ALAN F WILLNED

| #  | Article                                                                                                                                                                                   | IF   | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Terabit free-space data transmission employing orbital angular momentum multiplexing. Nature<br>Photonics, 2012, 6, 488-496.                                                              | 31.4 | 3,471     |
| 2  | Terabit-Scale Orbital Angular Momentum Mode Division Multiplexing in Fibers. Science, 2013, 340,<br>1545-1548.                                                                            | 12.6 | 2,330     |
| 3  | High-capacity millimetre-wave communications with orbital angular momentum multiplexing. Nature<br>Communications, 2014, 5, 4876.                                                         | 12.8 | 972       |
| 4  | Roadmap on structured light. Journal of Optics (United Kingdom), 2017, 19, 013001.                                                                                                        | 2.2  | 888       |
| 5  | All-Optical Signal Processing. Journal of Lightwave Technology, 2014, 32, 660-680.                                                                                                        | 4.6  | 464       |
| 6  | 100  Tbit/s free-space data link enabled by three-dimensional multiplexing of orbital angular momentum, polarization, and wavelength. Optics Letters, 2014, 39, 197.                      | 3.3  | 443       |
| 7  | 4 × 20  Gbit/s mode division multiplexing over free space using vector modes and a q-plate mode<br>(de)multiplexer. Optics Letters, 2015, 40, 1980.                                       | 3.3  | 372       |
| 8  | Atmospheric turbulence effects on the performance of a free space optical link employing orbital angular momentum multiplexing. Optics Letters, 2013, 38, 4062.                           | 3.3  | 233       |
| 9  | Mode division multiplexing using an orbital angular momentum mode sorter and MIMO-DSP over a graded-index few-mode optical fibre. Scientific Reports, 2015, 5, 14931.                     | 3.3  | 216       |
| 10 | Broadband SBS Slow Light in an Optical Fiber. Journal of Lightwave Technology, 2007, 25, 201-206.                                                                                         | 4.6  | 183       |
| 11 | Adaptive-optics-based simultaneous pre- and post-turbulence compensation of multiple orbital-angular-momentum beams in a bidirectional free-space optical link. Optica, 2014, 1, 376.     | 9.3  | 177       |
| 12 | Spectrally Efficient Direct-Detected OFDM Transmission Incorporating a Tunable Frequency Gap and an Iterative Detection Techniques. Journal of Lightwave Technology, 2009, 27, 5723-5735. | 4.6  | 176       |
| 13 | Performance metrics and design considerations for a free-space optical<br>orbital-angular-momentum–multiplexed communication link. Optica, 2015, 2, 357.                                  | 9.3  | 164       |
| 14 | Spectrally efficient direct-detected OFDM transmission employing an iterative estimation and cancellation technique. Optics Express, 2009, 17, 9099.                                      | 3.4  | 159       |
| 15 | Orbital Angular Momentum-based Space Division Multiplexing for High-capacity Underwater Optical<br>Communications. Scientific Reports, 2016, 6, 33306.                                    | 3.3  | 156       |
| 16 | Theoretical and Experimental Investigations of Direct-Detected RF-Tone-Assisted Optical OFDM Systems. Journal of Lightwave Technology, 2009, 27, 1332-1339.                               | 4.6  | 142       |
| 17 | Adaptive optics compensation of multiple orbital angular momentum beams propagating through emulated atmospheric turbulence. Optics Letters, 2014, 39, 2845.                              | 3.3  | 138       |
| 18 | Orbital angular momentum of light for communications. Applied Physics Reviews, 2021, 8, .                                                                                                 | 11.3 | 137       |

| #  | Article                                                                                                                                                                                                                                         | IF   | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Experimental characterization of a 400  Gbit/s orbital angular momentum multiplexed free-space<br>optical link over 120 m. Optics Letters, 2016, 41, 622.                                                                                       | 3.3  | 136       |
| 20 | Recent advances in high-capacity free-space optical and radio-frequency communications using orbital angular momentum multiplexing. Philosophical Transactions Series A, Mathematical, Physical, and Engineering Sciences, 2017, 375, 20150439. | 3.4  | 131       |
| 21 | Line-of-Sight Millimeter-Wave Communications Using Orbital Angular Momentum Multiplexing<br>Combined With Conventional Spatial Multiplexing. IEEE Transactions on Wireless Communications,<br>2017, 16, 3151-3161.                              | 9.2  | 130       |
| 22 | A Different Angle on Light Communications. Science, 2012, 337, 655-656.                                                                                                                                                                         | 12.6 | 126       |
| 23 | Broadband frequency translation through time refraction in an epsilon-near-zero material. Nature<br>Communications, 2020, 11, 2180.                                                                                                             | 12.8 | 121       |
| 24 | Crosstalk mitigation in a free-space orbital angular momentum multiplexed communication link using 4×4 MIMO equalization. Optics Letters, 2014, 39, 4360.                                                                                       | 3.3  | 116       |
| 25 | Phase correction for a distorted orbital angular momentum beam using a Zernike polynomials-based stochastic-parallel-gradient-descent algorithm. Optics Letters, 2015, 40, 1197.                                                                | 3.3  | 101       |
| 26 | Sorting Photons by Radial Quantum Number. Physical Review Letters, 2017, 119, 263602.                                                                                                                                                           | 7.8  | 97        |
| 27 | Experimental demonstration of a 200-Gbit/s free-space optical link by multiplexing Laguerre–Gaussian beams with different radial indices. Optics Letters, 2016, 41, 3447.                                                                       | 3.3  | 85        |
| 28 | Silicon-Based Microring Resonator Modulators for Intensity Modulation. IEEE Journal of Selected Topics in Quantum Electronics, 2010, 16, 149-158.                                                                                               | 2.9  | 84        |
| 29 | High-Capacity Free-Space Optical Communications Between a Ground Transmitter and a Ground<br>Receiver via a UAV Using Multiplexing of Multiple Orbital-Angular-Momentum Beams. Scientific<br>Reports, 2017, 7, 17427.                           | 3.3  | 81        |
| 30 | Fiber coupler for generating orbital angular momentum modes. Optics Letters, 2011, 36, 4269.                                                                                                                                                    | 3.3  | 77        |
| 31 | Atmospheric turbulence mitigation in an OAM-based MIMO free-space optical link using spatial diversity combined with MIMO equalization. Optics Letters, 2016, 41, 2406.                                                                         | 3.3  | 77        |
| 32 | Atmospheric turbulence compensation in orbital angular momentum communications: Advances and perspectives. Optics Communications, 2018, 408, 68-81.                                                                                             | 2.1  | 77        |
| 33 | All-Optical Signal Processing Techniques for Flexible Networks. Journal of Lightwave Technology, 2019, 37, 21-35.                                                                                                                               | 4.6  | 71        |
| 34 | Underwater optical communications using orbital angular momentum-based spatial division multiplexing. Optics Communications, 2018, 408, 21-25.                                                                                                  | 2.1  | 70        |
| 35 | Free-space optical communications using orbital-angular-momentum multiplexing combined with MIMO-based spatial multiplexing. Optics Letters, 2015, 40, 4210.                                                                                    | 3.3  | 69        |
| 36 | Optically Efficient Nonlinear Signal Processing. IEEE Journal of Selected Topics in Quantum Electronics, 2011, 17, 320-332.                                                                                                                     | 2.9  | 66        |

