | Mid-infrared spectra of differentiated meteorites (achondrites): Comparison with astronomical observations of dust in protoplanetary and debris disks. <i>Icarus</i> , 2012, 219, 48-56.                         | 2.5  | 10        |
| 22 | Laihunitite in planetary materials: An FTIR and TEM study of oxidized synthetic and meteoritic Fe-rich olivine. <i>Journal of Mineralogical and Petrological Sciences</i> , 2012, 107, 157-166.                  | 0.9  | 4         |
| 23 | Reviewing UK space exploration. <i>Space Policy</i> , 2010, 26, 113-116.                                                                                                                                         | 1.5  | 1         |
| 24 | Sulfur isotopic composition of Feâ€“Ni sulfide grains in CI and CM carbonaceous chondrites. <i>Meteoritics and Planetary Science</i> , 2010, 45, 885-898.                                                        | 1.6  | 27        |
| 25 | ESSC-ESF Position Paperâ€™Science-Driven Scenario for Space Exploration: Report from the European Space Sciences Committee (ESSC). <i>Astrobiology</i> , 2009, 9, 23-41.                                         | 3.0  | 13        |
| 26 | Astronomy by microscope. <i>Astronomy and Geophysics</i> , 2009, 50, 4.21-4.26.                                                                                                                                  | 0.2  | 1         |
| 27 | Dating martian climate change. <i>Icarus</i> , 2009, 203, 376-389.                                                                                                                                               | 2.5  | 22        |
| 28 | Comet 81P/Wild 2 Under a Microscope. <i>Science</i> , 2006, 314, 1711-1716.                                                                                                                                      | 12.6 | 848       |
| 29 | Infrared Spectroscopy of Comet 81P/Wild 2 Samples Returned by Stardust. <i>Science</i> , 2006, 314, 1728-1731.                                                                                                   | 12.6 | 163       |
| 30 | The history of research on meteorites from Mars. <i>Geological Society Special Publication</i> , 2006, 256, 405-416.                                                                                             | 1.3  | 4         |
| 31 | Carbon isotopic gradients in the Martian crust: implications for past or present life on Mars. , 2006, , .                                                                                                       |      | 0         |
| 32 | FTâ€“IR microspectroscopy of extraterrestrial dust grains: Comparison of measurement techniques. <i>Planetary and Space Science</i> , 2006, 54, 599-611.                                                         | 1.7  | 15        |
| 33 | The carbon cycle on early Earthâ€™and on Mars?. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2006, 361, 1703-1713.                                                            | 4.0  | 27        |
| 34 | UV-Vis spectroscopy of stardust. <i>International Journal of Astrobiology</i> , 2006, 5, 287-293.                                                                                                                | 1.6  | 1         |
| 35 | WatSen: searching for clues for water (and life) on Mars. <i>International Journal of Astrobiology</i> , 2006, 5, 211-219.                                                                                       | 1.6  | 3         |
| 36 | A history of the meteorite collection at the Natural History Museum, London. <i>Geological Society Special Publication</i> , 2006, 256, 153-162.                                                                 | 1.3  | 4         |

| #  | ARTICLE                                                                                                                                                                         | IF   | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 37 | Commission 22: Meteors, Meteorites & Interplanetary Dust. Proceedings of the International Astronomical Union, 2005, 1, 167-170.                                                | 0.0  | 1         |
| 38 | The Meteoritical Bulletin, No. 89, 2005 September. Meteoritics and Planetary Science, 2005, 40, A201-A263.                                                                      | 1.6  | 73        |
| 39 | Biologically induced elemental variations in Antarctic sandstones: a potential test for Martian micro-organisms. International Journal of Astrobiology, 2004, 3, 97-106.        | 1.6  | 19        |
| 40 | Elemental and Isotopic Abundances of Carbon and Nitrogen in Meteorites. Space Science Reviews, 2003, 106, 231-248.                                                              | 8.1  | 73        |
| 41 | The physical constraints on extraterrestrial life. , 2003, , 397-414.                                                                                                           |      | 0         |
| 42 | Elemental and Isotopic Abundances of Carbon and Nitrogen in Meteorites. Space Sciences Series of ISSI, 2003, , 231-248.                                                         | 0.0  | 7         |
| 43 | The nature and significance of meteoritic matter. COSPAR Colloquia Series, 2002, 15, 379-391.                                                                                   | 0.2  | 0         |
| 44 | The Fall, Recovery, Orbit, and Composition of the Tagish Lake Meteorite: A New Type of Carbonaceous Chondrite. Science, 2000, 290, 320-325.                                     | 12.6 | 282       |
| 45 | A nitrogen and argon stable isotope study of Allan Hills 84001: Implications for the evolution of the Martian atmosphere. Meteoritics and Planetary Science, 1998, 33, 795-802. | 1.6  | 27        |
| 46 | Meteorites: their flux with time and impact effects. Geological Society Special Publication, 1998, 140, 1-5.                                                                    | 1.3  | 16        |
| 47 | A carbon and nitrogen isotope study of Zagami. Journal of Geophysical Research, 1997, 102, 9165-9173.                                                                           | 3.3  | 21        |
| 48 | CM chondrites exhibit the complete petrologic range from type 2 to 1. Geochimica Et Cosmochimica Acta, 1997, 61, 5099-5115.                                                     | 3.9  | 227       |
| 49 | The K (Kakangari) chondrite grouplet. Geochimica Et Cosmochimica Acta, 1996, 60, 4253-4263.                                                                                     | 3.9  | 88        |
| 50 | Opening a martian can of worms?. Nature, 1996, 382, 575-576.                                                                                                                    | 27.8 | 12        |
| 51 | A search for nitrates in Martian meteorites. Journal of Geophysical Research, 1995, 100, 5449.                                                                                  | 3.3  | 24        |
| 52 | Martians come out of the closet. Nature, 1994, 369, 356-356.                                                                                                                    | 27.8 | 2         |
