citing authors

#	ARTICLE	IF	CITATIONS
1	A history of TOPMODEL. <i>Hydrology and Earth System Sciences</i> , 2021, 25, 527-549.	4.9	54
2	The evolving perceptual model of streamflow generation at the Panola Mountain Research Watershed. <i>Hydrological Processes</i> , 2021, 35, e14127.	2.6	12
3	The Maimai experimental catchment database: Forty years of process-based research on steep, wet hillslopes. <i>Hydrological Processes</i> , 2021, 35, e14112.	2.6	4
4	Assessing the hydrological and geomorphic behaviour of a landscape evolution model within a limits of acceptability uncertainty analysis framework. <i>Earth Surface Processes and Landforms</i> , 2021, 46, 1981-2003.	2.5	6
5	Incorporating Uncertainty Into Multiscale Parameter Regionalization to Evaluate the Performance of Nationally Consistent Parameter Fields for a Hydrological Model. <i>Water Resources Research</i> , 2021, 57, e2020WR028393.	4.2	9
6	The Abuse of Popular Performance Metrics in Hydrologic Modeling. <i>Water Resources Research</i> , 2021, 57, e2020WR029001.	4.2	76
7	Towards more realistic runoff projections by removing limits on simulated soil moisture deficit. <i>Journal of Hydrology</i> , 2021, 600, 126505.	5.4	8
8	Developing observational methods to drive future hydrological science: Can we make a start as a community?. <i>Hydrological Processes</i> , 2020, 34, 868-873.	2.6	34
9	A Brief Analysis of Conceptual Model Structure Uncertainty Using 36 Models and 559 Catchments. <i>Water Resources Research</i> , 2020, 56, e2019WR025975.	4.2	72
10	What about reservoirs? Questioning anthropogenic and climatic interferences on water availability. <i>Hydrological Processes</i> , 2020, 34, 5441-5455.	2.6	15
11	BVLOS UAS Operations in Highly-Turbulent Volcanic Plumes. <i>Frontiers in Robotics and AI</i> , 2020, 7, 549716.	3.2	10
12	The Spatial Dynamics of Droughts and Water Scarcity in England and Wales. <i>Water Resources Research</i> , 2020, 56, e2020WR027187.	4.2	31
13	The impact of different rainfall products on landscape modelling simulations. <i>Earth Surface Processes and Landforms</i> , 2020, 45, 2512-2523.	2.5	8
14	Drought and climate change impacts on cooling water shortages and electricity prices in Great Britain. <i>Nature Communications</i> , 2020, 11, 2239.	12.8	53
15	CAMELS-GB: hydrometeorological time series and landscape attributes for 671 catchments in Great Britain. <i>Earth System Science Data</i> , 2020, 12, 2459-2483.	9.9	87
16	DECIPHeR v1: Dynamic fluxEs and Connectlivity for Predictions of HydRology. <i>Geoscientific Model Development</i> , 2019, 12, 2285-2306.	3.6	51
17	Modular Assessment of Rainfall-Runoff Models Toolbox (MARRMoT) v1.2: an open-source, extendable framework providing implementations of 46 conceptual hydrologic models as continuous state-space formulations. <i>Geoscientific Model Development</i> , 2019, 12, 2463-2480.	3.6	74
18	Remote sensing and identification of volcanic plumes using fixed-wing UAVs over Volc�n de Fuego, Guatemala. <i>Journal of Field Robotics</i> , 2019, 36, 1192-1211.	6.0	22

#	ARTICLE	IF	CITATIONS
19	Global bimodal precipitation seasonality: A systematic overview. <i>International Journal of Climatology</i> , 2019, 39, 558-567.	3.5	31
20	Benchmarking the predictive capability of hydrological models for river flow and flood peak predictions across over 1000 catchments in Great Britain. <i>Hydrology and Earth System Sciences</i> , 2019, 23, 4011-4032.	4.9	63
21	Technical note: Inherent benchmark or not? Comparing Nash–Sutcliffe and Kling–Gupta efficiency scores. <i>Hydrology and Earth System Sciences</i> , 2019, 23, 4323-4331.	4.9	582
