#	ARTICLE	IF	CITATIONS
1	Do plant–soil interactions influence how the microbial community responds to environmental change?. <i>Ecology</i> , 2022, 103, e03554.	1.5	7
2	Intra-annual precipitation effects on annual grassland productivity and phenology are moderated by community responses. <i>Journal of Ecology</i> , 2022, 110, 162-172.	1.9	10
3	Knowledge sharing for shared success in the decade on ecosystem restoration. <i>Ecological Solutions and Evidence</i> , 2022, 3, e12117.	0.8	18
4	Seed bank bias: Differential tracking of functional traits in the seed bank and vegetation across a gradient. <i>Ecology</i> , 2022, 103, e3651.	1.5	7
5	The long and the short of it: Mechanisms of synchronous and compensatory dynamics across temporal scales. <i>Ecology</i> , 2022, 103, e3650.	1.5	18
6	Winters are changing: snow effects on Arctic and alpine tundra ecosystems. <i>Arctic Science</i> , 2022, 8, 572-608.	0.9	43
7	Do trade-offs govern plant species' responses to different global change treatments?. <i>Ecology</i> , 2022, 103, e3626.	1.5	5
8	Global change restructures alpine plant communities through interacting abiotic and biotic effects. <i>Ecology Letters</i> , 2022, 25, 1813-1826.	3.0	10
9	Taking climate change into account: Non-stationarity in climate drivers of ecological response. <i>Journal of Ecology</i> , 2021, 109, 1491-1500.	1.9	12
10	Micro-scale geography of synchrony in a serpentine plant community. <i>Journal of Ecology</i> , 2021, 109, 750-762.	1.9	10
11	Connectivity: insights from the U.S. Long Term Ecological Research Network. <i>Ecosphere</i> , 2021, 12, e03432.	1.0	4
12	Experimental warming differentially affects vegetative and reproductive phenology of tundra plants. <i>Nature Communications</i> , 2021, 12, 3442.	5.8	56
13	Determinants of community compositional change are equally affected by global change. <i>Ecology Letters</i> , 2021, 24, 1892-1904.	3.0	27
14	Drivers of seedling establishment success in dryland restoration efforts. <i>Nature Ecology and Evolution</i> , 2021, 5, 1283-1290.	3.4	75
15	Biotic vs abiotic controls on temporal sensitivity of primary production to precipitation across North American drylands. <i>New Phytologist</i> , 2021, 231, 2150-2161.	3.5	18
16	Water the odds? Spring rainfall and emergence-related seed traits drive plant recruitment. <i>Oikos</i> , 2021, 130, 1665-1678.	1.2	11
17	The spatial synchrony of species richness and its relationship to ecosystem stability. <i>Ecology</i> , 2021, 102, e03486.	1.5	15
18	Catchment-scale observations at the Niwot Ridge <scp>long-term</scp> ecological research site. <i>Hydrological Processes</i> , 2021, 35, e14320.	1.1	3

#	ARTICLE	IF	CITATIONS
19	The influence of life history strategy on ecosystem sensitivity to resource fluctuations. <i>Journal of Ecology</i> , 2021, 109, 4081-4091.	1.9	1
20	Making research relevant: Sharing climate change research with rangeland advisors to transform results into drought resilience. <i>Rangelands</i> , 2021, 43, 185-193.	0.9	2
21	Nematode community diversity and function across an alpine landscape undergoing plant colonization of previously unvegetated soils. <i>Soil Biology and Biochemistry</i> , 2021, 161, 108380.	4.2	11
22	Nitrogen addition, not heterogeneity, alters the relationship between invasion and native decline in California grasslands. <i>Oecologia</i> , 2021, 197, 651-660.	0.9	2
23	Evidence for phosphorus limitation in high-elevation unvegetated soils, Niwot Ridge, Colorado. <i>Biogeochemistry</i> , 2020, 147, 1-13.	1.7	9
24	Temporal variability in production is not consistently affected by global change drivers across herbaceous-dominated ecosystems. <i>Oecologia</i> , 2020, 194, 735-744.	0.9	8
25	The elusive search for tipping points. <i>Nature Ecology and Evolution</i> , 2020, 4, 1449-1450.	3.4	23
26	Warming of alpine tundra enhances belowground production and shifts community towards resource acquisition traits. <i>Ecosphere</i> , 2020, 11, e03270.	1.0	10
27	Growing season length and soil microbes influence the performance of a generalist bunchgrass beyond its current range. <i>Ecology</i> , 2020, 101, e03095.	1.5	13
28	A new variance ratio metric to detect the timescale of compensatory dynamics. <i>Ecosphere</i> , 2020, 11, e03114.	1.0	14
