#	ARTICLE	IF	CITATIONS
1	Early concepts of intimacy: Young humans use saliva sharing to infer close relationships. <i>Science</i> , 2022, 375, 311-315.	6.0	19
2	Using machine learning to understand age and gender classification based on infant temperament. <i>PLoS ONE</i> , 2022, 17, e0266026.	1.1	1
3	What Could Go Wrong: Adults and Children Calibrate Predictions and Explanations of Others' Actions Based on Relative Reward and Danger. <i>Cognitive Science</i> , 2022, 46, .	0.8	2
4	Visual foundations of Euclidean geometry. <i>Cognitive Psychology</i> , 2022, 136, 101494.	0.9	4
5	The ability to predict actions of others from distributed cues is still developing in 6- to 8-year-old children. <i>Journal of Vision</i> , 2021, 21, 14.	0.1	0
6	Across demographics and recent history, most parents sing to their infants and toddlers daily. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2021, 376, 20210089.	1.8	14
7	Testing the role of symbols in preschool numeracy: An experimental computer-based intervention study. <i>PLoS ONE</i> , 2021, 16, e0259775.	1.1	4
8	Learning from multiple informants: Children's response to epistemic bases for consensus judgments. <i>Journal of Experimental Child Psychology</i> , 2020, 192, 104759.	0.7	6
9	Online Developmental Science to Foster Innovation, Access, and Impact. <i>Trends in Cognitive Sciences</i> , 2020, 24, 675-678.	4.0	53
10	Infants' sensitivity to shape changes in 2D visual forms. <i>Infancy</i> , 2020, 25, 618-639.	0.9	10
11	Origins of the concepts cause, cost, and goal in prereaching infants. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2019, 116, 17747-17752.	3.3	38
12	Language, gesture, and judgment: Children's paths to abstract geometry. <i>Journal of Experimental Child Psychology</i> , 2019, 177, 70-85.	0.7	12
13	Children use targets' facial appearance to guide and predict social behavior.. <i>Developmental Psychology</i> , 2019, 55, 1400-1413.	1.2	23
14	Shared musical knowledge in 11-month-old infants. <i>Developmental Science</i> , 2018, 21, e12542.	1.3	20
15	Places in the Brain: Bridging Layout and Object Geometry in Scene-Selective Cortex. <i>Cerebral Cortex</i> , 2018, 28, 2365-2374.	1.6	31
16	Human infants' understanding of social imitation: Inferences of affiliation from third party observations. <i>Cognition</i> , 2018, 170, 31-48.	1.1	61
17	The statistical shape of geometric reasoning. <i>Scientific Reports</i> , 2018, 8, 12906.	1.6	6
18	Third-Party Preferences for Imitators in Preverbal Infants. <i>Open Mind</i> , 2018, 2, 61-71.	0.6	23

#	ARTICLE	IF	CITATIONS
19	The aesthetic preference for symmetry dissociates from early-emerging attention to symmetry. <i>Scientific Reports</i> , 2018, 8, 6263.	1.6	22
20	At 4.5 but not 5.5 years, children favor kin when the stakes are moderately high. <i>PLoS ONE</i> , 2018, 13, e0202507.	1.1	5
21	From map reading to geometric intuitions.. <i>Developmental Psychology</i> , 2018, 54, 1304-1316.	1.2	11
22	Core Knowledge, Language, and Number. <i>Language Learning and Development</i> , 2017, 13, 147-170.	0.7	50
23	The cradle of social knowledge: Infants's reasoning about caregiving and affiliation. <i>Cognition</i> , 2017, 159, 102-116.	1.1	27
24	Six-month-old infants expect agents to minimize the cost of their actions. <i>Cognition</i> , 2017, 160, 35-42.	1.1	51
25	Cognitive science in the field: A preschool intervention durably enhances intuitive but not formal mathematics. <i>Science</i> , 2017, 357, 47-55.	6.0	66
26	Ten-month-old infants infer the value of goals from the costs of actions. <i>Science</i> , 2017, 358, 1038-1041.	6.0	111
27	Mind Games: Game Engines as an Architecture for Intuitive Physics. <i>Trends in Cognitive Sciences</i> , 2017, 21, 649-665.	4.0	112
28	Young Children's Use of Surface and Object Information in Drawings of Everyday Scenes. <i>Child Development</i> , 2017, 88, 1701-1715.	1.7	2
29	Mastery of the logic of natural numbers is not the result of mastery of counting: evidence from late counters. <i>Developmental Science</i> , 2017, 20, e12459.	1.3	15