22	Determining the sources of nutrient flux to water in headwater catchments: Examining the speciation balance to inform the targeting of mitigation measures. <i>Science of the Total Environment</i> , 2019, 648, 1179-1200.	8.0	31
23	Improving estuary models by reducing uncertainties associated with river flows. <i>Estuarine, Coastal and Shelf Science</i> , 2018, 207, 63-73.	2.1	15
24	Epistemic uncertainties and natural hazard risk assessment – Part 1: A review of different natural hazard areas. <i>Natural Hazards and Earth System Sciences</i> , 2018, 18, 2741-2768.	3.6	45
25	Simulating Runoff Under Changing Climatic Conditions: A Framework for Model Improvement. <i>Water Resources Research</i> , 2018, 54, 9812-9832.	4.2	58
26	Constraining Conceptual Hydrological Models With Multiple Information Sources. <i>Water Resources Research</i> , 2018, 54, 8332-8362.	4.2	85
27	A Quantitative Hydrological Climate Classification Evaluated With Independent Streamflow Data. <i>Water Resources Research</i> , 2018, 54, 5088-5109.	4.2	100
28	A large set of potential past, present and future hydro-meteorological time series for the UK. <i>Hydrology and Earth System Sciences</i> , 2018, 22, 611-634.	4.9	54
29	Process-based modelling to evaluate simulated groundwater levels and frequencies in a chalk catchment in south-western England. <i>Natural Hazards and Earth System Sciences</i> , 2018, 18, 445-461.	3.6	22
30	A rule based quality control method for hourly rainfall data and a 1 km resolution gridded hourly rainfall dataset for Great Britain: CEH-GEAR1hr. <i>Journal of Hydrology</i> , 2018, 564, 930-943.	5.4	58
31	Effects of variability in probable maximum precipitation patterns on flood losses. <i>Hydrology and Earth System Sciences</i> , 2018, 22, 2759-2773.	4.9	24
32	A Comparison of Methods for Streamflow Uncertainty Estimation. <i>Water Resources Research</i> , 2018, 54, 7149-7176.	4.2	108
33	Quantifying local rainfall dynamics and uncertain boundary conditions into a nested regional–local flood modeling system. <i>Water Resources Research</i> , 2017, 53, 2770-2785.	4.2	51
34	Reply to comment by Melsen et al. on ‘‘Most computational hydrology is not reproducible, so is it really science?’’ <i>Water Resources Research</i> , 2017, 53, 2570-2571.	4.2	2
35	Reply to comment by Azeel on ‘‘Most computational hydrology is not reproducible, so is it really science?’’ <i>Water Resources Research</i> , 2017, 53, 2575-2576.	4.2	1
36	The potential benefits of on-farm mitigation scenarios for reducing multiple pollutant loadings in prioritised agri-environment areas across England. <i>Environmental Science and Policy</i> , 2017, 73, 100-114.	4.9	21

#	ARTICLE	IF	CITATIONS
37	Major agricultural changes required to mitigate phosphorus losses under climate change. <i>Nature Communications</i> , 2017, 8, 161.	12.8	121
38	Prediction of storm transfers and annual loads with data-based mechanistic models using high-frequency data. <i>Hydrology and Earth System Sciences</i> , 2017, 21, 6425-6444.	4.9	9
39	Atmospheric Sampling on Ascension Island Using Multirotor UAVs. <i>Sensors</i> , 2017, 17, 1189.	3.8	29
40	Hydrological controls on DOC:â€”nitrate resource stoichiometry in a lowland, agricultural catchment, southern UK. <i>Hydrology and Earth System Sciences</i> , 2017, 21, 4785-4802.	4.9	25
41	Consistency assessment of rating curve data in various locations using Bidirectional Reach (BReach). <i>Hydrology and Earth System Sciences</i> , 2017, 21, 5315-5337.	4.9	1
42	Technical Note: Testing an improved index for analysing storm dischargeâ€”concentration hysteresis. <i>Hydrology and Earth System Sciences</i> , 2016, 20, 625-632.	4.9	108
