#	ARTICLE	IF	CITATIONS
1	A Surface Exposed, Two-Domain Lipoprotein Cargo of a Type XI Secretion System Promotes Colonization of Host Intestinal Epithelia Expressing Glycans. <i>Frontiers in Microbiology</i> , 2022, 13, 800366.	3.5	3
2	Apex Predator Nematodes and Meso-Predator Bacteria Consume Their Basal Insect Prey through Discrete Stages of Chemical Transformations. <i>MSystems</i> , 2022, 7, e0031222.	3.8	3
3	Breaking Barriers with Bread: Using the Sourdough Starter Microbiome to Teach High-Throughput Sequencing Techniques. <i>Journal of Microbiology and Biology Education</i> , 2022, 23, .	1.0	2
4	From Binary Model Systems to the Human Microbiome: Factors That Drive Strain Specificity in Host-Symbiont Associations. <i>Frontiers in Ecology and Evolution</i> , 2021, 9, .	2.2	3
5	Interactions of host-associated multispecies bacterial communities. <i>Periodontology 2000</i> , 2021, 86, 14-31.	13.4	3
6	A Widespread Bacterial Secretion System with Diverse Substrates. <i>MBio</i> , 2021, 12, e0195621.	4.1	30
7	Xenorhabdus nematophila bacteria shift from mutualistic to virulent Lrp-dependent phenotypes within the receptacles of Steinernema carpocapsae insecticidal infective stage nematodes. <i>Environmental Microbiology</i> , 2020, 22, 5433-5449.	3.8	9
8	R-type bacteriocins of <i>Xenorhabdus bovienii</i> determine the outcome of interspecies competition in a natural host environment. <i>Microbiology (United Kingdom)</i> , 2020, 166, 1074-1087.	1.8	8
9	Symbiont-mediated competition: <i>< i>Xenorhabdus bovienii</i></i> confer an advantage to their nematode host <i>< i>Steinernema affine</i></i> by killing competitor <i>< i>Steinernema feltiae</i></i> . <i>Environmental Microbiology</i> , 2019, 21, 3229-3243.	3.8	18
10	Studying the Symbiotic Bacterium <i>Xenorhabdus nematophila</i> in Individual, Living <i>< i>Steinernema carpocapsae</i></i> Nematodes Using Microfluidic Systems. <i>MSphere</i> , 2018, 3, .	2.9	11
11	High Levels of the <i>Xenorhabdus nematophila</i> Transcription Factor Lrp Promote Mutualism with the <i>Steinernema carpocapsae</i> Nematode Host. <i>Applied and Environmental Microbiology</i> , 2017, 83, .	3.1	14
12	Ready or Not: Microbial Adaptive Responses in Dynamic Symbiosis Environments. <i>Journal of Bacteriology</i> , 2017, 199, .	2.2	26
13	The Global Transcription Factor Lrp Is both Essential for and Inhibitory to <i>Xenorhabdus nematophila</i> Insecticidal Activity. <i>Applied and Environmental Microbiology</i> , 2017, 83, .	3.1	17
14	R-type bacteriocins in related strains of <i>< i>Xenorhabdus bovienii</i></i> : <i>Xenorhabdin</i> tail fiber modularity and contribution to competitiveness. <i>FEMS Microbiology Letters</i> , 2017, 364, fnw235.	1.8	11
15	The insect pathogenic bacterium <i>Xenorhabdus innexi</i> has attenuated virulence in multiple insect model hosts yet encodes a potent mosquitocidal toxin. <i>BMC Genomics</i> , 2017, 18, 927.	2.8	34
16	The Global Regulators Lrp, LeuO, and HexA Control Secondary Metabolism in Entomopathogenic Bacteria. <i>Frontiers in Microbiology</i> , 2017, 8, 209.	3.5	29
17	Nematode-bacteria mutualism: Selection within the mutualism supersedes selection outside of the mutualism. <i>Evolution; International Journal of Organic Evolution</i> , 2016, 70, 687-695.	2.3	17
18	Are you my symbiont? Microbial polymorphic toxins and antimicrobial compounds as honest signals of beneficial symbiotic defensive traits. <i>Current Opinion in Microbiology</i> , 2016, 31, 184-190.	5.1	33

#	ARTICLE	IF	CITATIONS
19	Nematodes and bacteria: Allies in the suppression of insect immune defenses. , 2016, , .	0	
20	A <i>Photobacterium</i> Natural Product Inhibits Insect Juvenile Hormone Epoxide Hydrolase. ChemBioChem, 2015, 16, 766-771.	2.6	36