30	Intelligent machines and human minds. <i>Behavioral and Brain Sciences</i> , 2017, 40, e277.	0.4	0
31	Children can predict actions from subtle preparatory movements, but not as well as adults. <i>Journal of Vision</i> , 2017, 17, 51.	0.1	0
32	Children's Expectations and Understanding of Kinship as a Social Category. <i>Frontiers in Psychology</i> , 2016, 7, 440.	1.1	22
33	Shared cultural knowledge: Effects of music on young children's social preferences. <i>Cognition</i> , 2016, 148, 106-116.	1.1	43
34	For 5-Month-Old Infants, Melodies Are Social. <i>Psychological Science</i> , 2016, 27, 486-501.	1.8	106
35	Non-symbolic division in childhood. <i>Journal of Experimental Child Psychology</i> , 2016, 142, 66-82.	0.7	23
36	Effects of Non-Symbolic Approximate Number Practice on Symbolic Numerical Abilities in Pakistani Children. <i>PLoS ONE</i> , 2016, 11, e0164436.	1.1	32

#	ARTICLE	IF	CITATIONS
37	Children's expectations about training the approximate number system. <i>British Journal of Developmental Psychology</i> , 2015, 33, 411-418.	0.9	11
38	Effects of early institutionalization on the development of emotion processing: a case for <i>relative</i> sparing?. <i>Developmental Science</i> , 2015, 18, 298-313.	1.3	24
39	Core geometry in perspective. <i>Developmental Science</i> , 2015, 18, 894-908.	1.3	10
40	Goal attributions and instrumental helping at 14 and 24 months of age. <i>Cognition</i> , 2015, 142, 44-59.	1.1	17
41	In the name of God: How children and adults judge agents who act for religious versus secular reasons. <i>Cognition</i> , 2015, 144, 134-149.	1.1	16
42	Inexperienced newborn chicks use geometry to spontaneously reorient to an artificial social partner. <i>Developmental Science</i> , 2015, 18, 972-978.	1.3	23
43	Core Knowledge and the Emergence of Symbols: The Case of Maps. <i>Journal of Cognition and Development</i> , 2015, 16, 81-96.	0.6	12
44	Differential representation of length and angle information across scene-selective cortex. <i>Journal of Vision</i> , 2015, 15, 519.	0.1	0
45	The Formation of Belief-Based Social Preferences. <i>Social Cognition</i> , 2014, 32, 22-47.	0.5	18
46	Representations of space, time, and number in neonates. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2014, 111, 4809-4813.	3.3	241
47	Dissociation between small and large numerosities in newborn infants. <i>Developmental Science</i> , 2014, 17, 11-22.	1.3	60
48	Reading Angles in Maps. <i>Child Development</i> , 2014, 85, 237-249.	1.7	11
49	Toward exact number: Young children use one-to-one correspondence to measure set identity but not numerical equality. <i>Cognitive Psychology</i> , 2014, 72, 27-53.	0.9	45
50	What do different beliefs tell us? An examination of factual, opinion-based, and religious beliefs. <i>Cognitive Development</i> , 2014, 30, 15-29.	0.7	31
51	Preverbal infants identify emotional reactions that are incongruent with goal outcomes. <i>Cognition</i> , 2014, 130, 204-216.	1.1	85
52	Brief non-symbolic, approximate number practice enhances subsequent exact symbolic arithmetic in children. <i>Cognition</i> , 2014, 131, 92-107.	1.1	223
53	The development of reasoning about beliefs: Fact, preference, and ideology. <i>Journal of Experimental Social Psychology</i> , 2013, 49, 559-565.	1.3	86
54	Preverbal infants expect members of social groups to act alike. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2013, 110, E3965-72.	3.3	165

#	ARTICLE	IF	CITATIONS
55	First-person action experience reveals sensitivity to action efficiency in prereaching infants. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2013, 110, 18728-18733.	3.3	79
56	Generating a lexicon without a language model: Do words for number count?. <i>Journal of Memory and Language</i> , 2013, 69, 496-505.	1.1	22
57	Navigation by environmental geometry: The use of zebrafish as a model. <i>Journal of Experimental Biology</i> , 2013, 216, 3693-9.	0.8	43
58	Two-year-old children interpret abstract, purely geometric maps. <i>Developmental Science</i> , 2013, 16, 365-376.	1.3	21
59	Non-symbolic halving in an Amazonian indigene group. <i>Developmental Science</i> , 2013, 16, 451-462.	1.3	26