43	The evolution of root-zone moisture capacities after deforestation: a step towards hydrological predictions under change?. <i>Hydrology and Earth System Sciences</i> , 2016, 20, 4775-4799.	4.9	61
44	Methane mole fraction and $\delta^{13}C$ above and below the trade wind inversion at Ascension Island in air sampled by aerial robotics. <i>Geophysical Research Letters</i> , 2016, 43, 11,893.	4.0	14
45	Quantifying the importance of spatial resolution and other factors through global sensitivity analysis of a flood inundation model. <i>Water Resources Research</i> , 2016, 52, 9146-9163.	4.2	92
46	Most computational hydrology is not reproducible, so is it really science?. <i>Water Resources Research</i> , 2016, 52, 7548-7555.	4.2	119
47	When does spatial resolution become spurious in probabilistic flood inundation predictions?. <i>Hydrological Processes</i> , 2016, 30, 2014-2032.	2.6	94
48	Uncertainty in hydrological signatures for gauged and ungauged catchments. <i>Water Resources Research</i> , 2016, 52, 1847-1865.	4.2	104
49	Improving the theoretical underpinnings of process-based hydrologic models. <i>Water Resources Research</i> , 2016, 52, 2350-2365.	4.2	80
50	Using hysteresis analysis of high-resolution water quality monitoring data, including uncertainty, to infer controls on nutrient and sediment transfer in catchments. <i>Science of the Total Environment</i> , 2016, 543, 388-404.	8.0	221
51	Discharge and nutrient uncertainty: implications for nutrient flux estimation in small streams. <i>Hydrological Processes</i> , 2016, 30, 135-152.	2.6	48
52	Sensitivity analysis of environmental models: A systematic review with practical workflow. <i>Environmental Modelling and Software</i> , 2016, 79, 214-232.	4.5	926
53	A novel framework for discharge uncertainty quantification applied to 500 UK gauging stations. <i>Water Resources Research</i> , 2015, 51, 5531-5546.	4.2	159
54	A high-resolution global flood hazard model. <i>Water Resources Research</i> , 2015, 51, 7358-7381.	4.2	353

#	ARTICLE	IF	CITATIONS
55	Sensitivity of a hydraulic model to channel erosion uncertainty during extreme flooding. <i>Hydrological Processes</i> , 2015, 29, 261-279.	2.6	26
56	Factors affecting the spatial pattern of bedrock groundwater recharge at the hillslope scale. <i>Hydrological Processes</i> , 2015, 29, 4594-4610.	2.6	40
57	Virtual laboratories: new opportunities for collaborative water science. <i>Hydrology and Earth System Sciences</i> , 2015, 19, 2101-2117.	4.9	63
58	A unified approach for process-based hydrologic modeling: 2. Model implementation and case studies. <i>Water Resources Research</i> , 2015, 51, 2515-2542.	4.2	173
59	Dynamic TOPMODEL: A new implementation in R and its sensitivity to time and space steps. <i>Environmental Modelling and Software</i> , 2015, 72, 155-172.	4.5	53
60	Efficient incorporation of channel cross-section geometry uncertainty into regional and global scale flood inundation models. <i>Journal of Hydrology</i> , 2015, 529, 169-183.	5.4	76
61	A unified approach for process-based hydrologic modeling: 1. Modeling concept. <i>Water Resources Research</i> , 2015, 51, 2498-2514.	4.2	354
62	A geospatial framework to support integrated biogeochemical modelling in the United Kingdom. <i>Environmental Modelling and Software</i> , 2015, 68, 219-232.	4.5	26
63	Satellite-supported flood forecasting in river networks: A real case study. <i>Journal of Hydrology</i> , 2015, 523, 706-724.	5.4	88
64	Spotting East African Mammals in Open Savannah from Space. <i>PLoS ONE</i> , 2014, 9, e115989.	2.5	52
65	High-frequency monitoring of nitrogen and phosphorus response in three rural catchments to the end of the 2011-2012 drought in England. <i>Hydrology and Earth System Sciences</i> , 2014, 18, 3429-3448.	4.9	103
