| #  | Article                                                                                                                                                                                                                                                                               | IF   | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | The association between physical activity time and neuropathy in longstanding type 1 diabetes: A<br>cross-sectional analysis of the Canadian study of longevity in type 1 diabetes. Journal of Diabetes and<br>Its Complications, 2022, 36, 108134.                                   | 2.3  | 5         |
| 2  | Orthostatic blood pressure changes and diabetes duration. Journal of Diabetes and Its Complications, 2022, 36, 108169.                                                                                                                                                                | 2.3  | 2         |
| 3  | Empagliflozin add-on therapy to closed-loop insulin delivery in type 1 diabetes: a 2 × 2 factorial<br>randomized crossover trial. Nature Medicine, 2022, 28, 1269-1276.                                                                                                               | 30.7 | 20        |
| 4  | Baseline omega-3 level is associated with nerve regeneration following 12-months of omega-3<br>nutrition therapy in patients with type 1 diabetes. Journal of Diabetes and Its Complications, 2021, 35,<br>107798.                                                                    | 2.3  | 10        |
| 5  | Changes in Cardiovascular Biomarkers Associated With the Sodium–Glucose Cotransporter 2 (SGLT2)<br>Inhibitor Ertugliflozin in Patients With Chronic Kidney Disease and Type 2 Diabetes. Diabetes Care, 2021,<br>44, e45-e47.                                                          | 8.6  | 22        |
| 6  | The complex association between pain and neuropathy. Muscle and Nerve, 2021, 63, 538-545.                                                                                                                                                                                             | 2.2  | 0         |
| 7  | Reducing the need for carbohydrate counting in type 1 diabetes using closedâ€loop automated insulin<br>delivery (artificial pancreas) and empagliflozin: A randomized, controlled, nonâ€inferiority, crossover<br>pilot trial. Diabetes, Obesity and Metabolism, 2021, 23, 1272-1281. | 4.4  | 19        |
| 8  | Vasopressin associated with renal vascular resistance in adults with longstanding type 1 diabetes with and without diabetic kidney disease. Journal of Diabetes and Its Complications, 2021, 35, 107807.                                                                              | 2.3  | 8         |
| 9  | Discoveries from the study of longstanding type 1 diabetes. Diabetologia, 2021, 64, 1189-1200.                                                                                                                                                                                        | 6.3  | 12        |
| 10 | Relationships between inflammation, hemodynamic function and RAAS in longstanding type 1 diabetes and diabetic kidney disease. Journal of Diabetes and Its Complications, 2021, 35, 107880.                                                                                           | 2.3  | 8         |
| 11 | Corneal Confocal Microscopy Predicts the Development of Diabetic Neuropathy: A Longitudinal<br>Diagnostic Multinational Consortium Study. Diabetes Care, 2021, 44, 2107-2114.                                                                                                         | 8.6  | 28        |
| 12 | Clinical profile and impact of comorbidities in patients with veryâ€lateâ€onset myasthenia gravis. Muscle<br>and Nerve, 2021, 64, 462-466.                                                                                                                                            | 2.2  | 13        |
| 13 | Changes in plasma and urine metabolites associated with empagliflozin in patients with type 1 diabetes.<br>Diabetes, Obesity and Metabolism, 2021, 23, 2466-2475.                                                                                                                     | 4.4  | 17        |
| 14 | The Prevalence of Autoimmune Diseases in Longstanding Diabetes: Results from the Canadian Study of<br>Longevity in Adults with Type 1 Diabetes. Canadian Journal of Diabetes, 2021, 45, 512-518.e1.                                                                                   | 0.8  | 4         |
| 15 | Markers of Kidney Injury, Inflammation, and Fibrosis Associated With Ertugliflozin in Patients With<br>CKD and Diabetes. Kidney International Reports, 2021, 6, 2095-2104.                                                                                                            | 0.8  | 23        |
| 16 | Analysis of Prevalence, Magnitude and Timing of the Dawn Phenomenon in Adults and Adolescents<br>With Type 1 Diabetes: Descriptive Analysis of 2 Insulin Pump Trials. Canadian Journal of Diabetes, 2020,<br>44, 229-235.                                                             | 0.8  | 11        |
| 17 | Quantitative sonographic evaluation of muscle thickness and fasciculation prevalence in healthy subjects. Muscle and Nerve, 2020, 61, 234-238.                                                                                                                                        | 2.2  | 13        |