29	The presence of a foreign microbial community promotes plant growth and reduces filtering of root fungi in the arctic-alpine plant <i>Silene acaulis</i> . <i>Plant Ecology and Diversity</i> , 2020, 13, 377-390.	1.0	2
30	Seeking diverse nominations for ESA awards. <i>Frontiers in Ecology and the Environment</i> , 2019, 17, 303-303.	1.9	0
31	Rainfall variability maintains grass-forb species coexistence. <i>Ecology Letters</i> , 2019, 22, 1658-1667.	3.0	75
32	Potential vulnerability of 348 herbaceous species to atmospheric deposition of nitrogen and sulfur in the United States. <i>Nature Plants</i> , 2019, 5, 697-705.	4.7	52
33	Litter-driven feedbacks influence plant colonization of a high elevation early successional ecosystem. <i>Plant and Soil</i> , 2019, 444, 71-85.	1.8	10
34	Environmental gradients determine the potential for ecosystem engineering effects. <i>Oikos</i> , 2019, 128, 994-1004.	1.2	9
35	When and where plant-soil feedback may promote plant coexistence: a meta-analysis. <i>Ecology Letters</i> , 2019, 22, 1274-1284.	3.0	195
36	Building Ecological Resilience in Highly Modified Landscapes. <i>BioScience</i> , 2019, 69, 80-92.	2.2	32

#	ARTICLE	IF	CITATIONS
37	Soil Microbial Networks Shift Across a High-Elevation Successional Gradient. <i>Frontiers in Microbiology</i> , 2019, 10, 2887.	1.5	14
38	Leaf temperatures mediate alpine plant communities' response to a simulated extended summer. <i>Ecology and Evolution</i> , 2019, 9, 1227-1243.	0.8	3
39	The effects of nitrogen deposition and invasion on litter fuel quality and decomposition in a <i>Stipa pulchra</i> grassland. <i>Journal of Arid Environments</i> , 2019, 162, 35-44.	1.2	9
40	Warming shortens flowering seasons of tundra plant communities. <i>Nature Ecology and Evolution</i> , 2019, 3, 45-52.	3.4	79
41	Keep ecological restoration open and flexible. <i>Nature Ecology and Evolution</i> , 2018, 2, 580-580.	3.4	25
42	Animals alter precipitation legacies: Trophic and ecosystem engineering effects on plant community temporal dynamics. <i>Journal of Ecology</i> , 2018, 106, 1454-1469.	1.9	7
43	Tradeoffs in demographic mechanisms underlie differences in species abundance and stability. <i>Nature Communications</i> , 2018, 9, 5047.	5.8	16
44	Tundra Trait Team: A database of plant traits spanning the tundra biome. <i>Global Ecology and Biogeography</i> , 2018, 27, 1402-1411.	2.7	57
45	Topographic heterogeneity explains patterns of vegetation response to climate change (1972–2008) across a mountain landscape, Niwot Ridge, Colorado. <i>Arctic, Antarctic, and Alpine Research</i> , 2018, 50, .	0.4	31
46	Navigating Novelty and Risk in Resilience Management. <i>Trends in Ecology and Evolution</i> , 2018, 33, 863-873.	4.2	29
47	Patterns of root colonization by arbuscular mycorrhizal fungi and dark septate endophytes across a mostly-unvegetated, high-elevation landscape. <i>Fungal Ecology</i> , 2018, 36, 63-74.	0.7	55
48	Plant functional trait change across a warming tundra biome. <i>Nature</i> , 2018, 562, 57-62.	13.7	451
49	Plant diversity and density predict belowground diversity and function in an early successional alpine ecosystem. <i>Ecology</i> , 2018, 99, 1942-1952.	1.5	83
50	Rapid temporal changes in root colonization by arbuscular mycorrhizal fungi and fine root endophytes, not dark septate endophytes, track plant activity and environment in an alpine ecosystem. <i>Mycorrhiza</i> , 2018, 28, 717-726.	1.3	24
51	Ecological winners and losers of extreme drought in California. <i>Nature Climate Change</i> , 2018, 8, 819-824.	8.1	65
52	Functional diversity increases ecological stability in a grazed grassland. <i>Oecologia</i> , 2017, 183, 831-840.	0.9	56
53	Can community structure track sea-level rise? Stress and competitive controls in tidal wetlands. <i>Ecology and Evolution</i> , 2017, 7, 1276-1285.	0.8	29
54	Plant colonization of moss-dominated soils in the alpine: Microbial and biogeochemical implications. <i>Soil Biology and Biochemistry</i> , 2017, 111, 135-142.	4.2	32

#	ARTICLE	IF	CITATIONS
55	Positive litter feedbacks of an introduced species reduce native diversity and promote invasion in Californian grasslands. <i>Applied Vegetation Science</i> , 2017, 20, 28-39.	0.9	22
