#	Article	IF	CITATIONS
1	Excited states of lutetium oxide and its singly charged cation. Journal of Chemical Physics, 2022, 156, 084303.	3.0	2
2	Rotational and translational diffusion of liquid n-hexane: EFP-based molecular dynamics analysis. Journal of Chemical Physics, 2022, 156, 114503.	3.0	1
3	A Task-Based Approach to Parallel Restricted Hartree–Fock Calculations. Journal of Chemical Theory and Computation, 2022, , .	5.3	3
4	Molecular interactions in diffusion-controlled aldol condensation with mesoporous silica nanoparticles. Physical Chemistry Chemical Physics, 2022, 24, 10475-10487.	2.8	3
5	Intramolecular hydrogen bonding analysis. Journal of Chemical Physics, 2022, 156, 174302.	3.0	5
6	Combined quantum Monte Carlo – effective fragment molecular orbital method: fragmentation across covalent bonds. Physical Chemistry Chemical Physics, 2021, 23, 14308-14314.	2.8	2
7	Outcomes of OpenMP Hackathon: OpenMP Application Experiences with the Offloading Model (Part II). Lecture Notes in Computer Science, 2021, , 81-95.	1.3	5
8	Computation of host–guest binding free energies with a new quantum mechanics based mining minima algorithm. Journal of Chemical Physics, 2021, 154, 104122.	3.0	6
9	Effective Fragment Potential-Based Molecular Dynamics Studies of Diffusion in Acetone and Hexane. Journal of Physical Chemistry A, 2021, 125, 3398-3405.	2.5	5
10	Introducing LibXC into GAMESS (US). Mendeleev Communications, 2021, 31, 302-305.	1.6	2
11	Introducing LibXC into GAMESS (US). Mendeleev Communications, 2021, 31, 302-305.	1.6	0
12	Model protein excited states: MRCI calculations with large active spaces vs CC2 method. Journal of Chemical Physics, 2021, 154, 214105.	3.0	1
13	A Massively Parallel Implementation of the CCSD(T) Method Using the Resolution-of-the-Identity Approximation and a Hybrid Distributed/Shared Memory Parallelization Model. Journal of Chemical Theory and Computation, 2021, 17, 4799-4822.	5.3	23
14	Bonding analysis of water clusters using quasi-atomic orbitals. Physical Chemistry Chemical Physics, 2021, 23, 18734-18743.	2.8	7
15	PDG: A Composite Method Based on the Resolution of the Identity. Journal of Physical Chemistry A, 2021, 125, 9421-9429.	2.5	3
16	Scalable ab initio fragmentation methods based on a truncated expansion of the non-orthogonal molecular orbital model. Journal of Chemical Physics, 2021, 155, 154101.	3.0	0
17	Electronic Structure Theory Calculations Using Modern Architectures: KNL vs Haswell. Journal of Chemical Theory and Computation, 2021, 17, 6910-6917.	5.3	1
18	Enabling large-scale correlated electronic structure calculations. , 2021, , .		7

#	Article	IF	CITATIONS
19	Faster Self-Consistent Field (SCF) Calculations on GPU Clusters. Journal of Chemical Theory and Computation, 2021, 17, 7486-7503.	5.3	23
20	Quantum Chemistry Common Driver and Databases (QCDB) and Quantum Chemistry Engine (QCE <scp>ngine</scp> ): Automation and interoperability among computational chemistry programs. Journal of Chemical Physics, 2021, 155, 204801.	3.0	15
21	Analytic non-adiabatic couplings for the spin-flip ORMAS method. Physical Chemistry Chemical Physics, 2020, 22, 1475-1484.	2.8	12
22	Development of the FMO/RI-MP2 Fully Analytic Gradient Using a Hybrid-Distributed/Shared Memory Programming Model. Journal of Chemical Theory and Computation, 2020, 16, 1039-1054.	5.3	17
23	Stability and Dissociation of Ethylenedione (OCCO). Journal of Physical Chemistry A, 2020, 124, 8209-8222.	2.5	6
