Version: 2024-02-01

213 papers	14,786 citations	17440 63 h-index	25787 108 g-index
216 all docs	216 docs citations	216 times ranked	17267 citing authors

#	Article	IF	Citations
1	Rethinking individual relationships with entities of nature. People and Nature, 2022, 4, 596-611.	3.7	9
2	Potential of Airborne LiDAR Derived Vegetation Structure for the Prediction of Animal Species Richness at Mount Kilimanjaro. Remote Sensing, 2022, 14, 786.	4.0	1
3	AVONET: morphological, ecological and geographical data for all birds. Ecology Letters, 2022, 25, 581-597.	6.4	280
4	Cover Image: Volume 25 Number 3, March 2022. Ecology Letters, 2022, 25, .	6.4	0
5	Avian seed dispersal may be insufficient for plants to track future temperature change on tropical mountains. Global Ecology and Biogeography, 2022, 31, 848-860.	5.8	5
6	Associations of bird and bat species richness with temperature and remote sensingâ€based vegetation structure on a tropical mountain. Biotropica, 2022, 54, 135-145.	1.6	2
7	The importance of species diversity for human well-being in Europe. Ecological Economics, 2021, 181, 106917.	5.7	88
8	Climatic effects on niche evolution in a passerine bird clade depend on paleoclimate reconstruction method. Evolution; International Journal of Organic Evolution, 2021, 75, 1046-1060.	2.3	8
9	Pathways linking biodiversity to human health: A conceptual framework. Environment International, 2021, 150, 106420.	10.0	210
10	Species richness is positively related to mental health â€“ A study for Germany. Landscape and Urban Planning, 2021, 211, 104084.	7.5	54
11	Specialists and generalists fulfil important and complementary functional roles in ecological processes. Functional Ecology, 2021, 35, 1810-1821.	3.6	16
12	Species richness is more important for ecosystem functioning than species turnover along an elevational gradient. Nature Ecology and Evolution, 2021, 5, 1582-1593.	7.8	35
13	Abiotic and biotic drivers of functional diversity and functional composition of bird and bat assemblages along a tropical elevation gradient. Diversity and Distributions, 2021, 27, 2344-2356.	4.1	13
14	Biodiversity in European agricultural landscapes: transformative societal changes needed. Trends in Ecology and Evolution, 2021, 36, 1067-1070.	8.7	29
15	The rise and fall of biodiversity in literature: A comprehensive quantification of historical changes in the use of vernacular labels for biological taxa in Western creative literature. People and Nature, 2021, 3, 1093-1109.	3.7	6
16	A research framework for projecting ecosystem change in highly diverse tropical mountain ecosystems. Oecologia, 2021, 195, 589-600.	2.0	12
17	Biodiversity and ecosystem functions depend on environmental conditions and resources rather than the geodiversity of a tropical biodiversity hotspot. Scientific Reports, 2021, 11, 24530.	3.3	12
18	TRY plant trait database â€“ enhanced coverage and open access. Global Change Biology, 2020, 26, 119-188.	9.5	1,038

#	Article	IF	Citations
19	Direct and indirect effects of elevation, climate and vegetation structure on bird communities on a tropical mountain. Acta Oecologica, 2020, 102, 103500.	1.1	21
20	Diurnal timing of nonmigratory movement by birds: the importance of foraging spatial scales. Journal of Avian Biology, 2020, 51, .	1.2	1
21	Direct and plantâ€mediated effects of climate on bird diversity in tropical mountains. Ecology and Evolution, 2020, 10, 14196-14208.	1.9	5
22	A tale of two seasons: The link between seasonal migration and climatic niches in passerine birds. Ecology and Evolution, 2020, 10, 11983-11997.	1.9	7
23	The global abundance of tree palms. Global Ecology and Biogeography, 2020, 29, 1495-1514.	5.8	62
24	Environmental context determines the limiting demographic processes for plant recruitment across a speciesâ€™ elevational range. Scientific Reports, 2020, 10, 10855.	3.3	6
25	Mapping human pressures on biodiversity across the planet uncovers anthropogenic threat complexes. People and Nature, 2020, 2, 380-394.	3.7	139
26	Similar composition of functional roles in Andean seedâ€dispersal networks, despite high species and interaction turnover. Ecology, 2020, 101, e03028.	3.2	22
27	Trait-Based Assessments of Climate-Change Impacts on Interacting Species. Trends in Ecology and Evolution, 2020, 35, 319-328.	8.7	106
28	Rates of ecomorphological trait evolution in passerine bird clades are independent of age. Biological Journal of the Linnean Society, 2020, 129, 543-557.	1.6	6
29	Non-material contributions of wildlife to human well-being: a systematic review. Environmental Research Letters, 2020, 15, 093005.	5.2	39
30	Functional and phylogenetic diversity of bird assemblages are filtered by different biotic factors on tropical mountains. Journal of Biogeography, 2019, 46, 291-303.	3.0	56
31	Large birds travel farther in homogeneous environments. Global Ecology and Biogeography, 2019, 28, 576-587.	5.8	39
32	Projecting consequences of global warming for the functional diversity of fleshyâ€fruited plants and frugivorous birds along a tropical elevational gradient. Diversity and Distributions, 2019, 25, 1362-1374.	4.1	12
33	Climateâ€“land-use interactions shape tropical mountain biodiversity and ecosystem functions. Nature, 2019, 568, 88-92.	27.8	313
34	Longâ€term declines of European insectivorous bird populations and potential causes. Conservation Biology, 2019, 33, 1120-1130.	4.7	187
35	Challenges in the conservation of wideâ€ranging nomadic species. Journal of Applied Ecology, 2019, 56, 1916-1926.	4.0	39
36	Attitudes towards returning wolves (Canis lupus) in Germany: Exposure, information sources and trust matter. Biological Conservation, 2019, 234, 202-210.	4.1	70