21	Comparison of <i>Xenorhabdus bovienii</i> bacterial strain genomes reveals diversity in symbiotic functions. BMC Genomics, 2015, 16, 889.	2.8	22
22	Comparative genomics of <i>Steinerinema</i> reveals deeply conserved gene regulatory networks. Genome Biology, 2015, 16, 200.	8.8	77
23	<i>Xenorhabdus bovienii</i> Strain Diversity Impacts Coevolution and Symbiotic Maintenance with <i>Steinerinema</i> spp. Nematode Hosts. MBio, 2015, 6, e00076.	4.1	63
24	The Global Transcription Factor Lrp Controls Virulence Modulation in <i>Xenorhabdus nematophila</i> . Journal of Bacteriology, 2015, 197, 3015-3025.	2.2	33
25	<scp>NilD CRISPR RNA</scp> contributes to <scp><i>X</i></scp><i>xenorhabdus nematophila</i></scp> colonization of symbiotic host nematodes. Molecular Microbiology, 2014, 93, 1026-1042.	2.5	23
26	Microbial Population Dynamics in the Hemolymph of <i>Manduca sexta</i> Infected with <i>Xenorhabdus nematophila</i> and the Entomopathogenic Nematode <i>Steinerinema carpocapsae</i> . Applied and Environmental Microbiology, 2014, 80, 4277-4285.	3.1	27
27	It Takes a Village: Ecological and Fitness Impacts of Multipartite Mutualism. Annual Review of Microbiology, 2013, 67, 161-178.	7.3	73
28	Previously unrecognized stages of species-specific colonization in the mutualism between <i>Xenorhabdus</i> bacteria and <i>Steinerinema</i> nematodes. Cellular Microbiology, 2013, 15, 1545-1559.	2.1	38
29	Immune Signaling and Antimicrobial Peptide Expression in Lepidoptera. Insects, 2013, 4, 320-338.	2.2	36
30	Rhabdopeptides as Insect-Specific Virulence Factors from Entomopathogenic Bacteria. ChemBioChem, 2013, 14, 1991-1997.	2.6	59
31	An Entomopathogenic Nematode by Any Other Name. PLoS Pathogens, 2012, 8, e1002527.	4.7	189
32	Mutational Analyses Reveal Overall Topology and Functional Regions of NilB, a Bacterial Outer Membrane Protein Required for Host Association in a Model of Animal-Microbe Mutualism. Journal of Bacteriology, 2012, 194, 1763-1776.	2.2	17
33	Nematode-Bacterium Symbioses—Cooperation and Conflict Revealed in the “Omics” Age. Biological Bulletin, 2012, 223, 85-102.	1.8	60
34	Visualizing Bacteria in Nematodes using Fluorescent Microscopy. Journal of Visualized Experiments, 2012, , .	0.3	13
35	Nematode parasites, pathogens and associates of insects and invertebrates of economic importance. , 2012, , 373-426.	65	
36	Rearing and Injection of Manduca sexta Larvae to Assess Bacterial Virulence. Journal of Visualized Experiments, 2012, , e4295.	0.3	8

#	ARTICLE	IF	CITATIONS
37	Phenotypic variation and host interactions of <i>Xenorhabdus bovienii</i> SS-2004, the entomopathogenic symbiont of <i>Steinernema jolleti</i> nematodes. <i>Environmental Microbiology</i> , 2012, 14, 924-939.	3.8	38
38	The Entomopathogenic Bacterial Endosymbionts <i>Xenorhabdus</i> and <i>Photobacterium</i> : Convergent Lifestyles from Divergent Genomes. <i>PLoS ONE</i> , 2011, 6, e27909.	2.5	161
39	Assessing computational tools for the discovery of small RNA genes in bacteria. <i>Rna</i> , 2011, 17, 1635-1647.	3.5	34
40	Symbiosis research, technology, and education: Proceedings of the 6th International Symbiosis Society Congress held in Madison Wisconsin, USA, August 2009. <i>Symbiosis</i> , 2010, 51, 1-12.	2.3	1
41	Units of plasticity in bacterial genomes: new insight from the comparative genomics of two bacteria interacting with invertebrates, <i>Photobacterium</i> and <i>Xenorhabdus</i> . <i>BMC Genomics</i> , 2010, 11, 568.	2.8	55
42	Common trends in mutualism revealed by model associations between invertebrates and bacteria: Table 1. <i>FEMS Microbiology Reviews</i> , 2010, 34, 41-58.	8.6	97