60	What Exactly do Numbers Mean?. <i>Language Learning and Development</i> , 2013, 9, 105-129.	0.7	114
61	Melting Lizards and Crying Mailboxes: Children's Preferential Recall of Minimally Counterintuitive Concepts. <i>Cognitive Science</i> , 2013, 37, 1251-1289.	0.8	59
62	Patterns of implicit and explicit attitudes in children and adults: Tests in the domain of religion.. <i>Journal of Experimental Psychology: General</i> , 2013, 142, 864-879.	1.5	49
63	Two Randomized Trials Provide No Consistent Evidence for Nonmusical Cognitive Benefits of Brief Preschool Music Enrichment. <i>PLoS ONE</i> , 2013, 8, e82007.	1.1	87
64	Core foundations of abstract geometry. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2013, 110, 14191-14195.	3.3	57
65	Children's Use of Social Categories in Thinking About People and Social Relationships. <i>Journal of Cognition and Development</i> , 2013, 14, 35-62.	0.6	143
66	The Role of Forgetting in Undermining Good Intentions. <i>PLoS ONE</i> , 2013, 8, e79091.	1.1	5
67	Not All Continuous Dimensions Map Equally: Number-Brightness Mapping in Human Infants. <i>PLoS ONE</i> , 2013, 8, e81241.	1.1	18
68	Chicks, like children, spontaneously reorient by three-dimensional environmental geometry, not by image matching. <i>Biology Letters</i> , 2012, 8, 492-494.	1.0	54
69	Native Objects and Collaborators: Infants' Object Choices and Acts of Giving Reflect Favor for Native Over Foreign Speakers. <i>Journal of Cognition and Development</i> , 2012, 13, 67-81.	0.6	68
70	Language-based Social Preferences among Children in South Africa. <i>Language Learning and Development</i> , 2012, 8, 215-232.	0.7	39
71	Core systems of geometry in animal minds. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2012, 367, 2784-2793.	1.8	59
72	Spontaneous Reorientation Is Guided by Perceived Surface Distance, Not by Image Matching Or Comparison. <i>PLoS ONE</i> , 2012, 7, e51373.	1.1	24

#	ARTICLE	IF	CITATIONS
73	Spatiotemporal dynamics of processing nonsymbolic number: An event-related potential source localization study. <i>Human Brain Mapping</i> , 2012, 33, 2189-2203.	1.9	58
74	Navigation as a source of geometric knowledge: Young children's use of length, angle, distance, and direction in a reorientation task. <i>Cognition</i> , 2012, 123, 144-161.	1.1	84
75	Infants' Developing Understanding of Social Gaze. <i>Child Development</i> , 2012, 83, 486-496.	1.7	74
76	Cross-Dimensional Mapping of Number, Length and Brightness by Preschool Children. <i>PLoS ONE</i> , 2012, 7, e35530.	1.1	34
77	Kindergarten children's sensitivity to geometry in maps. <i>Developmental Science</i> , 2011, 14, 809-821.	1.3	30
78	Natural Number and Natural Geometry. , 2011, , 287-317.		38
79	Neural signatures of number processing in human infants: evidence for two core systems underlying numerical cognition. <i>Developmental Science</i> , 2011, 14, 360-371.	1.3	125
80	Race preferences in children: insights from South Africa. <i>Developmental Science</i> , 2011, 14, 1283-1291.	1.3	93
81	Spatial and numerical abilities without a complete natural language. <i>Neuropsychologia</i> , 2011, 49, 924-936.	0.7	25
82	The double-edged sword of pedagogy: Instruction limits spontaneous exploration and discovery. <i>Cognition</i> , 2011, 120, 322-330.	1.1	504
83	Do infants show social preferences for people differing in race?. <i>Cognition</i> , 2011, 119, 1-9.	1.1	172
84	Cognitive effects of language on human navigation. <i>Cognition</i> , 2011, 120, 186-201.	1.1	133
85	Young children reorient by computing layout geometry, not by matching images of the environment. <i>Psychonomic Bulletin and Review</i> , 2011, 18, 192-198.	1.4	70
86	Mirror-Image Sensitivity and Invariance in Object and Scene Processing Pathways. <i>Journal of Neuroscience</i> , 2011, 31, 11305-11312.	1.7	144
87	Quinian bootstrapping or Fodorian combination? Core and constructed knowledge of number. <i>Behavioral and Brain Sciences</i> , 2011, 34, 149-150.	0.4	13
88	Flexible intuitions of Euclidean geometry in an Amazonian indigene group. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2011, 108, 9782-9787.	3.3	75
