Version: 2024-02-01

83 papers	6,558 citations	117625 34 h-index	71685 76 g-index
94 all docs	94 docs citations	94 times ranked	10389 citing authors

#	Article	IF	Citations
1	The internal structure of metacommunities. Oikos, 2022, 2022, .	2.7	32
2	Climateâ€driven, but dynamic and complex? A reconciliation of competing hypotheses for speciesâ€™ distributions. Ecology Letters, 2022, 25, 38-51.	6.4	20
3	The evidence contained in the P-value is context dependent. Trends in Ecology and Evolution, 2022, 37, 569-570.	8.7	7
4	Studying speciation and extinction dynamics from phylogenies: addressing identifiability issues. Trends in Ecology and Evolution, 2022, 37, 497-506.	8.7	33
5	Is Variation in Conspecific Negative Density Dependence Driving Tree Diversity Patterns at Large Scales?. Trends in Ecology and Evolution, 2021, 36, 151-163.	8.7	34
6	Explainable artificial intelligence enhances the ecological interpretability of blackâ€box species distribution models. Ecography, 2021, 44, 199-205.	4.5	64
7	Inferring species interactions using Granger causality and convergent cross mapping. Theoretical Ecology, 2021, 14, 87-105.	1.0	26
8	Species and genetic diversity patterns show different responses to land use intensity in central European grasslands. Diversity and Distributions, 2021, 27, 392-401.	4.1	4
9	Towards robust statistical inference for complex computer models. Ecology Letters, 2021, 24, 1251-1261.	6.4	22
10	Linking functional traits and demography to model species-rich communities. Nature Communications, 2021, 12, 2724.	12.8	26
11	Siberian plants shift their phenology in response to climate change. Global Change Biology, 2021, 27, 4435-4448.	9.5	40
12	gen3sis: A general engine for eco-evolutionary simulations of the processes that shape Earthâ€™s biodiversity. PLoS Biology, 2021, 19, e3001340.	5.6	54
13	A new joint species distribution model for faster and more accurate inference of species associations from big community data. Methods in Ecology and Evolution, 2021, 12, 2159-2173.	5.2	27
14	Sequential Monte-Carlo algorithms for Bayesian model calibration â€“ A review and method comparisonâœ°. Ecological Modelling, 2021, 455, 109608.	2.5	10
15	Environmental heterogeneity predicts global species richness patterns better than area. Global Ecology and Biogeography, 2021, 30, 842-851.	5.8	32
16	Advancing an interdisciplinary framework to study seed dispersal ecology. AoB PLANTS, 2020, 12, plz048.	2.3	30
17	Bayesian calibration of a growthâ€dependent tree mortality model to simulate the dynamics of European temperate forests. Ecological Applications, 2020, 30, e02021.	3.8	12
18	Machine learning algorithms to infer traitâ€matching and predict species interactions in ecological networks. Methods in Ecology and Evolution, 2020, 11, 281-293.	5.2	82

#	Article	IF	Citations
19	Available and missing data to model impact of climate change on European forests. Ecological Modelling, 2020, 416, 108870.	2.5	58
20	Towards a New Generation of Trait-Flexible Vegetation Models. Trends in Ecology and Evolution, 2020, 35, 191-205.	8.7	59
21	Plant species richness increases with light availability, but not variability, in temperate forests understorey. BMC Ecology, 2020, 20, 43.	3.0	53
22	The Minimum Detectable Difference (MDD) Concept for Establishing Trust in Nonsignificant Results: A Critical Review. Environmental Toxicology and Chemistry, 2020, 39, 2109-2123.	4.3	18
23	r3PG â€“ An <scp>r</scp> package for simulating forest growth using the 3â€PG processâ€based model. Methods in Ecology and Evolution, 2020, 11, 1470-1475.	5.2	24
24	The influence of camera trap flash type on the behavioural reactions and trapping rates of red deer and roe deer. Remote Sensing in Ecology and Conservation, 2020, 6, 399-410.	4.3	11
25	Assessing the response of forest productivity to climate extremes in Switzerland using modelâ€“data fusion. Global Change Biology, 2020, 26, 2463-2476.	9.5	54
26	The PROFOUND Database for evaluating vegetation models and simulating climate impacts on European forests. Earth System Science Data, 2020, 12, 1295-1320.	9.9	33
27	The multi-dimensional nature of information drives prioritization of private over social information in ants. Proceedings of the Royal Society B: Biological Sciences, 2019, 286, 20191136.	2.6	31
28	Defaunation of large-bodied frugivores reduces carbon storage in a tropical forest of Southeast Asia. Scientific Reports, 2019, 9, 10015.	3.3	24
29	Global warming likely to enhance black locust (Robinia pseudoacacia L.) growth in a Mediterranean riparian forest. Forest Ecology and Management, 2019, 449, 117448.	3.2	23
30	Calibrating an Individualâ€Based Movement Model to Predict Functional Connectivity for Little Owls. Bulletin of the Ecological Society of America, 2019, 100, e01541.	0.2	0
31	A Minimal Model for the Latitudinal Diversity Gradient Suggests a Dominant Role for Ecological Limits. American Naturalist, 2019, 194, E122-E133.	2.1	41
32	The total dispersal kernel: a review and future directions. AoB PLANTS, 2019, 11, plz042.	2.3	56
33	A model with many small shifts for estimating species-specific diversification rates. Nature Ecology and Evolution, 2019, 3, 1086-1092.	7.8	96
34	Calibrating an individualâ€based movement model to predict functional connectivity for little owls. Ecological Applications, 2019, 29, e01873.	3.8	19
35	The Recruitment Niche Predicts Plant Community Assembly Across a Hydrological Gradient Along Plowed and Undisturbed Transects in a Former Agricultural Wetland. Frontiers in Plant Science, 2019, 10, 88.	3.6	28
36	Rapid changes in seed dispersal traits may modify plant responses to global change. AoB PLANTS, 2019, 11, plz020.	2.3	32

