Version: 2024-02-01

83 papers	9,950 citations	94433 37 h-index	69250 77 g-index
88 all docs	88 docs citations	88 times ranked	14639 citing authors

#	Article	IF	Citations
1	Effects of seed morphology and orientation on secondary seed dispersal by wind. Journal of Plant Ecology, 2022, 15, 1257-1272.	2.3	4
2	Simulating the spread and establishment of alien species along aquatic and terrestrial transport networks: A multiâ€pathway and highâ€resolution approach. Journal of Applied Ecology, 2022, 59, 1769-1780.	4.0	5
3	Global relationships in tree functional traits. Nature Communications, 2022, 13, .	12.8	29
4	Interâ€and intraspecific selection in alien plants: How population growth, functional traits and climate responses change with residence time. Global Ecology and Biogeography, 2021, 30, 429-442.	5.8	6
5	Rangeâ€wide population viability analyses reveal high sensitivity to wildflower harvesting in extreme environments. Journal of Applied Ecology, 2021, 58, 1399-1410.	4.0	2
6	Predicting the dynamics of establishing tree populations: A framework for statistical inference and lessons for data collection. Methods in Ecology and Evolution, 2021, 12, 1721-1733.	5.2	2
7	Mineral-Ecological Cropping Systemsâ€”A New Approach to Improve Ecosystem Services by Farming without Chemical Synthetic Plant Protection. Agronomy, 2021, 11, 1710.	3.0	25
8	Seed dispersal by wind decreases when plants are waterâ€stressed, potentially counteracting species coexistence and niche evolution. Ecology and Evolution, 2021, 11, 16239-16249.	1.9	2
9	TRY plant trait database â€“ enhanced coverage and open access. Global Change Biology, 2020, 26, 119-188.	9.5	1,038
10	Functional traits explain the Hutchinsonian niches of plant species. Global Ecology and Biogeography, 2020, 29, 534-545.	5.8	32
11	The importance of individual movement and feeding behaviour for long-distance seed dispersal by red deer: a data-driven model. Movement Ecology, 2020, 8, 44.	2.8	11
12	Tree potential growth varies more than competition among spontaneously established forest stands of pedunculate oak (Quercus robur). Annals of Forest Science, 2020, 77, 1.	2.0	7
13	Shifts in plant functional community composition under hydrological stress strongly decelerate litter decomposition. Ecology and Evolution, 2020, 10, 5712-5724.	1.9	7
14	Mismatches between demographic niches and geographic distributions are strongest in poorly dispersed and highly persistent plant species. Proceedings of the National Academy of Sciences of the United States of America, 2020, 117, 3663-3669.	7.1	42
15	Biotic resistance or introduction bias? Immigrant plant performance decreases with residence times over millennia. Global Ecology and Biogeography, 2019, 28, 222-237.	5.8	17
16	A trade-off between primary and secondary seed dispersal by wind. Plant Ecology, 2019, 220, 541-552.	1.6	14
17	The dimensionality of stability depends on disturbance type. Ecology Letters, 2019, 22, 674-684.	6.4	65
18	The geometry of habitat fragmentation: Effects of species distribution patterns on extinction risk due to habitat conversion. Ecology and Evolution, 2019, 9, 2775-2790.	1.9	37

#	Article	IF	Citations
19	Neighbourhood effects on plant reproduction: An experimentalâ€“analytical framework and its application to the invasive Senecio inaequidens. Journal of Ecology, 2018, 106, 761-773.	4.0	22
20	Life-History Traits Evolved Jointly with Climatic Niche and Disturbance Regime in the Genus Leucadendron (Proteaceae). American Naturalist, 2018, 191, 220-234.	2.1	11
21	Sugar landscapes and pollinatorâ€mediated interactions in plant communities. Ecography, 2017, 40, 1129-1138.	4.5	41
22	Coexistence of plant species in a biodiversity hotspot is stabilized by competition but not by seed predation. Oikos, 2017, 126, .	2.7	19
23	Responses of nectarâ€feeding birds to floral resources at multiple spatial scales. Ecography, 2016, 39, 619-629.	4.5	39
24	Environmental drivers of demographic variation across the global geographical range of 26 plant species. Journal of Ecology, 2016, 104, 331-342.	4.0	38
25	A bird pollinator shows positive frequency dependence and constancy of species choice in natural plant communities. Ecology, 2016, 97, 3110-3118.	3.2	13
26	REVIEW: Predictive ecology in a changing world. Journal of Applied Ecology, 2015, 52, 1293-1310.	4.0	237
27	Reward quality predicts effects of bird-pollinators on the reproduction of African Protea shrubs. Perspectives in Plant Ecology, Evolution and Systematics, 2015, 17, 209-217.	2.7	26
28	Statistical ecology comes of age. Biology Letters, 2014, 10, 20140698.	2.3	40
29	Demography as the basis for understanding and predicting range dynamics. Ecography, 2014, 37, 1149-1154.	4.5	49
30	CONVERGENT AND CORRELATED EVOLUTION OF MAJOR LIFE-HISTORY TRAITS IN THE ANGIOSPERM GENUSLEUCADENDRON(PROTEACEAE). Evolution; International Journal of Organic Evolution, 2014, 68, 2775-2792.	2.3	25
31	The influence of interspecific interactions on species range expansion rates. Ecography, 2014, 37, 1198-1209.	4.5	196
32	Quantifying rangeâ€wide variation in population trends from local abundance surveys and widespread opportunistic occurrence records. Methods in Ecology and Evolution, 2014, 5, 751-760.	5.2	56
33	Does probability of occurrence relate to population dynamics?. Ecography, 2014, 37, 1155-1166.	4.5	127
34	Landscape structure and genetic architecture jointly impact rates of niche evolution. Ecography, 2014, 37, 1218-1229.	4.5	28
35	Effects of intraspecific and community density on the lifetime fecundity of long-lived shrubs. Perspectives in Plant Ecology, Evolution and Systematics, 2013, 15, 150-161.	2.7	15
36	Habitat loss and fragmentation affecting mammal and bird communitiesâ€”The role of interspecific competition and individual space use. Ecological Informatics, 2013, 14, 90-98.	5.2	60

