|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | 2022 World Hypertension League, Resolve To Save Lives and International Society of Hypertension dietary sodium (salt) global call to action. <i>Journal of Human Hypertension</i> , 2023, 37, 428-437.                                                       | 1.0 | 22        |
| 2  | Aldosterone-producing adenoma associated with non-suppressed renin: a case series. <i>Journal of Human Hypertension</i> , 2022, 36, 373-380.                                                                                                                 | 1.0 | 4         |
| 3  | Detecting primary aldosteronism in Australian primary care: a prospective study. <i>Medical Journal of Australia</i> , 2022, 216, 408-412.                                                                                                                   | 0.8 | 29        |
| 4  | The Cl <sup>-</sup> /HCO <sub>3</sub> <sup>-</sup> exchanger pendrin is downregulated during oral co-administration of exogenous mineralocorticoid and KCl in patients with primary aldosteronism. <i>Journal of Human Hypertension</i> , 2021, 35, 837-848. | 1.0 | 14        |
| 5  | Aldosterone, gut microbiome and hypertension: selected papers from APCH 2019. <i>Journal of Human Hypertension</i> , 2021, 35, 109-109.                                                                                                                      | 1.0 | 0         |
| 6  | The mineralocorticoid receptor—an emerging player in metabolic syndrome?. <i>Journal of Human Hypertension</i> , 2021, 35, 117-123.                                                                                                                          | 1.0 | 20        |
| 7  | ClearSight <sup>®</sup> , a finger cuff versus invasive arterial pressure measurement in patients with body mass index above 45 kg/m <sup>2</sup> . <i>BMC Anesthesiology</i> , 2021, 21, 152.                                                               | 0.7 | 6         |
| 8  | Relationship Between the Aldosterone-to-Renin Ratio and Blood Pressure in Young Adults: A Longitudinal Study. <i>Hypertension</i> , 2021, 78, 387-396.                                                                                                       | 1.3 | 6         |
| 9  | Aldosterone and Primary Aldosteronism: Star Performers in Hypertension Research. <i>Hypertension</i> , 2021, 78, 747-750.                                                                                                                                    | 1.3 | 0         |
| 10 | Diagnosis and treatment of primary aldosteronism. <i>Lancet Diabetes and Endocrinology</i> , 2021, 9, 876-892.                                                                                                                                               | 5.5 | 106       |
| 11 | Diagnosis of Primary Aldosteronism by Seated Saline Suppression Test—Variability Between Immunoassay and HPLC-MS/MS. <i>Journal of Clinical Endocrinology and Metabolism</i> , 2020, 105, e477-e483.                                                         | 1.8 | 35        |
| 12 | The Role of Exercise in Patients with Obesity and Hypertension. <i>Current Hypertension Reports</i> , 2020, 22, 77.                                                                                                                                          | 1.5 | 15        |
| 13 | Managing hypertension during the COVID-19 pandemic. <i>Journal of Human Hypertension</i> , 2020, 34, 415-417.                                                                                                                                                | 1.0 | 19        |
| 14 | Can unilateral forms of primary aldosteronism be excluded with confidence preoperatively by methods other than adrenal venous sampling? The search continues. <i>Journal of Hypertension</i> , 2020, 38, 1259-1261.                                          | 0.3 | 1         |
| 15 | Effects of Ramipril on the Aldosterone/Renin Ratio and the Aldosterone/Angiotensin II Ratio in Patients With Primary Aldosteronism. <i>Hypertension</i> , 2020, 76, 488-496.                                                                                 | 1.3 | 23        |
| 16 | Biochemical, Histopathological, and Genetic Characterization of Posture-Responsive and Unresponsive APAs. <i>Journal of Clinical Endocrinology and Metabolism</i> , 2020, 105, e3224-e3235.                                                                  | 1.8 | 21        |
| 17 | Measurement of Equilibrium Angiotensin II in the Diagnosis of Primary Aldosteronism. <i>Clinical Chemistry</i> , 2020, 66, 483-492.                                                                                                                          | 1.5 | 44        |
| 18 | Controversies and advances in adrenal venous sampling in the diagnostic workup of primary aldosteronism. <i>Best Practice and Research in Clinical Endocrinology and Metabolism</i> , 2020, 34, 101400.                                                      | 2.2 | 24        |

| #  | ARTICLE                                                                                                                                                                                                                                 | IF  | CITATIONS |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Exercise and sport science australia position stand update on exercise and hypertension. Journal of Human Hypertension, 2019, 33, 837-843.                                                                                              | 1.0 | 47        |
| 20 | Strengthening a societal tie and other new initiatives for 2019. Journal of Human Hypertension, 2019, 33, 173-173.                                                                                                                      | 1.0 | 0         |
| 21 | Pathogenesis of Familial Hyperaldosteronism Type II: New Concepts Involving Anion Channels. Current Hypertension Reports, 2019, 21, 31.                                                                                                 | 1.5 | 19        |
| 22 | The interplay of renal potassium and sodium handling in blood pressure regulation: critical role of the WNK-SPAK-NCC pathway. Journal of Human Hypertension, 2019, 33, 508-523.                                                         | 1.0 | 21        |