66	The impact of uncertain precipitation data on insurance loss estimates using a flood catastrophe model. <i>Hydrology and Earth System Sciences</i> , 2014, 18, 2305-2324.	4.9	48
67	Catchment similarity concepts for understanding dynamic biogeochemical behaviour of river basins. <i>Hydrological Processes</i> , 2014, 28, 1554-1560.	2.6	14
68	The Impact of Scale on Probabilistic Flood Inundation Maps Using a 2D Hydraulic Model with Uncertain Boundary Conditions. , 2014, , .		5
69	Recent climatic trends and linkages to river discharge in Central Vietnam. <i>Hydrological Processes</i> , 2014, 28, 1587-1601.	2.6	24
70	Methods for detecting change in hydrochemical time series in response to targeted pollutant mitigation in river catchments. <i>Journal of Hydrology</i> , 2014, 514, 297-312.	5.4	49
71	Struggling with Epistemic Uncertainties in Environmental Modelling of Natural Hazards. , 2014, , .		2
72	Comparing ensemble projections of flooding against flood estimation by continuous simulation. <i>Journal of Hydrology</i> , 2014, 511, 205-219.	5.4	32

#	ARTICLE	IF	CITATIONS
73	Catchment properties, function, and conceptual model representation: is there a correspondence?. Hydrological Processes, 2014, 28, 2451-2467.	2.6	135
74	Diagnostic evaluation of multiple hypotheses of hydrological behaviour in a limits-of-acceptability framework for 24 UK catchments. Hydrological Processes, 2014, 28, 6135-6150.	2.6	71
75	Investigating the application of climate models in flood projection across the UK. Hydrological Processes, 2014, 28, 2810-2823.	2.6	24
76	Process consistency in models: The importance of system signatures, expert knowledge, and process complexity. Water Resources Research, 2014, 50, 7445-7469.	4.2	170
77	A decade of Predictions in Ungauged Basins (PUB)â€”a review. Hydrological Sciences Journal, 2013, 58, 1198-1255.	2.6	821
78	Modelling climate impact on floods with ensemble climate projections. Quarterly Journal of the Royal Meteorological Society, 2013, 139, 282-297.	2.7	92
79	Improving the stability of a simple formulation of the shallow water equations for 2D flood modeling. Water Resources Research, 2012, 48, .	4.2	127
80	Comparing empirical models for sediment and phosphorus transfer from soils to water at field and catchment scale under data uncertainty. European Journal of Soil Science, 2012, 63, 211-223.	3.9	23
81	Comment on â€œPursuing the method of multiple working hypotheses for hydrological modelingâ€”by P. Clark et al.. Water Resources Research, 2012, 48, .	4.2	53
82	Conditioning model output statistics of regional climate model precipitation on circulation patterns. Nonlinear Processes in Geophysics, 2012, 19, 623-633.	1.3	61
83	Benchmarking observational uncertainties for hydrology: rainfall, river discharge and water quality. Hydrological Processes, 2012, 26, 4078-4111.	2.6	345
84	Scaling up the phosphorus signal from soil hillslopes to headwater catchments. Freshwater Biology, 2012, 57, 7-25.	2.4	58
85	A novel application of natural fluorescence to understand the sources and transport pathways of pollutants from livestock farming in small headwater catchments. Science of the Total Environment, 2012, 417-418, 169-182.	8.0	32
86	The impact of uncertainty in satellite data on the assessment of flood inundation models. Journal of Hydrology, 2012, 414-415, 162-173.	5.4	77
87	Processes influencing model-data mismatch in drought-stressed, fire-disturbed eddy flux sites. Journal of Geophysical Research, 2011, 116, .	3.3	20
88	Calibration of hydrological models using flow-duration curves. Hydrology and Earth System Sciences, 2011, 15, 2205-2227.	4.9	203