56	Seed-associated fungi in the alpine tundra: Both mutualists and pathogens could impact plant recruitment. <i>Fungal Ecology</i> , 2017, 30, 10-18.	0.7	18
57	Where and how to restore in a changing world: a demographic-based assessment of resilience. <i>Journal of Applied Ecology</i> , 2017, 54, 1040-1050.	1.9	28
58	Separating sources of density-dependent and density-independent establishment limitation in invading species. <i>Journal of Ecology</i> , 2017, 105, 436-444.	1.9	8
59	Lagging behind: have we overlooked previous-year rainfall effects in annual grasslands?. <i>Journal of Ecology</i> , 2017, 105, 484-495.	1.9	72
60	Ecosystem function in complex mountain terrain: Combining models and long-term observations to advance process-based understanding. <i>Journal of Geophysical Research C: Biogeosciences</i> , 2017, 122, 825-845.	1.3	19
61	Opportunities and Constraints in Characterizing Landscape Distribution of an Invasive Grass from Very High Resolution Multi-Spectral Imagery. <i>Frontiers in Plant Science</i> , 2017, 8, 890.	1.7	12
62	Climate Variability Structures Plant Community Dynamics in Mediterranean Restored and Reference Tidal Wetlands. <i>Water (Switzerland)</i> , 2017, 9, 209.	1.2	8
63	Incorporating biotic factors in species distribution modeling: are interactions with soil microbes important?. <i>Ecography</i> , 2016, 39, 970-980.	2.1	25
64	Grassland compost amendments increase plant production without changing plant communities. <i>Ecosphere</i> , 2016, 7, e01270.	1.0	11
65	Scaling up the diversity-resilience relationship with trait databases and remote sensing data: the recovery of productivity after wildfire. <i>Global Change Biology</i> , 2016, 22, 1421-1432.	4.2	41
66	Can functional traits predict plant community response to global change?. <i>Ecosphere</i> , 2016, 7, e01602.	1.0	49
67	Conditional vulnerability of plant diversity to atmospheric nitrogen deposition across the United States. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2016, 113, 4086-4091.	3.3	287
68	Transitions and invasion along a grazing gradient in experimental California grasslands. <i>Ecology</i> , 2016, 97, 2319-2330.	1.5	20
69	Prescribed Fire Effects on Population Dynamics of an Annual Grassland. <i>Rangeland Ecology and Management</i> , 2016, 69, 423-429.	1.1	2
70	Neotropical rainforest restoration: comparing passive, plantation and nucleation approaches. <i>Biodiversity and Conservation</i> , 2016, 25, 2021-2034.	1.2	75
71	Embracing variability: environmental dependence and plant community context in ecological restoration. <i>Restoration Ecology</i> , 2016, 24, 119-127.	1.4	16
72	Teasing apart plant community responses to N enrichment: the roles of resource limitation, competition and soil microbes. <i>Ecology Letters</i> , 2016, 19, 1287-1296.	3.0	81

#	ARTICLE	IF	CITATIONS
73	Cattle as Dispersal Vectors of Invasive and Introduced Plants in a California Annual Grassland. <i>Rangeland Ecology and Management</i> , 2016, 69, 52-58.	1.1	35
74	Stronger effect of gastropods than rodents on seedling establishment, irrespective of exotic or native plant species origin. <i>Oikos</i> , 2016, 125, 1467-1477.	1.2	11
75	Optimizing Available Network Resources to Address Questions in Environmental Biogeochemistry. <i>BioScience</i> , 2016, 66, 317-326.	2.2	20
76	Ecological Dynamics and Ecological Restoration. , 2016, , 27-56.		13
77	Grassland Arthropods Are Controlled by Direct and Indirect Interactions with Cattle but Are Largely Unaffected by Plant Provenance. <i>PLoS ONE</i> , 2015, 10, e0129823.	1.1	14
78	An overview of research from a high elevation landscape: the Niwot Ridge, Colorado Long Term Ecological Research programme. <i>Plant Ecology and Diversity</i> , 2015, 8, 597-605.	1.0	18
79	Plant-microbe interactions at multiple scales across a high-elevation landscape. <i>Plant Ecology and Diversity</i> , 2015, 8, 703-712.	1.0	15
80	Competition and soil resource environment alter plant-soil feedbacks for native and exotic grasses. <i>AoB PLANTS</i> , 2015, 7, .	1.2	47
81	Assembly of root-associated bacteria communities: interactions between abiotic and biotic factors. <i>Environmental Microbiology Reports</i> , 2015, 7, 102-110.	1.0	20
