#	Article	IF	Citations
1	A matter of time: Recovery of plant species diversity in wild plant communities at declining nitrogen deposition. Diversity and Distributions, 2021, 27, 1180-1193.	4.1	16
2	Experimental light at night has a negative long-term impact on macro-moth populations. Current Biology, 2020, 30, R694-R695.	3.9	36
3	Agriculture intensification reduces plant taxonomic and functional diversity across European arable systems. Functional Ecology, 2020, 34, 1448-1460.	3.6	39
4	Soil heterogeneity and plant species diversity in experimental grassland communities: contrasting effects of soil nutrients and pH at different spatial scales. Plant and Soil, 2019, 442, 497-509.	3.7	26
5	Highâ€resolution peat volume change in a northern peatland: Spatial variability, main drivers, and impact on ecohydrology. Ecohydrology, 2019, 12, e2114.	2.4	14
6	Lost in diversity: the interactions between soilâ€borne fungi, biodiversity and plant productivity. New Phytologist, 2018, 218, 542-553.	7.3	160
7	Spatial heterogeneity in plantâ€“soil feedbacks alters competitive interactions between two grassland plant species. Functional Ecology, 2018, 32, 2085-2094.	3.6	24
8	Density-dependency and plant-soil feedback: former plant abundance influences competitive interactions between two grassland plant species through plant-soil feedbacks. Plant and Soil, 2018, 428, 441-452.	3.7	20
9	Including hydrological self-regulating processes in peatland models: Effects on peatmoss drought projections. Science of the Total Environment, 2017, 580, 1389-1400.	8.0	26
10	A global synthesis of the effects of diversified farming systems on arthropod diversity within fields and across agricultural landscapes. Global Change Biology, 2017, 23, 4946-4957.	9.5	259
11	Embryo dune development drivers: beach morphology, growing season precipitation, and storms. Earth Surface Processes and Landforms, 2017, 42, 1733-1744.	2.5	44
12	Thaw pond development and initial vegetation succession in experimental plots at a Siberian lowland tundra site. Plant and Soil, 2017, 420, 147-162.	3.7	19
13	Aboveâ€•and belowâ€ground responses of four tundra plant functional types to deep soil heating and surface soil fertilization. Journal of Ecology, 2017, 105, 947-957.	4.0	49
14	Factors underlying farmersâ€™ intentions to perform unsubsidised agri-environmental measures. Land Use Policy, 2016, 59, 207-216.	5.6	124
15	The role of summer precipitation and summer temperature in establishment and growth of dwarf shrub Betula nana in northeast Siberian tundra. Polar Biology, 2016, 39, 1245-1255.	1.2	24
16	Seasonal changes and vertical distribution of root standing biomass of graminoids and shrubs at a Siberian tundra site. Plant and Soil, 2016, 407, 55-65.	3.7	49
17	Effects of grass field margin management on food availability for Black-tailed Godwit chicks. Journal for Nature Conservation, 2016, 29, 45-50.	1.8	7
18	Artificial night lighting disrupts sex pheromone in a noctuid moth. Ecological Entomology, 2015, 40, 401-408.	2.2	69

#	Article	IF	Citations
19	Diversity effects on root length production and loss in an experimental grassland community. Functional Ecology, 2015, 29, 1560-1568.	3.6	31
20	Artificial light at night inhibits mating in a Geometrid moth. Insect Conservation and Diversity, 2015, 8, 282-287.	3.0	106
21	Food Availability for Meadow Bird Families in Grass Field Margins. Ardea, 2015, 103, 17-26.	0.6	5
22	Loss of Plant Species Diversity Reduces Soil Erosion Resistance. Ecosystems, 2015, 18, 881-888.	3.4	222
23	Collective agri-environment schemes: How can regional environmental cooperatives enhance farmersâ€™ intentions for agri-environment schemes?. Land Use Policy, 2015, 42, 759-766.	5.6	73