#	Article	IF	Citations
37	Impacts of past habitat loss and future climate change on the range dynamics of South African Proteaceae. Diversity and Distributions, 2013, 19, 363-376.	4.1	33
38	How can we bring together empiricists and modellers in functional biodiversity research?. Basic and Applied Ecology, 2013, 14, 93-101.	2.7	24
39	Fynbos Proteaceae as model organisms for biodiversity research and conservation. South African Journal of Science, 2012, 108, .	0.7	21
40	How to understand speciesâ€™ niches and range dynamics: a demographic research agenda for biogeography. Journal of Biogeography, 2012, 39, 2146-2162.	3.0	249
41	Forecasting species ranges by statistical estimation of ecological niches and spatial population dynamics. Global Ecology and Biogeography, 2012, 21, 293-304.	5.8	188
42	Towards novel approaches to modelling biotic interactions in multispecies assemblages at large spatial extents. Journal of Biogeography, 2012, 39, 2163-2178.	3.0	340
43	Movement upscaled â€“ the importance of individual foraging movement for community response to habitat loss. Ecography, 2012, 35, 436-445.	4.5	31
44	How random is dispersal? From stochasticity to process in the description of seed movement. , 2012, , 240-248.		2
45	When and how should intraspecific variability be considered in trait-based plant ecology?. Perspectives in Plant Ecology, Evolution and Systematics, 2011, 13, 217-225.	2.7	454
46	Spread of North American wind-dispersed trees in future environments. Ecology Letters, 2011, 14, 211-219.	6.4	160
47	Effects of Harvesting Flowers from Shrubs on the Persistence and Abundance of Wild Shrub Populations at Multiple Spatial Extents. Conservation Biology, 2011, 25, 73-84.	4.7	17
48	Differentiation of reproductive and competitive ability in the invaded range of Senecio inaequidens: the role of genetic Allee effects, adaptive and nonadaptive evolution. New Phytologist, 2011, 192, 529-541.	7.3	50
49	An allometric model of home range formation explains the structuring of animal communities exploiting heterogeneous resources. Oikos, 2011, 120, 106-118.	2.7	45
50	Disentangling facilitation and seed dispersal from environmental heterogeneity as mechanisms generating associations between savanna plants. Journal of Vegetation Science, 2011, 22, 1038-1048.	2.2	27
51	Projecting climate change impacts on species distributions in megadiverse South African Cape and Southwest Australian Floristic Regions: Opportunities and challenges. Austral Ecology, 2010, 35, 374-391.	1.5	86
52	The making of a rapid plant invader: genetic diversity and differentiation in the native and invaded range of Senecio inaequidens. Molecular Ecology, 2010, 19, 3952-3967.	3.9	100
53	Estimating demographic models for the range dynamics of plant species. Global Ecology and Biogeography, 2010, 19, 85-97.	5.8	73
54	Increased mortality can promote evolutionary adaptation of forest trees to climate change. Forest Ecology and Management, 2010, 259, 1003-1008.	3.2	129

