#	ARTICLE	IF	CITATIONS
1	Evolution of amino acid propensities under stability-mediated epistasis. <i>Molecular Biology and Evolution</i> , 2022, , .	8.9	7
2	Site-and-branch-heterogeneous analyses of an expanded dataset favour mitochondria as sister to known Alphaproteobacteria. <i>Nature Ecology and Evolution</i> , 2022, 6, 253-262.	7.8	48
3	Ancestral state reconstruction with large numbers of sequences and edge-length estimation. <i>Journal of Mathematical Biology</i> , 2022, 84, 21.	1.9	2
4	Evolution: Reconstructing the Timeline of Eukaryogenesis. <i>Current Biology</i> , 2021, 31, R193-R196.	3.9	12
5	Long Branch Attraction Biases in Phylogenetics. <i>Systematic Biology</i> , 2021, 70, 838-843.	5.6	26
6	Shifts in amino acid preferences as proteins evolve: A synthesis of experimental and theoretical work. <i>Protein Science</i> , 2021, 30, 2009-2028.	7.6	5
7	Cellular costs underpin micronutrient limitation in phytoplankton. <i>Science Advances</i> , 2021, 7, .	10.3	17
8	Conditions under which distributions of edge length ratios on phylogenetic trees can be used to order evolutionary events. <i>Journal of Theoretical Biology</i> , 2021, 526, 110788.	1.7	6
9	A Phenotype-Genotype Codon Model for Detecting Adaptive Evolution. <i>Systematic Biology</i> , 2020, 69, 722-738.	5.6	12
10	On the Use of Information Criteria for Model Selection in Phylogenetics. <i>Molecular Biology and Evolution</i> , 2020, 37, 549-562.	8.9	22
11	The Relative Importance of Modeling Site Pattern Heterogeneity Versus Partition-Wise Heterotachy in Phylogenomic Inference. <i>Systematic Biology</i> , 2019, 68, 1003-1019.	5.6	45
12	ModL: exploring and restoring regularity when testing for positive selection. <i>Bioinformatics</i> , 2019, 35, 2545-2554.	4.1	3
13	Looking for Darwin in Genomic Sequences: Validity and Success Depends on the Relationship Between Model and Data. <i>Methods in Molecular Biology</i> , 2019, 1910, 399-426.	0.9	4
14	Accelerated Estimation of Frequency Classes in Site-Heterogeneous Profile Mixture Models. <i>Molecular Biology and Evolution</i> , 2018, 35, 1266-1283.	8.9	22
15	Phenomenological Load on Model Parameters Can Lead to False Biological Conclusions. <i>Molecular Biology and Evolution</i> , 2018, 35, 1473-1488.	8.9	23
16	Bayes factor biases for non-nested models and corrections. <i>Canadian Journal of Statistics</i> , 2017, 45, 290-309.	0.9	2
17	Nuclear genetic codes with a different meaning of the UAG and the UAA codon. <i>BMC Biology</i> , 2017, 15, 8.	3.8	25
18	Ribosomal RNA Genes Contribute to the Formation of Pseudogenes and Junk DNA in the Human Genome. <i>Genome Biology and Evolution</i> , 2017, 9, 380-397.	2.5	24

#	ARTICLE	IF	CITATIONS
19	Split-specific bootstrap measures for quantifying phylogenetic stability and the influence of taxon selection. <i>Molecular Phylogenetics and Evolution</i> , 2016, 105, 114-125.	2.7	1
20	Smoothed Bootstrap Aggregation for Assessing Selection Pressure at Amino Acid Sites. <i>Molecular Biology and Evolution</i> , 2016, 33, 2976-2989.	8.9	6
21	Shifting Balance on a Static Mutationâ€™Selection Landscape: A Novel Scenario of Positive Selection. <i>Molecular Biology and Evolution</i> , 2016, 34, msw237.	8.9	24
22	Bayesian Long Branch Attraction Bias and Corrections. <i>Systematic Biology</i> , 2015, 64, 243-255.	5.6	22
23	An Amino Acid Substitution-Selection Model Adjusts Residue Fitness to Improve Phylogenetic Estimation. <i>Molecular Biology and Evolution</i> , 2014, 31, 779-792.	8.9	22