24	High-Performance, Graphics Processing Unit-Accelerated Fock Build Algorithm. Journal of Chemical Theory and Computation, 2020, 16, 7232-7238.	5.3	25
25	Editorial: Modern Architectures and Their Impact on Electronic Structure Theory. Chemical Reviews, 2020, 120, 9015-9020.	47.7	14
26	Recent developments in the general atomic and molecular electronic structure system. Journal of Chemical Physics, 2020, 152, 154102.	3.0	734
27	Scaling the Hartree-Fock Matrix Build on Summit. , 2020, , .		10
28	An Accurate Quantum-Based Approach to Explicit Solvent Effects: Interfacing the General Effective Fragment Potential Method with <i>Ab Initio</i> Electronic Structure Theory. Journal of Physical Chemistry A, 2019, 123, 8460-8475.	2.5	16
29	Ionic liquids from a fragmented perspective. Physical Chemistry Chemical Physics, 2019, 21, 16878-16888.	2.8	10
30	Hybrid Distributed/Shared Memory Model for the RI-MP2 Method in the Fragment Molecular Orbital Framework. Journal of Chemical Theory and Computation, 2019, 15, 5252-5258.	5.3	26
31	Quasi-Atomic Bond Analyses in the Sixth Period: I. Relativistic Accurate Atomic Minimal Basis Sets for the Elements Cesium to Radon. Journal of Physical Chemistry A, 2019, 123, 5242-5248.	2.5	11
32	Quasi-Atomic Bond Analyses in the Sixth Period: II. Bond Analyses of Cerium Oxides. Journal of Physical Chemistry A, 2019, 123, 5249-5256.	2.5	18
33	Development of a combined quantum monte carlo-effective fragment molecular orbital method. Molecular Physics, 2019, 117, 1532-1540.	1.7	4
34	Analytic Gradients for the Spin-Flip ORMAS-CI Method: Optimizing Minima, Saddle Points, and Conical Intersections. Journal of Physical Chemistry A, 2019, 123, 1260-1272.	2.5	11
35	Application of a semiâ€empirical dispersion correction for modeling water clusters. Journal of Computational Chemistry, 2019, 40, 310-315.	3.3	7
36	Maximizing Performance under a Power Constraint on Modern Multicore Systems. Journal of Computer and Communications, 2019, 07, 252-266.	0.9	8

#	Article	IF	CITATIONS
37	A general spin-complete spin-flip configuration interaction method. Physical Chemistry Chemical Physics, 2018, 20, 2615-2626.	2.8	34
38	Benchmarking the Effective Fragment Potential Dispersion Correction on the S22 Test Set. Journal of Physical Chemistry A, 2018, 122, 4076-4084.	2.5	3
39	Quasi-Atomic Bonding Analysis of Xe-Containing Compounds. Journal of Physical Chemistry A, 2018, 122, 3442-3454.	2.5	18
40	A Quasi-Atomic Analysis of Three-Center Two-Electron Zr–H–Si Interactions. Journal of Physical Chemistry A, 2018, 122, 9653-9669.	2.5	21
41	Benchmarking of the <i>R</i> <sup>–7</sup> Anisotropic Dispersion Energy Term on the S22 Dimer Test Set. Journal of Physical Chemistry A, 2018, 122, 6100-6108.	2.5	2
42	Nodal variational principle for excited states. Physical Review A, 2018, 98, .	2.5	8
43	Core and Uncore Joint Frequency Scaling Strategy. Journal of Computer and Communications, 2018, 06, 184-201.	0.9	11
44	Intrinsic Resolution of Molecular Electronic Wave Functions and Energies in Terms of Quasi-atoms and Their Interactions. Journal of Physical Chemistry A, 2017, 121, 1086-1105.	2.5	44
45	Relativistic <i>ab Initio</i> Accurate Atomic Minimal Basis Sets: Quantitative LUMOs and Oriented Quasi-Atomic Orbitals for the Elements Li–Xe. Journal of Physical Chemistry A, 2017, 121, 3588-3597.	2.5	18
46	Dispersion Interactions in Water Clusters. Journal of Physical Chemistry A, 2017, 121, 3736-3745.	2.5	10