#	Article	IF	Citations
55	Recruitment requirements of the rare and threatened Juncus atratus. Flora: Morphology, Distribution, Functional Ecology of Plants, 2010, 205, 583-589.	1.2	17
56	Lifespan, lifetime reproductive performance and paternity loss of within-pair and extra-pair offspring in the coal tit Periparus ater. Proceedings of the Royal Society B: Biological Sciences, 2009, 276, 337-345.	2.6	41
57	Increases in air temperature can promote wind-driven dispersal and spread of plants. Proceedings of the Royal Society B: Biological Sciences, 2009, 276, 3081-3087.	2.6	72
58	Rethinking the common garden in invasion research. Perspectives in Plant Ecology, Evolution and Systematics, 2009, 11, 311-320.	2.7	73
59	Assessing the risk of gene flow from genetically modified trees carrying mitigation transgenes. Biological Invasions, 2008, 10, 281-290.	2.4	10
60	Dealing with virtual aggregation â€“ a new index for analysing heterogeneous point patterns. Ecography, 2008, 31, 545-555.	4.5	30
61	Plant fecundity and seed dispersal in spatially heterogeneous environments: models, mechanisms and estimation. Journal of Ecology, 2008, 96, 628-641.	4.0	114
62	Costs of persistence and the spread of competing seeders and sprouters. Journal of Ecology, 2008, 96, 679-686.	4.0	46
63	Assessing the importance of seed immigration on coexistence of plant functional types in a species-rich ecosystem. Ecological Modelling, 2008, 213, 402-416.	2.5	26
64	Mechanisms of long-distance seed dispersal. Trends in Ecology and Evolution, 2008, 23, 638-647.	8.7	705
65	The state of plant population modelling in light of environmental change. Perspectives in Plant Ecology, Evolution and Systematics, 2008, 9, 171-189.	2.7	107
66	Predicting global change impacts on plant speciesâ€™ distributions: Future challenges. Perspectives in Plant Ecology, Evolution and Systematics, 2008, 9, 137-152.	2.7	966
67	Methods to account for spatial autocorrelation in the analysis of species distributional data: a review. Ecography, 2007, 30, 609-628.	4.5	2,522
68	AIR-MEDIATED POLLEN FLOW FROM GENETICALLY MODIFIED TO CONVENTIONAL CROPS. , 2007, 17, 431-440.		40
69	Polyandry in coal tits Parus ater: fitness consequences of putting eggs into multiple genetic baskets. Journal of Evolutionary Biology, 2007, 20, 1115-1125.	1.7	15
70	Colonization and persistence ability explain the extent to which plant species fill their potential range. Global Ecology and Biogeography, 2007, 16, 449-459.	5.8	92
71	A flexible modelling framework linking the spatio-temporal dynamics of plant genotypes and populations: Application to gene flow from transgenic forests. Ecological Modelling, 2007, 202, 476-486.	2.5	36
72	Colonization and persistence ability explain the extent to which plant species fill their potential range. Global Ecology and Biogeography, 2007, .	5.8	0

#	Article	IF	Citations
73	A mechanistic model for secondary seed dispersal by wind and its experimental validation. Journal of Ecology, 2005, 93, 1017-1028.	4.0	122
74	PATERNAL GENETIC EFFECTS ON OFFSPRING FITNESS ARE CONTEXT DEPENDENT: WITHIN THE EXTRAPAIR MATING SYSTEM OF A SOCIALLY: MONOGAMOUS PASSERINE. Evolution; International Journal of Organic Evolution, 2005, 59, 645-657.	2.3	47
75	Paternal genetic effects on offspring fitness are context dependent within the extrapair mating system of a socially monogamous passerine. Evolution; International Journal of Organic Evolution, 2005, 59, 645-57.	2.3	45
76	Seed dispersal by cattle may cause shrub encroachment of Grewia flava on southern Kalahari rangelands. Applied Vegetation Science, 2004, 7, 89-102.	1.9	40
77	Spatial pattern formation in semi-arid shrubland: a priori predicted versus observed pattern characteristics. Plant Ecology, 2004, 173, 271-282.	1.6	87
78	Seed dispersal by cattle may cause shrub encroachment of Grewia flava on southern Kalahari rangelands. Applied Vegetation Science, 2004, 7, 89.	1.9	27
79	Forecasting plant migration rates: managing uncertainty for risk assessment. Journal of Ecology, 2003, 91, 341-347.	4.0	204
80	Spatial patterns of plant association in grazed and ungrazed shrublands in the semi-arid Karoo, South Africa. Journal of Vegetation Science, 2000, 11, 253-258.	2.2	15
81	Long-Distance Seed Dispersal. , 0, , 204-237.		18
82	Key impacts of climate engineering on biodiversity and ecosystems, with priorities for future research. Journal of Integrative Environmental Sciences, 0, , 1-26.	2.5	11
83	The value of remotely sensed vs. field-surveyed habitat structure for predicting bird abundance: a case study in traditional orchards. Journal of Ornithology, 0, , 1.	1.1	0