| #  | Article                                                                                                                                                                                                                          | IF                | CITATIONS |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-----------|
| 37 | Mode-Division-Multiplexing of Multiple Bessel-Gaussian Beams Carrying Orbital-Angular-Momentum<br>for Obstruction-Tolerant Free-Space Optical and Millimetre-Wave Communication Links. Scientific<br>Reports, 2016, 6, 22082.    | 3.3               | 63        |
| 38 | All-Optical Signal Processing for UltraHigh Speed Optical Systems and Networks. Journal of<br>Lightwave Technology, 2012, 30, 3760-3770.                                                                                         | 4.6               | 61        |
| 39 | Experimental demonstration of 20  Gbit/s data encoding and 2  ns channel hopping using orbita momentum modes. Optics Letters, 2015, 40, 5810.                                                                                    | al angular<br>3.3 | 59        |
| 40 | SBS-Based Fiber Optical Sensing Using Frequency-Domain Simultaneous Tone Interrogation. Journal of Lightwave Technology, 2011, 29, 1729-1735.                                                                                    | 4.6               | 58        |
| 41 | Efficient generation and multiplexing of optical orbital angular momentum modes in a ring fiber by using multiple coherent inputs. Optics Letters, 2012, 37, 3645.                                                               | 3.3               | 58        |
| 42 | 400-Gbit/s QPSK free-space optical communication link based on four-fold multiplexing of<br>Hermite–Gaussian or Laguerre–Gaussian modes by varying both modal indices. Optics Letters, 2018, 43,<br>3889.                        | 3.3               | 55        |
| 43 | Fiber-Based Slow-Light Technologies. Journal of Lightwave Technology, 2008, 26, 3752-3762.                                                                                                                                       | 4.6               | 54        |
| 44 | Fiber structure to convert a Gaussian beam to higher-order optical orbital angular momentum modes.<br>Optics Letters, 2012, 37, 3294.                                                                                            | 3.3               | 53        |
| 45 | N-dimentional multiplexing link with 1.036-Pbit/s transmission capacity and 112.6-bit/s/Hz spectral efficiency using OFDM-8QAM signals over 368 WDM pol-muxed 26 OAM modes. , 2014, , .                                          |                   | 53        |
| 46 | Perspectives on advances in high-capacity, free-space communications using multiplexing of orbital-angular-momentum beams. APL Photonics, 2021, 6, .                                                                             | 5.7               | 53        |
| 47 | 44-ns Continuously Tunable Dispersionless Optical Delay Element Using a PPLN Waveguide With<br>Two-Pump Configuration, DCF, and a Dispersion Compensator. IEEE Photonics Technology Letters,<br>2007, 19, 861-863.               | 2.5               | 51        |
| 48 | Communication with a twist. IEEE Spectrum, 2016, 53, 34-39.                                                                                                                                                                      | 0.7               | 48        |
| 49 | Independent and Simultaneous Monitoring of Chromatic and Polarization-Mode Dispersion in OOK<br>and DPSK Transmission. IEEE Photonics Technology Letters, 2007, 19, 3-5.                                                         | 2.5               | 46        |
| 50 | Turbulence compensation of an orbital angular momentum and polarization-multiplexed link using a data-carrying beacon on a separate wavelength. Optics Letters, 2015, 40, 2249.                                                  | 3.3               | 46        |
| 51 | Turbulence-resilient pilot-assisted self-coherent free-space optical communications using automatic optoelectronic mixing of many modes. Nature Photonics, 2021, 15, 743-750.                                                    | 31.4              | 45        |
| 52 | 160 Gb/s Time-Domain Channel Extraction/Insertion and All-Optical Logic Operations Exploiting a<br>Single PPLN Waveguide. Journal of Lightwave Technology, 2009, 27, 4221-4227.                                                  | 4.6               | 40        |