47	Dispersion Interactions in QM/EFP. Journal of Physical Chemistry A, 2017, 121, 9495-9507.	2.5	23
48	Identification and Characterization of Molecular Bonding Structures by ab initio Quasi-Atomic Orbital Analyses. Journal of Physical Chemistry A, 2017, 121, 8884-8898.	2.5	23
49	A new approach for secondâ€order perturbation theory. Journal of Computational Chemistry, 2016, 37, 1274-1282.	3.3	8
50	Analytic Gradients for the Effective Fragment Molecular Orbital Method. Journal of Chemical Theory and Computation, 2016, 12, 4743-4767.	5.3	21
51	Derivation and Implementation of the Gradient of the <i>R</i> <sup>–7</sup> Dispersion Interaction in the Effective Fragment Potential Method. Journal of Physical Chemistry A, 2016, 120, 639-647.	2.5	18
52	Silanol-Assisted Carbinolamine Formation in an Amine-Functionalized Mesoporous Silica Surface: Theoretical Investigation by Fragmentation Methods. Journal of Physical Chemistry B, 2016, 120, 1660-1669.	2.6	20
53	Importance of Three-Body Interactions in Molecular Dynamics Simulations of Water Demonstrated with the Fragment Molecular Orbital Method. Journal of Chemical Theory and Computation, 2016, 12, 1423-1435.	5.3	37
54	Dispersion Correction Derived from First Principles for Density Functional Theory and Hartree–Fock Theory. Journal of Physical Chemistry A, 2015, 119, 2161-2168.	2.5	17

#	Article	IF	CITATIONS
55	Combined Fragment Molecular Orbital Cluster in Molecule Approach to Massively Parallel Electron Correlation Calculations for Large Systems Journal of Physical Chemistry A, 2015, 119, 3587-3593.	2.5	26
56	A Comprehensive Analysis in Terms of Molecule-Intrinsic, Quasi-Atomic Orbitals. III. The Covalent Bonding Structure of Urea. Journal of Physical Chemistry A, 2015, 119, 10368-10375.	2.5	37
57	A Comprehensive Analysis in Terms of Molecule-Intrinsic Quasi-Atomic Orbitals. IV. Bond Breaking and Bond Forming along the Dissociative Reaction Path of Dioxetane. Journal of Physical Chemistry A, 2015, 119, 10376-10389.	2.5	31
58	A Comprehensive Analysis in Terms of Molecule-Intrinsic, Quasi-Atomic Orbitals. II. Strongly Correlated MCSCF Wave Functions. Journal of Physical Chemistry A, 2015, 119, 10360-10367.	2.5	49
59	Advances in molecular quantum chemistry contained in the Q-Chem 4 program package. Molecular Physics, 2015, 113, 184-215.	1.7	2,561
60	Interfacing the Ab Initio Multiple Spawning Method with Electronic Structure Methods in GAMESS: Photodecay of <i>trans-</i> Azomethane. Journal of Physical Chemistry A, 2014, 118, 10902-10908.	2.5	30
61	Analytic Gradient for Density Functional Theory Based on the Fragment Molecular Orbital Method. Journal of Chemical Theory and Computation, 2014, 10, 5297-5307.	5.3	32
62	The <i>R</i> <sup>–7</sup> Dispersion Interaction in the General Effective Fragment Potential Method. Journal of Chemical Theory and Computation, 2014, 10, 1576-1587.	5.3	25
63	Dynamics Simulations with Spin-Flip Time-Dependent Density Functional Theory: Photoisomerization and Photocyclization Mechanisms of <i>cis-</i> Stilbene in ππ* States. Journal of Physical Chemistry A, 2014, 118, 11987-11998.	2.5	84
64	Efficient and Accurate Fragmentation Methods. Accounts of Chemical Research, 2014, 47, 2786-2794.	15.6	81
65	Fast and Flexible Coupled Cluster Implementation. Journal of Chemical Theory and Computation, 2013, 9, 3385-3392.	5.3	48