24	Alignment Errors Strongly Impact Likelihood-Based Tests for Comparing Topologies. <i>Molecular Biology and Evolution</i> , 2014, 31, 3057-3067.	8.9	23
25	Tests for Two Trees Using Likelihood Methods. <i>Molecular Biology and Evolution</i> , 2014, 31, 1029-1039.	8.9	16
26	A SUF Fe-S Cluster Biogenesis System in the Mitochondrion-Related Organelles of the Anaerobic Protist <i>Pygsuia</i> . <i>Current Biology</i> , 2014, 24, 1176-1186.	3.9	94
27	The Probability of Correctly Resolving a Split as an Experimental Design Criterion in Phylogenetics. <i>Systematic Biology</i> , 2012, 61, 811-821.	5.6	15
28	Improved Least Squares Topology Testing and Estimation. <i>Systematic Biology</i> , 2011, 60, 668-675.	5.6	4
29	A phylogenetic mixture model for the identification of functionally divergent protein residues. <i>Bioinformatics</i> , 2011, 27, 2655-2663.	4.1	27
30	First-Order Correct Bootstrap Support Adjustments for Splits that Allow Hypothesis Testing When Using Maximum Likelihood Estimation. <i>Molecular Biology and Evolution</i> , 2010, 27, 1621-1629.	8.9	31
31	Bootstrap Support Is Not First-Order Correct. <i>Systematic Biology</i> , 2009, 58, 211-223.	5.6	59
32	Statistical Analysis of Expressed Sequence Tags. <i>Methods in Molecular Biology</i> , 2009, 533, 277-287.	0.9	0
33	A class frequency mixture model that adjusts for site-specific amino acid frequencies and improves inference of protein phylogeny. <i>BMC Evolutionary Biology</i> , 2008, 8, 331.	3.2	94
34	On the Distributions of Bootstrap Support and Posterior Distributions for a Star Tree. <i>Systematic Biology</i> , 2008, 57, 602-612.	5.6	57
35	On Reduced Amino Acid Alphabets for Phylogenetic Inference. <i>Molecular Biology and Evolution</i> , 2007, 24, 2139-2150.	8.9	157
36	Using minimum bootstrap support for splits to construct confidence regions for trees. <i>Evolutionary Bioinformatics</i> , 2007, 2, 129-43.	1.2	1

#	ARTICLE	IF	CITATIONS
37	Modelling Prokaryote Gene Content. <i>Evolutionary Bioinformatics</i> , 2006, 2, 117693430600200.	1.2	10
38	Biases in Phylogenetic Estimation Can Be Caused by Random Sequence Segments. <i>Journal of Molecular Evolution</i> , 2005, 61, 351-359.	1.8	25
39	CONTINUOUS-TIME MARKOV MODELS FOR SPECIES INTERACTIONS. <i>Ecology</i> , 2005, 86, 3272-3278.	3.2	17
40	On Inconsistency of the Neighbor-Joining, Least Squares, and Minimum Evolution Estimation When Substitution Processes Are Incorrectly Modeled. <i>Molecular Biology and Evolution</i> , 2004, 21, 1629-1642.	8.9	43
41	Covariation Shifts Cause a Long-Branch Attraction Artifact That Unites Microsporidia and Archaeobacteria in EF-1 α Phylogenies. <i>Molecular Biology and Evolution</i> , 2004, 21, 1340-1349.	8.9	93
42	Confidence Regions and Hypothesis Tests for Topologies Using Generalized Least Squares. <i>Molecular Biology and Evolution</i> , 2003, 20, 862-868.	8.9	22
43	Estimation of Rates-Across-Sites Distributions in Phylogenetic Substitution Models. <i>Systematic Biology</i> , 2003, 52, 594-603.	5.6	55
44	Testing for Differences in Rates-Across-Sites Distributions in Phylogenetic Subtrees. <i>Molecular Biology and Evolution</i> , 2002, 19, 1514-1523.	8.9	51
45	Estimation of a residual distribution with small numbers of repeated measurements. <i>Canadian Journal of Statistics</i> , 2002, 30, 383-400.	0.9	3
46	Estimation of relaxation time distributions in magnetic resonance imaging. <i>Canadian Journal of Statistics</i> , 2001, 29, 379-394.	0.9	0
