#	ARTICLE	IF	CITATIONS
1	A new type of flexible CP12 protein in the marine diatom <i>Thalassiosira pseudonana</i> . <i>Cell Communication and Signaling</i> , 2021, 19, 38.	2.7	9
2	Flexibility of Oxidized and Reduced States of the Chloroplast Regulatory Protein CP12 in Isolation and in Cell Extracts. <i>Biomolecules</i> , 2021, 11, 701.	1.8	4
3	Orchestration of algal metabolism by protein disorder. <i>Archives of Biochemistry and Biophysics</i> , 2019, 672, 108070.	1.4	13
4	Cryptic Disorder Out of Disorder: Encounter between Conditionally Disordered CP12 and Glyceraldehyde-3-Phosphate Dehydrogenase. <i>Journal of Molecular Biology</i> , 2018, 430, 1218-1234.	2.0	19
5	Absence of residual structure in the intrinsically disordered regulatory protein CP12 in its reduced state. <i>Biochemical and Biophysical Research Communications</i> , 2016, 477, 20-26.	1.0	14
6	Saccharification of thermochemically pretreated cellulosic biomass using native and engineered cellulosomal enzyme systems. <i>Reaction Chemistry and Engineering</i> , 2016, 1, 616-628.	1.9	8
7	How Random are Intrinsically Disordered Proteins? A Small Angle Scattering Perspective. <i>Current Protein and Peptide Science</i> , 2012, 13, 55-75.	0.7	287
8	Small-Angle X-ray Scattering and Crystallography. <i>Methods in Enzymology</i> , 2012, 510, 183-210.	0.4	16
9	Understanding the structural ensembles of a highly extended disordered protein. <i>Molecular BioSystems</i> , 2012, 8, 308-319.	2.9	37
10	Synergy, Structure and Conformational Flexibility of Hybrid Cellulosomes Displaying Various Inter-cohesins Linkers. <i>Journal of Molecular Biology</i> , 2011, 405, 143-157.	2.0	33
11	Antitumoral activity of allosteric inhibitors of protein kinase CK2. <i>Oncotarget</i> , 2011, 2, 997-1010.	0.8	39
12	UV and X-ray structural studies of a 101-residue long Tat protein from a HIV-1 primary isolate and of its mutated, detoxified, vaccine candidate. <i>Proteins: Structure, Function and Bioinformatics</i> , 2010, 78, 1441-1456.	1.5	30
13	Crystal structure at 1.45-Å resolution of the major allergen endo-1,3-glucanase of banana as a molecular basis for the latex-fruit syndrome. <i>Proteins: Structure, Function and Bioinformatics</i> , 2006, 63, 235-242.	1.5	40
14	An Archaeal Peptidase Assembles into Two Different Quaternary Structures. <i>Journal of Biological Chemistry</i> , 2006, 281, 36327-36337.	1.6	35
15	Structural Basis of Cellulosome Efficiency Explored by Small Angle X-ray Scattering. <i>Journal of Biological Chemistry</i> , 2005, 280, 38562-38568.	1.6	95
16	The intrinsically disordered C-terminal domain of the measles virus nucleoprotein interacts with the C-terminal domain of the phosphoprotein via two distinct sites and remains predominantly unfolded. <i>Protein Science</i> , 2005, 14, 1975-1992.	3.1	139
17	Assessing protein disorder and induced folding. <i>Proteins: Structure, Function and Bioinformatics</i> , 2005, 62, 24-45.	1.5	388
18	Activation of the LicT Transcriptional Antiterminator Involves a Domain Swing/Lock Mechanism Provoking Massive Structural Changes. <i>Journal of Biological Chemistry</i> , 2005, 280, 14780-14789.	1.6	64

#	ARTICLE	IF	CITATIONS
19	Structure of a Full Length Psychrophilic Cellulase from <i>Pseudoalteromonas haloplanktis</i> revealed by X-ray Diffraction and Small Angle X-ray Scattering. <i>Journal of Molecular Biology</i> , 2005, 348, 1211-1224.	2.0	97
20	Protein Disorder: Conformational Distribution of the Flexible Linker in a Chimeric Double Cellulase. <i>Biophysical Journal</i> , 2005, 88, 2823-2832.	0.2	80
21	Structural Insights into the Mechanism of Formation of Cellulosomes Probed by Small Angle X-ray Scattering. <i>Journal of Biological Chemistry</i> , 2004, 279, 55985-55994.	1.6	48
22	The C-terminal domain of measles virus nucleoprotein belongs to the class of intrinsically disordered proteins that fold upon binding to their physiological partner. <i>Virus Research</i> , 2004, 99, 157-167.	1.1	156
23	Quaternary structure of alpha-crustacyanin from lobster as seen by small-angle X-ray scattering. <i>FEBS Letters</i> , 2003, 544, 189-193.	1.3	19
24	The C-terminal Domain of the Measles Virus Nucleoprotein Is Intrinsically Disordered and Folds upon Binding to the C-terminal Moiety of the Phosphoprotein. <i>Journal of Biological Chemistry</i> , 2003, 278, 18638-18648.	1.6	260