66	A comprehensive analysis of molecule-intrinsic quasi-atomic, bonding, and correlating orbitals. I. Hartree-Fock wave functions. Journal of Chemical Physics, 2013, 139, 234107.	3.0	83
67	Hexamers and witchamers: Which hex do you choose?. Computational and Theoretical Chemistry, 2013, 1021, 70-83.	2.5	17
68	Accurate First Principles Model Potentials for Intermolecular Interactions. Annual Review of Physical Chemistry, 2013, 64, 553-578.	10.8	150
69	Fully Integrated Effective Fragment Molecular Orbital Method. Journal of Chemical Theory and Computation, 2013, 9, 2235-2249.	5.3	56
70	Charge transfer interaction using quasiatomic minimal-basis orbitals in the effective fragment potential method. Journal of Chemical Physics, 2013, 139, 194104.	3.0	17
71	Optimizing conical intersections of solvated molecules: The combined spin-flip density functional theory/effective fragment potential method. Journal of Chemical Physics, 2012, 137, 034116.	3.0	30
72	Large-Scale MP2 Calculations on the Blue Gene Architecture Using the Fragment Molecular Orbital Method. Journal of Chemical Theory and Computation, 2012, 8, 75-79.	5.3	45

#	Article	IF	CITATIONS
73	Structure and Dynamics of the 1-Hydroxyethyl-4-amino-1,2,4-triazolium Nitrate High-Energy Ionic Liquid System. Journal of Physical Chemistry B, 2012, 116, 503-512.	2.6	38
74	New Multithreaded Hybrid CPU/GPU Approach to Hartree–Fock. Journal of Chemical Theory and Computation, 2012, 8, 4166-4176.	5.3	75
75	Fragment Molecular Orbital Molecular Dynamics with the Fully Analytic Energy Gradient. Journal of Chemical Theory and Computation, 2012, 8, 5008-5012.	5.3	47
76	Fragmentation Methods: A Route to Accurate Calculations on Large Systems. Chemical Reviews, 2012, 112, 632-672.	47.7	945
77	Geometry Optimizations of Open-Shell Systems with the Fragment Molecular Orbital Method. Journal of Physical Chemistry A, 2012, 116, 4965-4974.	2.5	20
78	Benchmarking the performance of time-dependent density functional methods. Journal of Chemical Physics, 2012, 136, 104101.	3.0	295
79	The dispersion interaction between quantum mechanics and effective fragment potential molecules. Journal of Chemical Physics, 2012, 136, 244107.	3.0	29
80	Mixed-precision evaluation of two-electron integrals by Rys quadrature. Computer Physics Communications, 2012, 183, 1563-1567.	7.5	25
81	Using a Reactive Force Field To Correlate Mobilities Obtained from Solid-State <sup>13</sup> C NMR on Mesoporous Silica Nanoparticle Systems. Journal of Physical Chemistry C, 2011, 115, 16333-16339.	3.1	19
82	Solvent-Induced Shifts in Electronic Spectra of Uracil. Journal of Physical Chemistry A, 2011, 115, 4574-4582.	2.5	54
83	Solvent-Induced Shift of the Lowest Singlet π → π* Charge-Transfer Excited State of <i>p</i> -Nitroaniline in Water: An Application of the TDDFT/EFP1 Method. Journal of Physical Chemistry A, 2011, 115, 9801-9809.	2.5	49
84	Photoisomerization of Stilbene: A Spin-Flip Density Functional Theory Approach. Journal of Physical Chemistry A, 2011, 115, 7901-7911.	2.5	129
85	Modeling Solvent Effects on Electronic Excited States. Journal of Physical Chemistry Letters, 2011, 2, 2184-2192.	4.6	107
86	Fully analytic energy gradient in the fragment molecular orbital method. Journal of Chemical Physics, 2011, 134, 124115.	3.0	99
87	Effective Fragment Potential Study of the Interaction of DNA Bases. Journal of Physical Chemistry A, 2011, 115, 11269-11276.	2.5	37