89	Number without a language model. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2011, 108, 3163-3168.	3.3	161
90	Children's Responses to Group-Based Inequalities: Perpetuation and Rectification. <i>Social Cognition</i> , 2011, 29, 270-287.	0.5	92

#	ARTICLE	IF	CITATIONS
91	Geometry as a Universal Mental Construction. , 2011, , 319-332.		22
92	Social categories guide young children's preferences for novel objects. <i>Developmental Science</i> , 2010, 13, 599-610.	1.3	170
93	Two systems of spatial representation underlying navigation. <i>Experimental Brain Research</i> , 2010, 206, 179-188.	0.7	82
94	Non-symbolic arithmetic abilities and mathematics achievement in the first year of formal schooling. <i>Cognition</i> , 2010, 115, 394-406.	1.1	264
95	Core multiplication in childhood. <i>Cognition</i> , 2010, 116, 204-216.	1.1	88
96	A modular geometric mechanism for reorientation in children. <i>Cognitive Psychology</i> , 2010, 61, 152-176.	0.9	79
97	Beyond Core Knowledge: Natural Geometry. <i>Cognitive Science</i> , 2010, 34, 863-884.	0.8	164
98	Number-Space Mapping in Human Infants. <i>Psychological Science</i> , 2010, 21, 653-660.	1.8	247
99	Evidence from an emerging sign language reveals that language supports spatial cognition. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2010, 107, 12116-12120.	3.3	142
100	Social Information Guides Infants' Selection of Foods. <i>Journal of Cognition and Development</i> , 2009, 10, 1-17.	0.6	208
101	Accent Trumps Race in Guiding Children's Social Preferences. <i>Social Cognition</i> , 2009, 27, 623-634.	0.5	441
102	All Numbers Are Not Equal: An Electrophysiological Investigation of Small and Large Number Representations. <i>Journal of Cognitive Neuroscience</i> , 2009, 21, 1039-1053.	1.1	137
103	Newborn infants perceive abstract numbers. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2009, 106, 10382-10385.	3.3	625
104	Spontaneous mapping of number and space in adults and young children. <i>Cognition</i> , 2009, 110, 198-207.	1.1	182
105	Core knowledge and its limits: The domain of food. <i>Cognition</i> , 2009, 112, 120-140.	1.1	37
106	What can developmental and comparative cognitive neuroscience tell us about the adult human brain?. <i>Current Opinion in Neurobiology</i> , 2009, 19, 1-5.	2.0	79
107	Reaching and grasping a moving object in 6-, 8-, and 10-month-old infants: Laterality and performance. , 2009, 32, 137-146.		43
108	Occlusion Is Hard: Comparing Predictive Reaching for Visible and Hidden Objects in Infants and Adults. <i>Cognitive Science</i> , 2009, 33, 1483-1502.	0.8	27

#	ARTICLE	IF	CITATIONS
109	Young Children's Representations of Spatial and Functional Relations Between Objects. <i>Child Development</i> , 2009, 80, 1612-1627.	1.7	30
110	Innateness, Learning, and Rationality. <i>Child Development Perspectives</i> , 2009, 3, 96-98.	2.1	34
111	Children's multiplicative transformations of discrete and continuous quantities. <i>Journal of Experimental Child Psychology</i> , 2009, 103, 441-454.	0.7	49
112	Development of Sensitivity to Geometry in Visual Forms. <i>Human Evolution</i> , 2009, 23, 213-248.	2.0	41
113	Young children's spontaneous use of geometry in maps. <i>Developmental Science</i> , 2008, 11, F1-F7.	1.3	58
114	Children's use of geometry for reorientation. <i>Developmental Science</i> , 2008, 11, 743-749.	1.3	77
115	Foundations of cooperation in young children. <i>Cognition</i> , 2008, 108, 222-231.	1.1	464
116	Children's understanding of the relationship between addition and subtraction. <i>Cognition</i> , 2008, 107, 932-945.	1.1	37
117	Log or Linear? Distinct Intuitions of the Number Scale in Western and Amazonian Indigene Cultures. <i>Science</i> , 2008, 320, 1217-1220.	6.0	503
118	Exact Equality and Successor Function: Two Key Concepts on the Path towards Understanding Exact Numbers. <i>Philosophical Psychology</i> , 2008, 21, 491-505.	0.5	73
119	Judgments of the lucky across development and culture.. <i>Journal of Personality and Social Psychology</i> , 2008, 94, 757-776.	2.6	54