#	Article	IF	Citations
37	Projected impacts of climate change on functional diversity of frugivorous birds along a tropical elevational gradient. Scientific Reports, 2019, 9, 17708.	3.3	34
38	Direct and indirect effects of plant and frugivore diversity on structural and functional components of fruit removal by birds. Oecologia, 2019, 189, 435-445.	2.0	15
39	Seedâ€dispersal networks are more specialized in the Neotropics than in the Afrotropics. Global Ecology and Biogeography, 2019, 28, 248-261.	5.8	45
40	Functional responses of avian frugivores to variation in fruit resources between natural and fragmented forests. Functional Ecology, 2019, 33, 399-410.	3.6	14
41	Different responses of taxonomic and functional bird diversity to forest fragmentation across an elevational gradient. Oecologia, 2019, 189, 863-873.	2.0	16
42	A comprehensive analysis of autocorrelation and bias in home range estimation. Ecological Monographs, 2019, 89, e01344.	5.4	127
43	Morphological trait matching shapes plantâ€“frugivore networks across the Andes. Ecography, 2018, 41, 1910-1919.	4.5	71
44	Disentangling the effects of multiple environmental drivers on population changes within communities. Journal of Animal Ecology, 2018, 87, 1034-1045.	2.8	24
45	Response to Kabisch and Colleagues. BioScience, 2018, 68, 167-168.	4.9	0
46	Spatial patterns of pathogenic and mutualistic fungi across the elevational range of a host plant. Journal of Ecology, 2018, 106, 1545-1557.	4.0	25
47	Moving in the Anthropocene: Global reductions in terrestrial mammalian movements. Science, 2018, 359, 466-469.	12.6	783
48	Biotic interactions and seed deposition rather than abiotic factors determine recruitment at elevational range limits of an alpine tree. Journal of Ecology, 2018, 106, 948-959.	4.0	49
49	Seedâ€dispersal networks respond differently to resource effects in open and forest habitats. Oikos, 2018, 127, 847-854.	2.7	11
50	Large mammal diversity matters for wildlife tourism in Southern African Protected Areas: Insights for management. Ecosystem Services, 2018, 31, 481-490.	5.4	28
51	Bioenergy cropland expansion may offset positive effects of climate change mitigation for global vertebrate diversity. Proceedings of the National Academy of Sciences of the United States of America, 2018, 115, 13294-13299.	7.1	82
52	Elevationâ€dependent effects of forest fragmentation on plantâ€“bird interaction networks in the tropical Andes. Ecography, 2018, 41, 1497-1506.	4.5	25
53	Effects of phylogeny and geography on ecomorphological traits in passerine bird clades. Journal of Biogeography, 2018, 45, 2337-2347.	3.0	8
54	Evidence for distinct evolutionary optima in the morphology of migratory and resident birds. Journal of Avian Biology, 2018, 49, e01807.	1.2	16