88	Implementation of the analytic energy gradient for the combined time-dependent density functional theory/effective fragment potential method: Application to excited-state molecular dynamics simulations. Journal of Chemical Physics, 2011, 134, 054111.	3.0	36
89	Quasi-degenerate second-order perturbation theory for occupation restricted multiple active space self-consistent field reference functions. Journal of Chemical Physics, 2011, 135, 044101.	3.0	35
90	Solvent-Induced Frequency Shifts: Configuration Interaction Singles Combined with the Effective Fragment Potential Method. Journal of Physical Chemistry A, 2010, 114, 6742-6750.	2.5	74

#	Article	IF	CITATIONS
91	Exchange repulsion between effective fragment potentials and ab initio molecules. Theoretical Chemistry Accounts, 2010, 125, 481-491.	1.4	26
92	Uncontracted Rys Quadrature Implementation of up to G Functions on Graphical Processing Units. Journal of Chemical Theory and Computation, 2010, 6, 696-704.	5.3	95
93	Damping functions in the effective fragment potential method. Molecular Physics, 2009, 107, 999-1016.	1.7	98
94	Water and Alanine: From Puddles(32) to Ponds(49). Journal of Physical Chemistry B, 2009, 113, 14413-14420.	2.6	31
95	Accurate Methods for Large Molecular Systems. Journal of Physical Chemistry B, 2009, 113, 9646-9663.	2.6	188
96	Alanine: Then There Was Water. Journal of Physical Chemistry B, 2009, 113, 8657-8669.	2.6	59
97	Waterâ~'Benzene Interactions: An Effective Fragment Potential and Correlated Quantum Chemistry Study. Journal of Physical Chemistry A, 2009, 113, 2092-2102.	2.5	96
98	Optimizing Conical Intersections by Spinâ~'Flip Density Functional Theory: Application to Ethylene. Journal of Physical Chemistry A, 2009, 113, 12749-12753.	2.5	155
99	Ab initio molecular orbital study of the insertion of H2 into POSS compounds. Theoretical Chemistry Accounts, 2008, 120, 155-166.	1.4	16
100	Solvent effects on optical properties of molecules: A combined time-dependent density functional theory/effective fragment potential approach. Journal of Chemical Physics, 2008, 129, 144112.	3.0	91
101	Modeling π–π Interactions with the Effective Fragment Potential Method: The Benzene Dimer and Substituents. Journal of Physical Chemistry A, 2008, 112, 5286-5294.	2.5	70
102	Breaking Bonds of Open-Shell Species with the Restricted Open-Shell Size Extensive Left Eigenstate Completely Renormalized Coupled-Cluster Method. Journal of Physical Chemistry A, 2008, 112, 11873-11884.	2.5	28
103	Polarization energy gradients in combined quantum mechanics, effective fragment potential, and polarizable continuum model calculations. Journal of Chemical Physics, 2007, 126, 124112.	3.0	30
104	Breaking bonds with the left eigenstate completely renormalized coupled-cluster method. Journal of Chemical Physics, 2007, 127, 174106.	3.0	63
105	Developments in Parallel Electronic Structure Theory. Advances in Chemical Physics, 2007, , 267-294.	0.3	55
106	Chapter 10 The Effective Fragment Potential: A General Method for Predicting Intermolecular Interactions. Annual Reports in Computational Chemistry, 2007, 3, 177-193.	1.7	193
107	A Novel Approach to Parallel Coupled Cluster Calculations:  Combining Distributed and Shared Memory Techniques for Modern Cluster Based Systems. Journal of Chemical Theory and Computation, 2007, 3, 1312-1328.	5.3	115
108	Electrostatic energy in the effective fragment potential method: Theory and application to benzene dimer. Journal of Computational Chemistry, 2007, 28, 276-291.	3.3	108