43	Examination of <i>Xenorhabdus nematophila</i> Lipases in Pathogenic and Mutualistic Host Interactions Reveals a Role for <i>xlpA</i> in Nematode Progeny Production. <i>Applied and Environmental Microbiology</i> , 2010, 76, 221-229.	3.1	36
44	CpxRA Contributes to <i>Xenorhabdus nematophila</i> Virulence through Regulation of <i>lrhA</i> and Modulation of Insect Immunity. <i>Applied and Environmental Microbiology</i> , 2009, 75, 3998-4006.	3.1	25
45	CpxRA Influences <i>Xenorhabdus nematophila</i> Colonization Initiation and Outgrowth in <i>Steinernema carpocapsae</i> Nematodes through Regulation of the <i>nil</i> Locus. <i>Applied and Environmental Microbiology</i> , 2009, 75, 4007-4014.	3.1	22
46	Isolation and Characterization of <i>Xenorhabdus nematophila</i> Transposon Insertion Mutants Defective in Lipase Activity against Tween. <i>Journal of Bacteriology</i> , 2009, 191, 5325-5331.	2.2	9
47	Masters of conquest and pillage: <i>Xenorhabdus nematophila</i> global regulators control transitions from virulence to nutrient acquisition. <i>Cellular Microbiology</i> , 2009, 11, 1025-1033.	2.1	87
48	The <i>Xenorhabdus nematophila</i> <i>nilABC</i> Genes Confer the Ability of <i>Xenorhabdus</i> spp. To Colonize <i>Steinernema carpocapsae</i> Nematodes. <i>Journal of Bacteriology</i> , 2008, 190, 4121-4128.	2.2	52
49	<i>Xenorhabdus nematophila</i> <i>lrhA</i> Is Necessary for Motility, Lipase Activity, Toxin Expression, and Virulence in <i>Manduca sexta</i> Insects. <i>Journal of Bacteriology</i> , 2008, 190, 4870-4879.	2.2	36
50	CpxRA Regulates Mutualism and Pathogenesis in <i>Xenorhabdus nematophila</i> . <i>Applied and Environmental Microbiology</i> , 2007, 73, 7826-7836.	3.1	33
51	Influence of nematode age and culture conditions on morphological and physiological parameters in the bacterial vesicle of <i>Steinernema carpocapsae</i> (Nematoda: Steinernematidae). <i>Journal of Invertebrate Pathology</i> , 2007, 95, 110-118.	3.2	38
52	They've got a ticket to ride: <i>Xenorhabdus nematophila</i> -“ <i>Steinernema carpocapsae</i> symbiosis. <i>Current Opinion in Microbiology</i> , 2007, 10, 225-230.	5.1	95
53	Friend and foe: the two faces of <i>Xenorhabdus nematophila</i> . <i>Nature Reviews Microbiology</i> , 2007, 5, 634-646.	28.6	178
54	Clonal variation in <i>Xenorhabdus nematophila</i> virulence and suppression of <i>Manduca sexta</i> immunity. <i>Cellular Microbiology</i> , 2007, 9, 645-656.	2.1	66

#	ARTICLE	IF	CITATIONS
55	The global regulator Lrp contributes to mutualism, pathogenesis and phenotypic variation in the bacterium <i>Xenorhabdus nematophila</i> . <i>Cellular Microbiology</i> , 2007, 9, 1311-1323.	2.1	77
56	Mutualism and pathogenesis in <i>Xenorhabdus</i> and <i>Photobacterium</i> : two roads to the same destination. <i>Molecular Microbiology</i> , 2007, 64, 260-268.	2.5	264
57	Optical mapping as a routine tool for bacterial genome sequence finishing. <i>BMC Genomics</i> , 2007, 8, 321.	2.8	104
58	Dangerous liaisons: The symbiosis of entomopathogenic nematodes and bacteria. <i>Biological Control</i> , 2006, 38, 22-46.	3.0	101
59	<i>nirR</i> is necessary for coordinate repression of <i>Xenorhabdus nematophila</i> mutualism genes. <i>Molecular Microbiology</i> , 2006, 62, 760-771.	2.5	23
60	Expression and activity of a <i>Xenorhabdus nematophila</i> haemolysin required for full virulence towards <i>Manduca sexta</i> insects. <i>Cellular Microbiology</i> , 2005, 7, 209-219.	2.1	67
61	Expression and activity of a <i>Xenorhabdus nematophila</i> haemolysin required for full virulence towards <i>Manduca sexta</i> insects. <i>Cellular Microbiology</i> , 2005, 7, 899-900.	2.1	6