89	Impacts of uncertain river flow data on rainfallâ€”runoff model calibration and discharge predictions. Hydrological Processes, 2010, 24, 1270-1284.	2.6	136
90	Ensemble evaluation of hydrological model hypotheses. Water Resources Research, 2010, 46, .	4.2	83

#	ARTICLE	IF	CITATIONS
91	Flood-plain mapping: a critical discussion of deterministic and probabilistic approaches. <i>Hydrological Sciences Journal</i> , 2010, 55, 364-376.	2.6	213
92	Assessing catchment-scale erosion and yields of suspended solids from improved temperate grassland. <i>Journal of Environmental Monitoring</i> , 2010, 12, 731.	2.1	63
93	Assessment of projected changes in upland environments using simple climatic indices. <i>Climate Research</i> , 2010, 45, 87-104.	1.1	7
94	Diffuse Phosphorus Models in the United States and Europe: Their Usages, Scales, and Uncertainties. <i>Journal of Environmental Quality</i> , 2009, 38, 1956-1967.	2.0	80
95	Towards a limits of acceptability approach to the calibration of hydrological models: Extending observation error. <i>Journal of Hydrology</i> , 2009, 367, 93-103.	5.4	137
96	Multiple sources of predictive uncertainty in modeled estimates of net ecosystem CO <sub>2</sub> exchange. <i>Ecological Modelling</i> , 2009, 220, 3259-3270.	2.5	49
97	Consistency between hydrological models and field observations: linking processes at the hillslope scale to hydrological responses at the watershed scale. <i>Hydrological Processes</i> , 2009, 23, 311-319.	2.6	128
98	Detecting the effects of spatial variability of rainfall on hydrological modelling within an uncertainty analysis framework. <i>Hydrological Processes</i> , 2009, 23, 1988-2003.	2.6	59
99	Science versus politics: truth and uncertainty in predictive modelling. <i>Hydrological Processes</i> , 2009, 23, 2549-2554.	2.6	28
100	Tracking the uncertainty in flood alerts driven by grand ensemble weather predictions. <i>Meteorological Applications</i> , 2009, 16, 91-101.	2.1	109
101	Uncertainty assessment of a process-based integrated catchment model of phosphorus. <i>Stochastic Environmental Research and Risk Assessment</i> , 2009, 23, 991-1010.	4.0	86
102	Uncertainties in Data and Models to Describe Event Dynamics of Agricultural Sediment and Phosphorus Transfer. <i>Journal of Environmental Quality</i> , 2009, 38, 1137-1148.	2.0	75
103	The usability of 250 m resolution data from the UK Meteorological Office Unified Model as input data for a hydrological model. <i>Meteorological Applications</i> , 2008, 15, 207-217.	2.1	4
104	Conceptualization in catchment modelling: simply learning?. <i>Hydrological Processes</i> , 2008, 22, 2389-2393.	2.6	65
105	So just why would a modeller choose to be incoherent?. <i>Journal of Hydrology</i> , 2008, 354, 15-32.	5.4	221
106	Rethinking the Contribution of Drained and Undrained Grasslands to Sediment-Related Water Quality Problems. <i>Journal of Environmental Quality</i> , 2008, 37, 906-914.	2.0	62
107	Comment on "Hydrological forecasting uncertainty assessment: Incoherence of the GLUE methodology" by Pietro Mantovan and Ezio Todini. <i>Journal of Hydrology</i> , 2007, 338, 315-318.	5.4	86
108	Modelling the chloride signal at Plynlimon, Wales, using a modified dynamic TOPMODEL incorporating conservative chemical mixing (with uncertainty). <i>Hydrological Processes</i> , 2007, 21, 292-307.	2.6	89

#	ARTICLE	IF	CITATIONS
109	Processes affecting transfer of sediment and colloids, with associated phosphorus, from intensively farmed grasslands: a critical note on modelling of phosphorus transfers. <i>Hydrological Processes</i> , 2007, 21, 557-562.	2.6	22
110	Processes affecting transfer of sediment and colloids, with associated phosphorus, from intensively farmed grasslands: an overview of key issues. <i>Hydrological Processes</i> , 2006, 20, 4407-4413.	2.6	73