#	Article	IF	Citations
55	Plant and animal functional diversity drive mutualistic network assembly across an elevational gradient. Nature Communications, 2018, 9, 3177.	12.8	63
56	Spatio-temporal variation in bird assemblages is associated with fluctuations in temperature and precipitation along a tropical elevational gradient. PLoS ONE, 2018, 13, e0196179.	2.5	37
57	Cross-realm assessment of climate change impacts on speciesâ€™ abundance trends. Nature Ecology and Evolution, 2017, 1, 67.	7.8	83
58	Functionally specialised birds respond flexibly to seasonal changes in fruit availability. Journal of Animal Ecology, 2017, 86, 800-811.	2.8	42
59	Direct and indirect effects of climate, human disturbance and plant traits on avian functional diversity. Global Ecology and Biogeography, 2017, 26, 963-972.	5.8	50
60	Global patterns of interaction specialization in birdâ€“flower networks. Journal of Biogeography, 2017, 44, 1891-1910.	3.0	68
61	Global patterns of thermal tolerances and vulnerability of endotherms to climate change remain robust irrespective of varying data suitability criteria. Proceedings of the Royal Society B: Biological Sciences, 2017, 284, 20170232.	2.6	5
62	The influence of thermal tolerances on geographical ranges of endotherms. Global Ecology and Biogeography, 2017, 26, 650-668.	5.8	36
63	Mismatches between supply and demand in wildlife tourism: Insights for assessing cultural ecosystem services. Ecological Indicators, 2017, 78, 282-291.	6.3	31
64	Positive relationship between fruit removal by animals and seedling recruitment in a tropical forest. Basic and Applied Ecology, 2017, 20, 31-39.	2.7	13
65	The database of the <scp>PREDICTS</scp> (Projecting Responses of Ecological Diversity In Changing) Tj ETQq1 1 0.784314 rgBT /Ov	1.9	186
66	Phylogenetic signals in thermal traits remain stronger in the tropics if we can believe published physiological data. A reply to McKechnie etÂal., â€œData quality problems undermine analyses of endotherm upper critical temperaturesâ€• Journal of Biogeography, 2017, 44, 2427-2431.	3.0	3
67	Cross-taxa generalities in the relationship between population abundance and ambient temperatures. Proceedings of the Royal Society B: Biological Sciences, 2017, 284, 20170870.	2.6	17
68	Quantification of climatic niches in birds: adding the temporal dimension. Journal of Avian Biology, 2017, 48, 1517-1531.	1.2	37
69	When, Where, and How Nature Matters for Ecosystem Services: Challenges for the Next Generation of Ecosystem Service Models. BioScience, 2017, 67, 820-833.	4.9	114
70	Synergistic effects of climate and land use on avian betaâ€diversity. Diversity and Distributions, 2017, 23, 1246-1255.	4.1	27
71	A framework integrating physiology, dispersal and landâ€use to project species ranges under climate change. Journal of Avian Biology, 2017, 48, 1532-1548.	1.2	14
72	Opposed latitudinal patterns of networkâ€derived and dietary specialization in avian plantâ€“frugivore interaction systems. Ecography, 2017, 40, 1395-1401.	4.5	111

#	Article	IF	Citations
73	Sugar landscapes and pollinatorâ€mediated interactions in plant communities. Ecography, 2017, 40, 1129-1138.	4.5	41
74	Importance of animal and plant traits for fruit removal and seedling recruitment in a tropical forest. Oikos, 2017, 126, 823-832.	2.7	59
75	Coexistence of plant species in a biodiversity hotspot is stabilized by competition but not by seed predation. Oikos, 2017, 126, .	2.7	19
76	Phylogenetic and Functional Diversity of Fleshy-Fruited Plants Are Positively Associated with Seedling Diversity in a Tropical Montane Forest. Frontiers in Ecology and Evolution, 2017, 5, .	2.2	5
77	Relationships between abiotic environment, plant functional traits, and animal body size at Mount Kilimanjaro, Tanzania. PLoS ONE, 2017, 12, e0174157.	2.5	12
78	The importance of vegetation density for touristsâ€™ wildlife viewing experience and satisfaction in African savannah ecosystems. PLoS ONE, 2017, 12, e0185793.	2.5	13
79	Improving the community-temperature index as a climate change indicator. PLoS ONE, 2017, 12, e0184275.	2.5	36
80	Macroecology meets IPBES. Frontiers of Biogeography, 2016, 7, .	1.8	0
81	Biodiversity, scenery and infrastructure: Factors driving wildlife tourism in an African savannah national park. Biological Conservation, 2016, 201, 60-68.	4.1	42
82	Responses of nectarâ€feeding birds to floral resources at multiple spatial scales. Ecography, 2016, 39, 619-629.	4.5	39
83	Changes in abundances of forest understorey birds on Africa's highest mountain suggest subtle effects of climate change. Diversity and Distributions, 2016, 22, 288-299.	4.1	33
84	Continentâ€scale global change attribution in European birds â€combining annual and decadal time scales. Global Change Biology, 2016, 22, 530-543.	9.5	51
85	Contrasting changes in the abundance and diversity of North American bird assemblages from 1971 to 2010. Global Change Biology, 2016, 22, 3948-3959.	9.5	79
86	Pollination and seed dispersal are the most threatened processes of plant regeneration. Scientific Reports, 2016, 6, 29839.	3.3	98
87	Predictors of elevational biodiversity gradients change from single taxa to the multi-taxa community level. Nature Communications, 2016, 7, 13736.	12.8	229
88	Ecological networks are more sensitive to plant than to animal extinction under climate change. Nature Communications, 2016, 7, 13965.	12.8	180
89	Experience drives innovation of new migration patterns of whooping cranes in response to global change. Nature Communications, 2016, 7, 12793.	12.8	83
90	A bird pollinator shows positive frequency dependence and constancy of species choice in natural plant communities. Ecology, 2016, 97, 3110-3118.	3.2	13
