citing authors

#	ARTICLE	IF	CITATIONS
1	Interaction frequency as a surrogate for the total effect of animal mutualists on plants. <i>Ecology Letters</i> , 2005, 8, 1088-1094.	6.4	467
2	LONGEVITY CAN BUFFER PLANT AND ANIMAL POPULATIONS AGAINST CHANGING CLIMATIC VARIABILITY. <i>Ecology</i> , 2008, 89, 19-25.	3.2	386
3	Demographic compensation and tipping points in climate-induced range shifts. <i>Nature</i> , 2010, 467, 959-962.	27.8	381
4	Predicting changes in the distribution and abundance of species under environmental change. <i>Ecology Letters</i> , 2015, 18, 303-314.	6.4	348
5	DIRECT AND INTERACTIVE EFFECTS OF ENEMIES AND MUTUALISTS ON PLANT PERFORMANCE: A META-ANALYSIS. <i>Ecology</i> , 2007, 88, 1021-1029.	3.2	208
6	How do plant ecologists use matrix population models?. <i>Ecology Letters</i> , 2011, 14, 1-8.	6.4	205
7	Aging in the Natural World: Comparative Data Reveal Similar Mortality Patterns Across Primates. <i>Science</i> , 2011, 331, 1325-1328.	12.6	204
8	Ecological and evolutionary impacts of changing climatic variability. <i>Biological Reviews</i> , 2017, 92, 22-42.	10.4	201
9	Incorporating local adaptation into forecasts of species'™ distribution and abundance under climate change. <i>Global Change Biology</i> , 2019, 25, 775-793.	9.5	169
10	Buffering of Life Histories against Environmental Stochasticity: Accounting for a Spurious Correlation between the Variabilities of Vital Rates and Their Contributions to Fitness. <i>American Naturalist</i> , 2004, 163, 579-590.	2.1	166
11	Correctly Estimating How Environmental Stochasticity Influences Fitness and Population Growth. <i>American Naturalist</i> , 2005, 166, E14-E21.	2.1	140
12	Ecological Dynamics of Mutualist/Antagonist Communities. <i>American Naturalist</i> , 2003, 162, S24-S39.	2.1	126
13	Life history of the long-lived gynodioecious cushion plant <i>Silene acaulis</i> (Caryophyllaceae), inferred from size-based population projection matrices. <i>American Journal of Botany</i> , 1998, 85, 784-793.	1.7	124
14	POPULATION VIABILITY ANALYSIS IN ENDANGERED SPECIES RECOVERY PLANS: PAST USE AND FUTURE IMPROVEMENTS. , 2002, 12, 708-712.		110
15	The Primate Life History Database: a unique shared ecological data resource. <i>Methods in Ecology and Evolution</i> , 2010, 1, 199-211.	5.2	109
16	Do geographic, climatic or historical ranges differentiate the performance of central versus peripheral populations?. <i>Global Ecology and Biogeography</i> , 2015, 24, 611-620.	5.8	107
17	Ability of Matrix Models to Explain the Past and Predict the Future of Plant Populations. <i>Conservation Biology</i> , 2013, 27, 968-978.	4.7	104
18	Demographic compensation among populations: what is it, how does it arise and what are its implications?. <i>Ecology Letters</i> , 2015, 18, 1139-1152.	6.4	96

#	ARTICLE	IF	CITATIONS
19	Mutualism Denied? Nectar-Robbing Bumble Bees do not Reduce Female or Male Success of Bluebells. <i>Ecology</i> , 1996, 77, 1451-1462.	3.2	95
20	Low Demographic Variability in Wild Primate Populations: Fitness Impacts of Variation, Covariation, and Serial Correlation in Vital Rates. <i>American Naturalist</i> , 2011, 177, E14-E28.	2.1	91
21	Benefit and cost curves for typical pollination mutualisms. <i>Ecology</i> , 2010, 91, 1276-1285.	3.2	89
22	Advancing environmentally explicit structured population models of plants. <i>Journal of Ecology</i> , 2016, 104, 292-305.	4.0	82
23	Empirical estimation of dispersal resistance surfaces: a case study with red-cockaded woodpeckers. <i>Landscape Ecology</i> , 2013, 28, 755-767.	4.2	76
24	UNDERSTANDING AND PREDICTING THE EFFECTS OF SPARSE DATA ON DEMOGRAPHIC ANALYSES. <i>Ecology</i> , 2005, 86, 1154-1163.	3.2	73
25	Three-Way Coexistence in Obligate Mutualist-Exploiter Interactions: The Potential Role of Competition. <i>American Naturalist</i> , 2003, 161, 860-875.	2.1	67
26	Female and male life tables for seven wild primate species. <i>Scientific Data</i> , 2016, 3, 160006.	5.3	66
27	DETECTING POPULATION-LEVEL CONSEQUENCES OF ONGOING ENVIRONMENTAL CHANGE WITHOUT LONG-TERM MONITORING. <i>Ecology</i> , 1999, 80, 1537-1551.	3.2	61
28	Does climate variability influence the demography of wild primates? Evidence from long-term life-history data in seven species. <i>Global Change Biology</i> , 2017, 23, 4907-4921.	9.5	61
29	Both life-history plasticity and local adaptation will shape range-wide responses to climate warming in the tundra plant <i>Silene acaulis</i> . <i>Global Change Biology</i> , 2018, 24, 1614-1625.	9.5	57
30	Modeling Controlled Burning and Trampling Reduction for Conservation of <i>Hudsonia montana</i> . <i>Conservation Biology</i> , 1998, 12, 1291-1301.	4.7	52
31	Biotic and anthropogenic forces rival climatic/abiotic factors in determining global plant population growth and fitness. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2020, 117, 1107-1112.	7.1	51
32	Recommendations for Improving Recovery Criteria under the US Endangered Species Act. <i>BioScience</i> , 2015, 65, 189-199.	4.9	47
33	HOW GENERAL ARE THE DETERMINANTS OF THE STOCHASTIC POPULATION GROWTH RATE ACROSS NEARBY SITES?. <i>Ecological Monographs</i> , 2005, 75, 119-137.	5.4	38
34	Variation in stochastic demography between and within central and peripheral regions in a widespread short-lived herb. <i>Ecology</i> , 2013, 94, 1378-1388.	3.2	36
35	Simultaneous effects of food limitation and inducible resistance on herbivore population dynamics. <i>Theoretical Population Biology</i> , 2008, 73, 63-78.	1.1	29
36	Aridity weakens population-level effects of multiple species interactions on <i>Hibiscus meyeri</i> . <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2018, 115, 543-548.	7.1	28