82	Plasticity in nitrogen form uptake and preference in response to long-term nitrogen fertilization. <i>Plant and Soil</i> , 2015, 394, 215-224.	1.8	47
83	Committing to ecological restoration. <i>Science</i> , 2015, 348, 638-640.	6.0	393
84	Indirect effects of global change accumulate to alter plant diversity but not ecosystem function in alpine tundra. <i>Journal of Ecology</i> , 2015, 103, 351-360.	1.9	32
85	Vegetation change at high elevation: scale dependence and interactive effects on Niwot Ridge. <i>Plant Ecology and Diversity</i> , 2015, 8, 713-725.	1.0	40
86	Evaluating Ecosystem Services Provided by Non-Native Species: An Experimental Test in California Grasslands. <i>PLoS ONE</i> , 2014, 9, e75396.	1.1	13
87	Shrub Expansion Over the Past 62 Years in Rocky Mountain Alpine Tundra: Possible Causes and Consequences. <i>Arctic, Antarctic, and Alpine Research</i> , 2014, 46, 616-631.	0.4	54
88	Nitrogen deposition alters plant-fungal relationships: linking belowground dynamics to aboveground vegetation change. <i>Molecular Ecology</i> , 2014, 23, 1364-1378.	2.0	65
89	Managing the whole landscape: historical, hybrid, and novel ecosystems. <i>Frontiers in Ecology and the Environment</i> , 2014, 12, 557-564.	1.9	378
90	Applying competition theory to invasion: resource impacts indicate invasion mechanisms in California shrublands. <i>Biological Invasions</i> , 2014, 16, 191-203.	1.2	32

#	ARTICLE	IF	CITATIONS
91	Staged invasions across disparate grasslands: effects of seed provenance, consumers and disturbance on productivity and species richness. <i>Ecology Letters</i> , 2014, 17, 499-507.	3.0	47
92	Using functional diversity patterns to explore metacommunity dynamics: a framework for understanding local and regional influences on community structure. <i>Ecography</i> , 2014, 37, 939-949.	2.1	57
93	Separating direct and indirect effects of global change: a population dynamic modeling approach using readily available field data. <i>Global Change Biology</i> , 2014, 20, 1238-1250.	4.2	17
94	Intra-annual rainfall regime shifts competitive interactions between coastal sage scrub and invasive grasses. <i>Ecology</i> , 2014, 95, 425-435.	1.5	43
95	Biotic mechanisms of community stability shift along a precipitation gradient. <i>Ecology</i> , 2014, 95, 1693-1700.	1.5	161
96	Resilience in ecology: Abstraction, distraction, or where the action is?. <i>Biological Conservation</i> , 2014, 177, 43-51.	1.9	325
97	Altered water and nitrogen input shifts succession in a southern California coastal sage community. <i>Ecological Applications</i> , 2014, 24, 1390-1404.	1.8	77
98	Nitrogen deposition, plant carbon allocation, and soil microbes: Changing interactions due to enrichment. <i>American Journal of Botany</i> , 2013, 100, 1458-1470.	0.8	42
99	Sensitivity of grassland plant community composition to spatial vs. temporal variation in precipitation. <i>Ecology</i> , 2013, 94, 1687-1696.	1.5	191
100	A leak in the loop. <i>Nature</i> , 2013, 503, 472-473.	13.7	5
101	Botany and a changing world: Introduction to the Special Issue on Global Biological Change. <i>American Journal of Botany</i> , 2013, 100, 1229-1233.	0.8	7
102	Consequences of plant-soil feedbacks in invasion. <i>Journal of Ecology</i> , 2013, 101, 298-308.	1.9	174
103	Changes in alpine vegetation over 21 years: Are patterns across a heterogeneous landscape consistent with predictions?. <i>Ecosphere</i> , 2013, 4, 1-18.	1.0	78
104	Effect of propagule pressure on recovery of a California grassland after an extreme disturbance. <i>Journal of Vegetation Science</i> , 2013, 24, 1043-1052.	1.1	27
105	Single-trait functional indices outperform multi-trait indices in linking environmental gradients and ecosystem services in a complex landscape. <i>Journal of Ecology</i> , 2013, 101, 9-17.	1.9	137
106	Bounded ranges of variation as a framework for future conservation and fire management. <i>Annals of the New York Academy of Sciences</i> , 2013, 1286, 92-107.	1.8	40
107	Do We Practice What We Preach? Goal Setting for Ecological Restoration. <i>Restoration Ecology</i> , 2013, 21, 312-319.	1.4	89
108	Plant-soil feedbacks: the past, the present and future challenges. <i>Journal of Ecology</i> , 2013, 101, 265-276.	1.9	1,259