#	Article	IF	Citations
37	Tree mortality submodels drive simulated longâ€term forest dynamics: assessing 15 models from the stand to global scale. Ecosphere, 2019, 10, e02616.	2.2	93
38	Employing plant functional groups to advance seed dispersal ecology and conservation. AoB PLANTS, 2019, 11, plz006.	2.3	27
39	The Latitudinal Diversity Gradient: Novel Understanding through Mechanistic Eco-evolutionary Models. Trends in Ecology and Evolution, 2019, 34, 211-223.	8.7	151
40	Chilling and forcing temperatures interact to predict the onset of wood formation in Northern Hemisphere conifers. Global Change Biology, 2019, 25, 1089-1105.	9.5	72
41	An R package facilitating sensitivity analysis, calibration and forward simulations with the LPJ-GUESS dynamic vegetation model. Environmental Modelling and Software, 2019, 111, 55-60.	4.5	7
42	Model averaging in ecology: a review of Bayesian, informationâ€theoretic, and tactical approaches for predictive inference. Ecological Monographs, 2018, 88, 485-504.	5.4	209
43	A comparison of methods for estimating plant population size. Biodiversity and Conservation, 2018, 27, 2021-2028.	2.6	16
44	Lastâ€century forest productivity in a managed dryâ€edge Scots pine population: the two sides of climate warming. Ecological Applications, 2018, 28, 95-105.	3.8	22
45	An extended empirical saddlepoint approximation for intractable likelihoods. Electronic Journal of Statistics, 2018, 12, .	0.7	12
46	Comment on â€œPlant diversity increases with the strength of negative density dependence at the global scaleâ€• Science, 2018, 360, .	12.6	19
47	Using synthetic data to evaluate the benefits of large field plots for forest biomass estimation with LiDAR. Remote Sensing of Environment, 2018, 213, 115-128.	11.0	31
48	Biotic interactions in species distribution modelling: 10 questions to guide interpretation and avoid false conclusions. Global Ecology and Biogeography, 2018, 27, 1004-1016.	5.8	211
49	The NUCOMBog R package for simulating vegetation, water, carbon and nitrogen dynamics in peatlands. Ecological Informatics, 2017, 40, 35-39.	5.2	1
50	Functional flower traits and their diversity drive pollinator visitation. Oikos, 2017, 126, 1020-1030.	2.7	80
51	Crossâ€validation strategies for data with temporal, spatial, hierarchical, or phylogenetic structure. Ecography, 2017, 40, 913-929.	4.5	1,092
52	Identifying local drivers of a vector-pathogen-disease system using Bayesian modeling. Basic and Applied Ecology, 2017, 18, 75-85.	2.7	11
53	Structure and community composition in a tropical forest suggest a change of ecological processes during stand development. Forest Ecology and Management, 2017, 404, 100-107.	3.2	32
54	Do roe deer react to wildlife warning reflectors? A test combining a controlled experiment with field observations. European Journal of Wildlife Research, 2017, 63, 1.	1.4	34