#	ARTICLE	IF	CITATIONS
37	ENVIRONMENTAL FORCING AND THE COMPETITIVE DYNAMICS OF A GUILD OF CACTUS-TENDING ANT MUTUALISTS. <i>Ecology</i> , 2005, 86, 3190-3199.	3.2	24
38	Higher survival at low density counteracts lower fecundity to obviate Allee effects in a perennial plant. <i>Journal of Ecology</i> , 2011, 99, 1162-1170.	4.0	22
39	A critical comparison of integral projection and matrix projection models for demographic analysis. <i>Ecological Monographs</i> , 2021, 91, e01447.	5.4	21
40	Modeling vital rates improves estimation of population projection matrices. <i>Population Ecology</i> , 2006, 48, 79-89.	1.2	19
41	Climate manipulations differentially affect plant population dynamics within versus beyond northern range limits. <i>Journal of Ecology</i> , 2021, 109, 664-675.	4.0	18
42	The demographic consequences of mutualism: ants increase host-plant fruit production but not population growth. <i>Oecologia</i> , 2015, 179, 435-446.	2.0	15
43	Mechanism matters: the cause of fluctuations in boom-bust populations governs optimal habitat restoration strategy. <i>Ecological Applications</i> , 2018, 28, 356-372.	3.8	13
44	Matrix population models from 20 studies of perennial plant populations. <i>Ecology</i> , 2012, 93, 951-951.	3.2	12
45	Climate warming threatens the persistence of a community of disturbance-adapted native annual plants. <i>Ecology</i> , 2021, 102, e03464.	3.2	12
46	Modeling Controlled Burning and Trampling Reduction for Conservation of <i>Hudsonia montana</i> . <i>Conservation Biology</i> , 1998, 12, 1291-1301.	4.7	11
47	Climate change impacts on population growth across a species' range differ due to nonlinear responses of populations to climate and variation in rates of climate change. <i>PLoS ONE</i> , 2021, 16, e0247290.	2.5	11
48	Allee dynamics generated by protection mutualisms can drive oscillations in trophic cascades. <i>Theoretical Ecology</i> , 2008, 1, 77-88.	1.0	10
49	Latitudinal gradients in population growth do not reflect demographic responses to climate. <i>Ecological Applications</i> , 2021, 31, e2242.	3.8	10
50	Habitat restoration alters adult butterfly morphology and potential fecundity through effects on host plant quality. <i>Ecosphere</i> , 2016, 7, e01522.	2.2	8
51	Asynchrony in individual and subpopulation fecundity stabilizes reproductive output of an alpine plant population. <i>Ecology</i> , 2019, 100, e02639.	3.2	7
52	Geographic location, local environment, and individual size mediate the effects of climate warming and neighbors on a benefactor plant. <i>Oecologia</i> , 2019, 189, 243-253.	2.0	6
53	Improving structured population models with more realistic representations of non-normal growth. <i>Methods in Ecology and Evolution</i> , 2019, 10, 1431-1444.	5.2	4
54	How effective are buffer zones in managing invasive beavers in Patagonia? A simulation study. <i>Biodiversity and Conservation</i> , 2017, 26, 2591-2605.	2.6	3

#	ARTICLE	IF	CITATIONS
55	Shifting correlations among multiple aspects of weather complicate predicting future demography of a threatened species. <i>Ecosphere</i> , 2021, 12, e03740.	2.2	2
56	Climate change weakens the impact of disturbance interval on the growth rate of natural populations of Venus flytrap. <i>Ecological Monographs</i> , 0, , .	5.4	2
57	Detecting Population-Level Consequences of Ongoing Environmental Change without Long-Term Monitoring. <i>Ecology</i> , 1999, 80, 1537.	3.2	1
58	Testing Demographic Methods Using Field Studies of Five Dissimilar Species. <i>Bulletin of the Ecological Society of America</i> , 2021, 102, e01870.	0.2	0