| 18 | The utility of a single simple question in the evaluation of patients with nondiabetic polyneuropathy.<br>Muscle and Nerve, 2020, 61, 526-529.                                                                                                                                        | 2.2  | 4         |

| #  | Article                                                                                                                                                                                                                      | IF  | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | High fractional excretion of glycation adducts is associated with subsequent early decline in renal function in type 1 diabetes. Scientific Reports, 2020, 10, 12709.                                                        | 3.3 | 10        |
| 20 | 18 - Empagliflozin Is Associated With Increased Plasma Lipid Metabolites in Type 1 Diabetes. Canadian<br>Journal of Diabetes, 2020, 44, S7-S8.                                                                               | 0.8 | 0         |
| 21 | Superiority of sonographic evaluation of contracted versus relaxed muscle thickness in motor neuron diseases. Clinical Neurophysiology, 2020, 131, 1480-1486.                                                                | 1.5 | 10        |
| 22 | Rapid Corneal Nerve Fiber Loss: A Marker of Diabetic Neuropathy Onset and Progression. Diabetes<br>Care, 2020, 43, 1829-1835.                                                                                                | 8.6 | 40        |
| 23 | Randomized, controlled crossover study of IVIg for demyelinating polyneuropathy and diabetes.<br>Neurology: Neuroimmunology and NeuroInflammation, 2019, 6, .                                                                | 6.0 | 4         |
| 24 | Sex differences in neuropathy & neuropathic pain: A brief report from the Phase 2 Canadian Study of Longevity in Type 1 Diabetes. Journal of Diabetes and Its Complications, 2019, 33, 107397.                               | 2.3 | 8         |
| 25 | Baseline Decrement in Patients with Mild Myasthenia Gravis Predicts Immunomodulation Treatment.<br>Canadian Journal of Neurological Sciences, 2019, 46, 762-766.                                                             | 0.5 | 1         |
| 26 | European Federation of Neurological Societies cutoff values significantly reduce creatine kinase sensitivity for diagnosing neuromuscular disorders. Muscle and Nerve, 2019, 60, 748-752.                                    | 2.2 | 2         |
| 27 | 126 - Prevalence of Detectable C-peptide in Longstanding Type 1 Diabetes (T1D). Canadian Journal of<br>Diabetes, 2019, 43, S43.                                                                                              | 0.8 | 1         |
| 28 | Muscle thickness measured by ultrasound is reduced in neuromuscular disorders and correlates with clinical and electrophysiological findings. Muscle and Nerve, 2019, 60, 687-692.                                           | 2.2 | 20        |
| 29 | Elevated plasma cyclic guanosine monophosphate may explain greater efferent arteriolar tone in<br>adults with longstanding type 1 diabetes: A brief report. Journal of Diabetes and Its Complications,<br>2019, 33, 547-549. | 2.3 | 1         |
| 30 | Estimating GFR by Serum Creatinine, Cystatin C, and β2-Microglobulin in Older Adults: Results From the<br>Canadian Study of Longevity in Type 1 Diabetes. Kidney International Reports, 2019, 4, 786-796.                    | 0.8 | 12        |
| 31 | Risk factors for diabetic kidney disease in adults with longstanding type 1 diabetes: results from the<br>Canadian Study of Longevity in Diabetes. Renal Failure, 2019, 41, 427-433.                                         | 2.1 | 4         |
| 32 | Uric Acid Levels Correlate with Sensory Nerve Function in Healthy Subjects. Canadian Journal of<br>Neurological Sciences, 2019, 46, 337-341.                                                                                 | 0.5 | 4         |
| 33 | Renal Hemodynamic Function and RAAS Activation Over the Natural History of Type 1 Diabetes.<br>American Journal of Kidney Diseases, 2019, 73, 786-796.                                                                       | 1.9 | 15        |
| 34 | Association between uric acid, renal haemodynamics and arterial stiffness over the natural history of type 1 diabetes. Diabetes, Obesity and Metabolism, 2019, 21, 1388-1398.                                                | 4.4 | 12        |
| 35 | Bone mineral density in patients with longstanding type 1 diabetes: Results from the Canadian Study of<br>Longevity in Type 1 Diabetes. Journal of Diabetes and Its Complications, 2019, 33, 107324.                         | 2.3 | 21        |
| 36 | Ultrasound-Assisted Lumbar Puncture in a Neuromuscular Clinic has a High Success Rate and Less<br>Pain. Canadian Journal of Neurological Sciences, 2019, 46, 79-82.                                                          | 0.5 | 6         |