| 23 | Response to Letter to the Editor: "Comparison of Seated With Recumbent Saline Suppression Testing for the Diagnosis of Primary Aldosteronism". Journal of Clinical Endocrinology and Metabolism, 2019, 104, 2344-2345.                  | 1.8 | 0         |
| 24 | Mineralocorticoid antagonism enhances brown adipose tissue function in humans: A randomized placebo-controlled crossover study. Diabetes, Obesity and Metabolism, 2019, 21, 509-516.                                                    | 2.2 | 40        |
| 25 | Primary Aldosteronism; Epidemiology and Screening. , 2019, , 598-606.                                                                                                                                                                   |     | 1         |
| 26 | CLCN2 chloride channel mutations in familial hyperaldosteronism type II. Nature Genetics, 2018, 50, 349-354.                                                                                                                            | 9.4 | 188       |
| 27 | Cellular and Genetic Causes of Idiopathic Hyperaldosteronism. Hypertension, 2018, 72, 874-880.                                                                                                                                          | 1.3 | 137       |
| 28 | Aldosterone LC-MS/MS Assay-Specific Threshold Values in Screening and Confirmatory Testing for Primary Aldosteronism. Journal of Clinical Endocrinology and Metabolism, 2018, 103, 3965-3973.                                           | 1.8 | 40        |
| 29 | Comparison of Seated With Recumbent Saline Suppression Testing for the Diagnosis of Primary Aldosteronism. Journal of Clinical Endocrinology and Metabolism, 2018, 103, 4113-4124.                                                      | 1.8 | 68        |
| 30 | A young man with severe hypertension. BMJ: British Medical Journal, 2018, 362, k2935.                                                                                                                                                   | 2.4 | 1         |
| 31 | In Primary Aldosteronism, Mineralocorticoids Influence Exosomal Sodium-Chloride Cotransporter Abundance. Journal of the American Society of Nephrology: JASN, 2017, 28, 56-63.                                                          | 3.0 | 55        |
| 32 | New Advances in the Diagnostic Workup of Primary Aldosteronism. Journal of the Endocrine Society, 2017, 1, 149-161.                                                                                                                     | 0.1 | 10        |
| 33 | Screening for Endocrine Hypertension: An Endocrine Society Scientific Statement. Endocrine Reviews, 2017, 38, 103-122.                                                                                                                  | 8.9 | 76        |
| 34 | Effect of Moxonidine on the Aldosterone/Renin Ratio in Healthy Male Volunteers. Journal of Clinical Endocrinology and Metabolism, 2017, 102, 2039-2043.                                                                                 | 1.8 | 18        |
| 35 | Outcomes after adrenalectomy for unilateral primary aldosteronism: an international consensus on outcome measures and analysis of remission rates in an international cohort. Lancet Diabetes and Endocrinology, the, 2017, 5, 689-699. | 5.5 | 595       |
| 36 | Effect of Combined Hormonal Replacement Therapy on the Aldosterone/Renin Ratio in Postmenopausal Women. Journal of Clinical Endocrinology and Metabolism, 2017, 102, 2329-2334.                                                         | 1.8 | 24        |

| #  | ARTICLE                                                                                                                                                                                                                                | IF   | CITATIONS |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 37 | Targeted LOWering of Central Blood Pressure in patients with hypertension: Baseline recruitment, rationale and design of a randomized controlled trial (The LOW CBP study). Contemporary Clinical Trials, 2017, 62, 37-42.             | 0.8  | 8         |
| 38 | Can Screening and Confirmatory Testing in the Management of Patients with Primary Aldosteronism be Improved?. Hormone and Metabolic Research, 2017, 49, 915-921.                                                                       | 0.7  | 23        |
| 39 | Potassium Channel Mutations and Human Disease. , 2017, , 503-516.                                                                                                                                                                      |      | 0         |
| 40 | Guiding Hypertension Management Using Central Blood Pressure: Effect of Medication Withdrawal on Left Ventricular Function. American Journal of Hypertension, 2016, 29, 319-325.                                                       | 1.0  | 8         |
| 41 | OS 35-04 THE AA2-RATIO. Journal of Hypertension, 2016, 34, e400.                                                                                                                                                                       | 0.3  | 1         |
| 42 | Resistant Hypertension and Chronic Kidney Disease: a Dangerous Liaison. Current Hypertension Reports, 2016, 18, 36.                                                                                                                    | 1.5  | 17        |
| 43 | Blood Pressure Variability and Prediction of Target Organ Damage in Patients With Uncomplicated Hypertension. American Journal of Hypertension, 2016, 29, 1046-1054.                                                                   | 1.0  | 25        |
| 44 | Is It the Beginning of the End for the Recumbent Saline Infusion Test?. Hypertension, 2016, 68, 857-858.                                                                                                                               | 1.3  | 1         |
| 45 | Primary Aldosteronism: Changing Definitions and New Concepts of Physiology and Pathophysiology Both Inside and Outside the Kidney. Physiological Reviews, 2016, 96, 1327-1384.                                                         | 13.1 | 119       |