62	The <i>Steinernema carpocapsae</i> intestinal vesicle contains a subcellular structure with which <i>Xenorhabdus nematophila</i> associates during colonization initiation. <i>Cellular Microbiology</i> , 2005, 7, 1723-1735.	2.1	59
63	Analysis of <i>Xenorhabdus</i> fumigatus nematophila metabolic mutants yields insight into stages of <i>Steinernema</i> fumigatus carpocapsae nematode intestinal colonization. <i>Molecular Microbiology</i> , 2005, 58, 28-45.	2.5	37
64	Pyrimidine Nucleoside Salvage Confers an Advantage to <i>Xenorhabdus nematophila</i> in Its Host Interactions. <i>Applied and Environmental Microbiology</i> , 2005, 71, 6254-6259.	3.1	13
65	An encoded N-terminal extension results in low levels of heterologous protein production in <i>Escherichia coli</i> . <i>Microbial Cell Factories</i> , 2005, 4, 22.	4.0	7
66	Identification and Functional Characterization of a <i>Xenorhabdus nematophila</i> Oligopeptide Permease. <i>Applied and Environmental Microbiology</i> , 2004, 70, 5621-5627.	3.1	42
67	Characterization of a lipoprotein, <i>NilC</i> , required by <i>Xenorhabdus nematophila</i> for mutualism with its nematode host. <i>Molecular Microbiology</i> , 2004, 54, 464-477.	2.5	44
68	Comparative study of the entomopathogenic nematode, <i>Steinernema carpocapsae</i> , reared on mutant and wild-type <i>Xenorhabdus nematophila</i> . <i>Biological Control</i> , 2004, 29, 382-391.	3.0	36
69	<i>Xenorhabdus nematophila</i> Requires an Intact <i>iscRSUA-hscBA-fdx</i> Operon To Colonize <i>Steinernema carpocapsae</i> Nematodes. <i>Journal of Bacteriology</i> , 2003, 185, 3678-3682.	2.2	16
70	Early Colonization Events in the Mutualistic Association between <i>Steinernema carpocapsae</i> Nematodes and <i>Xenorhabdus nematophila</i> Bacteria. <i>Journal of Bacteriology</i> , 2003, 185, 3147-3154.	2.2	138
71	Response of Ants to a Deterrent Factor(s) Produced by the Symbiotic Bacteria of Entomopathogenic Nematodes. <i>Applied and Environmental Microbiology</i> , 2002, 68, 6202-6209.	3.1	96
72	Identification of <i>Xenorhabdus nematophila</i> genes required for mutualistic colonization of <i>Steinernema carpocapsae</i> nematodes. <i>Molecular Microbiology</i> , 2002, 45, 1337-1353.	2.5	94

#	ARTICLE	IF	CITATIONS
73	Xenorhabdus nematophilus as a Model for Host-Bacterium Interactions: <i>rpoS</i> Is Necessary for Mutualism with Nematodes. <i>Journal of Bacteriology</i> , 2001, 183, 4687-4693.	2.2	93
74	Homocysteine thiolactone is a positive effector of Δf S levels in <i>Escherichia coli</i> . <i>FEMS Microbiology Letters</i> , 2000, 185, 117-121.	1.8	14
75	Homocysteine thiolactone is a positive effector of Δf S levels in <i>Escherichia coli</i> . <i>FEMS Microbiology Letters</i> , 2000, 185, 117-121.	1.8	11
76	Beyond Homing: Competition between Intron Endonucleases Confers a Selective Advantage on Flanking Genetic Markers. <i>Cell</i> , 1996, 84, 211-221.	28.9	96
77	Regulation of Gene Expression in Stationary Phase. , 1996, , 571-583.		12
78	The DNA polymerase genes of several HMU-bacteriophages have similar group I introns with highly divergent open reading frames. <i>Nucleic Acids Research</i> , 1994, 22, 3715-3721.	14.5	49
79	Amino acid sequence motif of group I intron endonucleases is conserved in open reading frames of group II introns. <i>Trends in Biochemical Sciences</i> , 1994, 19, 402-404.	7.5	142
80	Protein introns: A new home for endonucleases. <i>Cell</i> , 1992, 71, 183-186.	28.9	84
81	Bacterial origin of a chloroplast intron: conserved self-splicing group I introns in cyanobacteria. <i>Science</i> , 1990, 250, 1566-1570.	12.6	238
82	A self-splicing group I intron in the DNA polymerase gene of <i>bacillus subtilis</i> bacteriophage SPO1. <i>Cell</i> , 1990, 63, 417-424.	28.9	87