| #  | Article                                                                                                                                                                                                                                                          | IF  | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | The relationships between markers of tubular injury and intrarenal haemodynamic function in adults<br>with and without type 1 diabetes: Results from the Canadian Study of Longevity in Type 1 Diabetes.<br>Diabetes, Obesity and Metabolism, 2019, 21, 575-583. | 4.4 | 15        |
| 38 | Retinopathy and RAAS Activation: Results From the Canadian Study of Longevity in Type 1 Diabetes.<br>Diabetes Care, 2019, 42, 273-280.                                                                                                                           | 8.6 | 16        |
| 39 | Laboratory Abnormalities in Polyneuropathy and Electrophysiological Correlations. Canadian Journal of Neurological Sciences, 2018, 45, 346-349.                                                                                                                  | 0.5 | 3         |
| 40 | Sex differences in neuropathic pain intensity in diabetes. Journal of the Neurological Sciences, 2018, 388, 103-106.                                                                                                                                             | 0.6 | 38        |
| 41 | Adiposity Impacts Intrarenal Hemodynamic Function in Adults With Long-standing Type 1 Diabetes With<br>and Without Diabetic Nephropathy: Results From the Canadian Study of Longevity in Type 1 Diabetes.<br>Diabetes Care, 2018, 41, 831-839.                   | 8.6 | 13        |
| 42 | Nerve function varies with hemoglobin A1c in controls and type 2 diabetes. Journal of Diabetes and Its Complications, 2018, 32, 424-428.                                                                                                                         | 2.3 | 5         |
| 43 | High frequency of MGUS in DSP. Muscle and Nerve, 2018, 57, 1018-1021.                                                                                                                                                                                            | 2.2 | Ο         |
| 44 | Cramps frequency and severity are correlated with small and large nerve fiber measures in type 1 diabetes. Clinical Neurophysiology, 2018, 129, 122-126.                                                                                                         | 1.5 | 8         |
| 45 | Toronto Clinical Neuropathy Score is valid for a wide spectrum of polyneuropathies. European<br>Journal of Neurology, 2018, 25, 484-490.                                                                                                                         | 3.3 | 23        |
| 46 | Diabetes Care Disparities in Long-standing Type 1 Diabetes in Canada and the U.S.: A Cross-sectional Comparison. Diabetes Care, 2018, 41, 88-95.                                                                                                                 | 8.6 | 17        |

| 91 | Conduction Slowing in Diabetic Sensorimotor Polyneuropathy. Diabetes Care, 2013, 36, 3684-3690.                                                                                                                                                                 | 8.6 | 63        |
| 92 | The impact of common variation in the definition of diabetic sensorimotor polyneuropathy on the validity of corneal in vivo confocal microscopy in patients with type 1 diabetes: a brief report. Journal of Diabetes and Its Complications, 2013, 27, 240-242. | 2.3 | 15        |
| 93 | Comparison of diabetes patients with "demyelinating―diabetic sensorimotor polyneuropathy to those<br>diagnosed with <scp>CIDP</scp> . Brain and Behavior, 2013, 3, 656-663.                                                                                     | 2.2 | 21        |
| 94 | Point Accuracy of Interstitial Continuous Glucose Monitoring During Exercise in Type 1 Diabetes.<br>Diabetes Technology and Therapeutics, 2013, 15, 46-49.                                                                                                      | 4.4 | 47        |
| 95 | Structure-Function Relationship Between Corneal Nerves and Conventional Small-Fiber Tests in Type 1<br>Diabetes. Diabetes Care, 2013, 36, 2748-2755.                                                                                                            | 8.6 | 83        |
| 96 | Identification and Prediction of Diabetic Sensorimotor Polyneuropathy Using Individual and Simple Combinations of Nerve Conduction Study Parameters. PLoS ONE, 2013, 8, e58783.                                                                                 | 2.5 | 58        |
| 97 | Can Ultrasound of the Tibial Nerve Detect Diabetic Peripheral Neuropathy?. Diabetes Care, 2012, 35, 2575-2579.                                                                                                                                                  | 8.6 | 92        |
| 98 | Higher magnification lenses versus conventional lenses for evaluation of diabetic neuropathy by corneal in vivo confocal microscopy. Diabetes Research and Clinical Practice, 2012, 97, e37-e40.                                                                | 2.8 | 12        |
| 99 | Evaluation of Proxy Tests for SFSN: Evidence for Mixed Small and Large Fiber Dysfunction. PLoS ONE, 2012, 7, e42208.                                                                                                                                            | 2.5 | 14        |
