#	ARTICLE	IF	CITATIONS
1	Climateâ€™land-use interactions shape tropical mountain biodiversity and ecosystem functions. <i>Nature</i> , 2019, 568, 88-92.	27.8	313
2	Predictors of elevational biodiversity gradients change from single taxa to the multi-taxa community level. <i>Nature Communications</i> , 2016, 7, 13736.	12.8	229
3	Airborne LiDAR reveals context dependence in the effects of canopy architecture on arthropod diversity. <i>Forest Ecology and Management</i> , 2014, 312, 129-137.	3.2	44
4	Arthropod species richness in the Norway Spruce (<i>Picea abies</i> (L.) Karst.) canopy along an elevation gradient. <i>Forest Ecology and Management</i> , 2010, 259, 1513-1521.	3.2	36
5	Species richness is more important for ecosystem functioning than species turnover along an elevational gradient. <i>Nature Ecology and Evolution</i> , 2021, 5, 1582-1593.	7.8	35
6	Climate and food resources shape species richness and trophic interactions of cavityâ€™nesting Hymenoptera. <i>Journal of Biogeography</i> , 2020, 47, 854-865.	3.0	26
7	Variation in nutrient use in ant assemblages along an extensive elevational gradient on Mt Kilimanjaro. <i>Journal of Biogeography</i> , 2014, 41, 2245-2255.	3.0	24
8	Heterogeneous patterns of abundance of epigeic arthropod taxa along a major elevation gradient. <i>Biotropica</i> , 2017, 49, 217-228.	1.6	12
9	Potential of Airborne LiDAR Derived Vegetation Structure for the Prediction of Animal Species Richness at Mount Kilimanjaro. <i>Remote Sensing</i> , 2022, 14, 786.	4.0	1