#	Article	IF	Citations
55	Productivity of Fagus sylvatica under climate change â€“ A Bayesian analysis of risk and uncertainty using the model 3-PG. Forest Ecology and Management, 2017, 401, 192-206.	3.2	31
56	Mechanistic simulation models in macroecology and biogeography: stateâ€ofâ€art and prospects. Ecography, 2017, 40, 267-280.	4.5	127
57	Heavy and frequent thinning promotes drought adaptation in Pinus sylvestris forests. Ecological Applications, 2016, 26, 2190-2205.	3.8	95
58	Intraspecific trait variation across scales: implications for understanding global change responses. Global Change Biology, 2016, 22, 137-150.	9.5	238
59	Community dynamics under environmental change: How can next generation mechanistic models improve projections of species distributions?. Ecological Modelling, 2016, 326, 63-74.	2.5	66
60	Estimating over- and understorey canopy density of temperate mixed stands by airborne LiDAR data. Forestry, 2016, 89, 69-81.	2.3	52
61	Bayesian inference of environmental and biotic factors determining the occurrence of the grapevine disease â€˜bois noir'. Ecosphere, 2015, 6, 1-13.	2.2	14
62	Stratified aboveground forest biomass estimation by remote sensing data. International Journal of Applied Earth Observation and Geoinformation, 2015, 38, 229-241.	2.8	56
63	Technical Note: Approximate Bayesian parameterization of a process-based tropical forest model. Biogeosciences, 2014, 11, 1261-1272.	3.3	31
64	On the Sympatric Evolution and Evolutionary Stability of Coexistence by Relative Nonlinearity of Competition. PLoS ONE, 2014, 9, e94454.	2.5	8
65	Ecological and economic conditions and associated institutional challenges for conservation banking in dynamic landscapes. Landscape and Urban Planning, 2014, 130, 64-72.	7.5	70
66	Importance of sample size, data type and prediction method for remote sensing-based estimations of aboveground forest biomass. Remote Sensing of Environment, 2014, 154, 102-114.	11.0	290
67	EU agricultural reform fails on biodiversity. Science, 2014, 344, 1090-1092.	12.6	449
68	Bayesian calibration, comparison and averaging of six forest models, using data from Scots pine stands across Europe. Forest Ecology and Management, 2013, 289, 255-268.	3.2	79
69	Process, correlation and parameter fitting in species distribution models: a response to Kriticos etÂal. Journal of Biogeography, 2013, 40, 612-613.	3.0	8
70	Does model-free forecasting really outperform the true model?. Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, E3975.	7.1	16
71	On the Challenge of Fitting Tree Size Distributions in Ecology. PLoS ONE, 2013, 8, e58036.	2.5	15
72	Offsetting Policies for Biodiversity Conservation. Developments in Environmental Modelling, 2012, , 413-430.	0.3	1

#	Article	IF	Citations
73	How to understand speciesâ€™ niches and range dynamics: a demographic research agenda for biogeography. Journal of Biogeography, 2012, 39, 2146-2162.	3.0	249
74	Connecting dynamic vegetation models to data â€“ an inverse perspective. Journal of Biogeography, 2012, 39, 2240-2252.	3.0	144
75	Parameter and uncertainty estimation for processâ€oriented population and distribution models: data, statistics and the niche. Journal of Biogeography, 2012, 39, 2225-2239.	3.0	32
76	Correlation and process in species distribution models: bridging a dichotomy. Journal of Biogeography, 2012, 39, 2119-2131.	3.0	526
77	Statistical inference for stochastic simulation models - theory and application. Ecology Letters, 2011, 14, 816-827.	6.4	320
78	Biodiversity conservation in dynamic landscapes: tradeâ€offs between number, connectivity and turnover of habitat patches. Journal of Applied Ecology, 2011, 48, 1227-1235.	4.0	60
79	Conserving biodiversity with tradable permits under changing conservation costs and habitat restoration time lags. Ecological Economics, 2011, 70, 533-541.	5.7	50
80	EcoTRADE â€“ A multi-player network game of a tradable permit market for biodiversity credits. Environmental Modelling and Software, 2010, 25, 1479-1480.	4.5	32
81	Stay by thy neighbor? Social organization determines the efficiency of biodiversity markets with spatial incentives. Ecological Complexity, 2010, 7, 91-99.	2.9	40
82	Smart spatial incentives for market-based conservation. Biological Conservation, 2009, 142, 779-788.	4.1	78
83	The time horizon and its role in multiple species conservation planning. Biological Conservation, 2008, 141, 2625-2631.	4.1	11