111	Spatial Variability of Soil Phosphorus in Relation to the Topographic Index and Critical Source Areas. <i>Journal of Environmental Quality</i> , 2005, 34, 2263-2277.	2.0	104
112	Constraining dynamic TOPMODEL responses for imprecise water table information using fuzzy rule based performance measures. <i>Journal of Hydrology</i> , 2004, 291, 254-277.	5.4	158
113	Title is missing!. <i>Water, Air, and Soil Pollution</i> , 2003, 142, 71-94.	2.4	24
114	Modelling hydrologic responses in a small forested catchment (Panola Mountain, Georgia, USA): a comparison of the original and a new dynamic TOPMODEL. <i>Hydrological Processes</i> , 2003, 17, 345-362.	2.6	50
115	The Geochemical Evolution of Riparian Ground Water in a Forested Piedmont Catchment. <i>Ground Water</i> , 2003, 41, 913-925.	1.3	88
116	Hydrological Dynamics of the Panola Mountain Research Watershed, Georgia. <i>Ground Water</i> , 2003, 41, 973-988.	1.3	54
117	Multivariate seasonal period model rejection within the generalised likelihood uncertainty estimation procedure. <i>Water Science and Application</i> , 2003, , 69-87.	0.3	55
118	The role of bedrock topography on subsurface storm flow. <i>Water Resources Research</i> , 2002, 38, 5-1-5-16.	4.2	322
119	Equifinality, data assimilation, and uncertainty estimation in mechanistic modelling of complex environmental systems using the GLUE methodology. <i>Journal of Hydrology</i> , 2001, 249, 11-29.	5.4	1,716
120	Stochastic capture zone delineation within the generalized likelihood uncertainty estimation methodology: Conditioning on head observations. <i>Water Resources Research</i> , 2001, 37, 625-638.	4.2	83
121	Quantifying contributions to storm runoff through end-member mixing analysis and hydrologic measurements at the Panola Mountain Research Watershed (Georgia, USA). <i>Hydrological Processes</i> , 2001, 15, 1903-1924.	2.6	299
122	A dynamic TOPMODEL. <i>Hydrological Processes</i> , 2001, 15, 1993-2011.	2.6	289
123	Equifinality and uncertainty in physically based soil erosion models: application of the GLUE methodology to WEPP-the Water Erosion Prediction Project-for sites in the UK and USA. <i>Earth Surface Processes and Landforms</i> , 2000, 25, 825-845.	2.5	160
124	Base cation concentrations in subsurface flow from a forested hillslope: The role of flushing frequency. <i>Water Resources Research</i> , 1998, 34, 3535-3544.	4.2	100
125	Modelling the hydrological response of mediterranean catchments, Prades, Catalonia. The use of distributed models as aids to hypothesis formulation. <i>Hydrological Processes</i> , 1997, 11, 1287-1306.	2.6	76
126	Hydrological processesâ€™ Letters. Topographic controls on subsurface storm flow at the hillslope scale for two hydrologically distinct small catchmetns. <i>Hydrological Processes</i> , 1997, 11, 1347-1352.	2.6	125

#	ARTICLE	IF	CITATIONS
127	Hydrological processes Letters. Topographic controls on subsurface storm flow at the hillslope scale for two hydrologically distinct small catchments. <i>Hydrological Processes</i> , 1997, 11, 1347-1352.	2.6	1
128	Application of a Generalized TOPMODEL to the Small Ringelbach Catchment, Vosges, France. <i>Water Resources Research</i> , 1996, 32, 2147-2159.	4.2	77
129	Toward a Generalization of the TOPMODEL Concepts: Topographic Indices of Hydrological Similarity. <i>Water Resources Research</i> , 1996, 32, 2135-2145.	4.2	261
130	Bayesian Estimation of Uncertainty in Runoff Prediction and the Value of Data: An Application of the GLUE Approach. <i>Water Resources Research</i> , 1996, 32, 2161-2173.	4.2	658
131	New method developed for studying flow on hillslopes. <i>Eos</i> , 1996, 77, 465-472.	0.1	90
