|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Kinks and realistic impurity models in $\tilde{t}4$ -theory. International Journal of Modern Physics B, 2022, 36, .                                                                                                     | 2.0  | 2         |
| 2  | Coexisting Charge-Ordered States with Distinct Driving Mechanisms in Monolayer VSe <sub>2</sub> . ACS Nano, 2022, 16, 783-791.                                                                                          | 14.6 | 11        |
| 3  | Topology and broken Hermiticity. Nature Physics, 2021, 17, 9-13.                                                                                                                                                        | 16.7 | 38        |
| 4  | Investigation of the non-equilibrium state of strongly correlated materials by complementary ultrafast spectroscopy techniques. New Journal of Physics, 2021, 23, 033025.                                               | 2.9  | 7         |
| 5  | Synthetic gravitational horizons in low-dimensional quantum matter. Physical Review Research, 2021, 3, .                                                                                                                | 3.6  | 13        |
| 6  | Topological states between inversion symmetric atomic insulators. SciPost Physics, 2021, 10, .                                                                                                                          | 4.9  | 1         |
| 7  | Chalcogenic orbital density waves in the weak- and strong-coupling limit. Physical Review B, 2021, 103, .                                                                                                               | 3.2  | 2         |
| 8  | Emergence of oscillons in kink-impurity interactions. Journal of Physics A: Mathematical and Theoretical, 2021, 54, 315701.                                                                                             | 2.1  | 2         |
| 9  | Signatures of the charge density wave collective mode in the infrared optical response of VSe <sub>2</sub> . Physical Review B, 2021, 104, .                                                                            | 3.2  | 2         |
| 10 | Multiband charge density wave exposed in a transition metal dichalcogenide. Nature Communications, 2021, 12, 6037.                                                                                                      | 12.8 | 20        |
| 11 | Topological invariants of rotationally symmetric crystals. Physical Review B, 2021, 104, .                                                                                                                              | 3.2  | 0         |
| 12 | Inconsistency of linear dynamics and Born's rule. Physical Review A, 2021, 104, .                                                                                                                                       | 2.5  | 7         |
| 13 | Engineering spectral properties of non-interacting lattice Hamiltonians. SciPost Physics, 2021, 11, .                                                                                                                   | 4.9  | 4         |
| 14 | Observation of non-Hermitian topology and its bulkâ€“edge correspondence in an active mechanical metamaterial. Proceedings of the National Academy of Sciences of the United States of America, 2020, 117, 29561-29568. | 7.1  | 294       |
| 15 | Visualizing topological transport. American Journal of Physics, 2020, 88, 876-882.                                                                                                                                      | 0.7  | 0         |
| 16 | Stability and absence of a tower of states in ferrimagnets. Physical Review Research, 2020, 2, .                                                                                                                        | 3.6  | 1         |
| 17 | Charge order from structured coupling in VSe\$_2\$. SciPost Physics, 2020, 9, .                                                                                                                                         | 4.9  | 11        |
| 18 | Topology in time-reversal symmetric crystals. Physical Review B, 2019, 100, .                                                                                                                                           | 3.2  | 13        |

| #  | ARTICLE                                                                                                                                                                                      | IF   | CITATIONS |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Rosenkranz, Osborn, and Van Wezel Reply:. Physical Review Letters, 2019, 122, 229702.                                                                                                        | 7.8  | 3         |
| 20 | Charge-density-wave in 1T-TiSe <sub>2</sub> : exciton-phonon separation by femtosecond valence band dynamics. EPJ Web of Conferences, 2019, 205, 04008.                                      | 0.3  | 0         |
| 21 | Visualizing the connection between edge states and the mobility edge in adiabatic and nonadiabatic topological charge transport. Physical Review B, 2019, 99, .                              | 3.2  | 2         |
| 22 | Excitonic and lattice contributions to the charge density wave in $\text{e} \times \text{H}$ revealed by a phonon bottleneck. Physical Review Research, 2019, 1, .                           | 3.6  | 39        |
| 23 | Elemental chalcogens as a minimal model for combined charge and orbital order. Physical Review B, 2018, 97, .                                                                                | 3.2  | 9         |
| 24 | Atomic-scale strain manipulation of a charge density wave. Proceedings of the National Academy of Sciences of the United States of America, 2018, 115, 6986-6990.                            | 7.1  | 47        |
| 25 | Electronic structure of the candidate 2D Dirac semimetal SrMnSb <sub>2</sub> : a combined experimental and theoretical study. SciPost Physics, 2018, 4, .                                    | 4.9  | 28        |
| 26 | The simple-cubic structure of elemental Polonium and its relation to combined charge and orbital order in other elemental chalcogens. SciPost Physics, 2018, 4, .                            | 4.9  | 7         |
| 27 | Orbital selectivity causing anisotropy and particle-hole asymmetry in the charge density wave gap of $\text{H}_3\text{Sb}_2$ . Physical Review B, 2017, 96, .                                | 3.2  | 18        |
| 28 | Signatures of exciton condensation in a transition metal dichalcogenide. Science, 2017, 358, 1314-1317.                                                                                      | 12.6 | 307       |
| 29 | Topological Classification of Crystalline Insulators through Band Structure Combinatorics. Physical Review X, 2017, 7, .                                                                     | 8.9  | 437       |
| 30 | Superconductivity and hybrid soft modes in $\text{Ti}_{3}\text{Se}_2$ . Physical Review B, 2016, 94, .                                                                                       | 3.2  | 216       |
| 31 | Charge order in $\text{NbSe}_3$ . Physical Review B, 2016, 94, .                                                                                                                             | 3.2  | 31        |
| 32 | Optical gyrotropy and the nonlocal Hall effect in chiral charge-ordered $\text{TiSe}_2$ . Physical Review B, 2015, 92, .                                                                     | 3.2  | 99        |
| 33 | Charge ordering geometries in uniaxially strained $\text{NbSe}_3$ . Physical Review B, 2015, 92, .                                                                                           | 3.2  | 102       |
| 34 | One-Dimensional Quasicrystals from Incommensurate Charge Order. Physical Review Letters, 2015, 115, 236401.                                                                                  | 7.8  | 7         |
| 35 | An instability of unitary quantum dynamics. Journal of Physics: Conference Series, 2015, 626, 012012.                                                                                        | 0.4  | 1         |
| 36 | Reply to Zayed: Interplay of magnetism and structure in the Shastry-Sutherland model. Proceedings of the National Academy of Sciences of the United States of America, 2015, 112, E383-E384. | 7.1  | 1         |

| #  | ARTICLE                                                                                                                                                                                                                                                       | IF   | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 37 | Emergence of coherence in the charge-density wave state of 2H-NbSe <sub>2</sub> . <i>Nature Communications</i> , 2015, 6, 6313.                                                                                                                               | 12.8 | 123       |
| 38 | Itinerant density wave instabilities at classical and quantum critical points. <i>Nature Physics</i> , 2015, 11, 865-871.                                                                                                                                     | 16.7 | 31        |
| 39 | Charge order from orbital-dependent coupling evidenced by NbSe <sub>2</sub> . <i>Nature Communications</i> , 2015, 6, 7034.                                                                                                                                   | 12.8 | 78        |
| 40 | Quasiperiodicity and 2D topology in 1D charge-ordered materials. <i>Europhysics Letters</i> , 2015, 111, 37008.                                                                                                                                               | 2.0  | 11        |
| 41 | Emergence of long-range order in sheets of magnetic dimers. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2014, 111, 14372-14377.                                                                                  | 7.1  | 23        |
| 42 | Quantum phase transition from triangular to stripe charge order in NbSe <sub>2</sub> . <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2013, 110, 1623-1627.                                                         | 7.1  | 145       |
| 43 | Chiral Phase Transition in Charge Ordered $\text{CeFe}_{2-x}\text{TiSe}_2$ . <i>Physical Review Letters</i> , 2012, 110, 126404.<br>xml�ns:mml="http://www.w3.org/1998/Math/MathML"<br>display="inline"><math>\text{CeFe}_{2-x}\text{TiSe}_2</math>           | 7.8  | 49        |
| 44 | Incommensurate antiferromagnetism in a pure spin system via cooperative organization of local and itinerant moments. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2013, 110, 3287-3292.                           | 7.1  | 29        |
| 45 | The chiral charge density wave transition in $\text{TiSe}_2$ . <i>Journal of Physics: Conference Series</i> , 2012, 391, 012167.                                                                                                                              | 0.4  | 1         |
| 46 | Comment on "Charge-parity symmetry observed through Friedel oscillations in chiral charge-density waves". <i>Physical Review B</i> , 2012, 86, .                                                                                                              | 3.2  | 5         |
| 47 | Pressure tuning of competing magnetic interactions in intermetallic CeFe $\text{CeFe}_{2-x}\text{TiSe}_2$ . <i>Physical Review B</i> , 2012, 86, .<br>xml�ns:mml="http://www.w3.org/1998/Math/MathML"<br>display="block">\text{CeFe}_{2-x}\text{TiSe}_2       | 3.2  | 13        |
| 48 | Polar charge and orbital order in 2H-TaS <sub>2</sub> . <i>Physical Review B</i> , 2012, 85, .                                                                                                                                                                | 3.2  | 19        |