24	Experimental illumination of natural habitatâ€”an experimental set-up to assess the direct and indirect ecological consequences of artificial light of different spectral composition. Philosophical Transactions of the Royal Society B: Biological Sciences, 2015, 370, 20140129.	4.0	120
25	Permafrost collapse after shrub removal shifts tundra ecosystem to a methane source. Nature Climate Change, 2015, 5, 67-70.	18.8	147
26	How Does Tree Density Affect Water Loss of Peatlands? A Mesocosm Experiment. PLoS ONE, 2014, 9, e91748.	2.5	23
27	Do Field Margins Enrich the Diet of the Eurasian SkylarkAlauda arvensison Intensive Farmland?. Ardea, 2014, 102, 161-174.	0.6	9
28	Can frequent precipitation moderate the impact of drought on peatmoss carbon uptake in northern peatlands?. New Phytologist, 2014, 203, 70-80.	7.3	57
29	Artificial light at night causes diapause inhibition and sexâ€specific life history changes in a moth. Ecology and Evolution, 2014, 4, 2082-2089.	1.9	151
30	Speciesâ€™ traits influence ground beetle responses to farm and landscape level agricultural intensification in Europe. Journal of Insect Conservation, 2014, 18, 837-846.	1.4	31
31	Habitat use and diet of Skylarks (Alauda arvensis) wintering in an intensive agricultural landscape of the Netherlands. Journal of Ornithology, 2014, 155, 507-518.	1.1	26
32	Consequences of biodiversity loss for litter decomposition across biomes. Nature, 2014, 509, 218-221.	27.8	600
33	The effectiveness of ditch banks as dispersal corridor for plants in agricultural landscapes depends on speciesâ€™ dispersal traits. Biological Conservation, 2014, 171, 91-98.	4.1	24
34	Plant species richness promotes soil carbon and nitrogen stocks in grasslands without legumes. Journal of Ecology, 2014, 102, 1163-1170.	4.0	220
35	Temporal effects of agri-environment schemes on ditch bank plant species. Basic and Applied Ecology, 2013, 14, 289-297.	2.7	13
36	Predicting ecosystem stability from community composition and biodiversity. Ecology Letters, 2013, 16, 617-625.	6.4	251

#	Article	IF	Citations
37	Leaf litter quality drives litter mixing effects through complementary resource use among detritivores. Oecologia, 2013, 173, 269-280.	2.0	90
38	Response of ground-nesting farmland birds to agricultural intensification across Europe: Landscape and field level management factors. Biological Conservation, 2012, 152, 74-80.	4.1	86
39	Agricultural intensification and biodiversity partitioning in European landscapes comparing plants, carabids, and birds. , 2011, 21, 1772-1781.		221
40	Recovery of plant species richness during long-term fertilization of a species-rich grassland. Ecology, 2011, 92, 1393-1398.	3.2	53
41	Mixed effects of organic farming and landscape complexity on farmland biodiversity and biological control potential across Europe. Journal of Applied Ecology, 2011, 48, 570-579.	4.0	205
42	Macroâ€detritivore identity drives leaf litter diversity effects. Oikos, 2011, 120, 1092-1098.	2.7	77
43	Taxonomic and functional diversity of farmland bird communities across Europe: effects of biogeography and agricultural intensification. Biodiversity and Conservation, 2011, 20, 3663-3681.	2.6	34
44	Landscape composition influences farm management effects on farmland birds in winter: A pan-European approach. Agriculture, Ecosystems and Environment, 2010, 139, 571-577.	5.3	51
45	Field Simulation of Global Change: Transplanting Northern Bog Mesocosms Southward. Ecosystems, 2010, 13, 712-726.	3.4	47
46	Plant species richness regulates soil respiration through changes in productivity. Oecologia, 2010, 163, 805-813.	2.0	67
47	Effects of litters with different concentrations of phenolics on the competition between Calluna vulgaris and Deschampsia flexuosa. Plant and Soil, 2010, 327, 131-141.	3.7	19
48	Methane emissions in two drained peat agro-ecosystems with high and low agricultural intensity. Plant and Soil, 2010, 329, 509-520.	3.7	68
49	Persistent negative effects of pesticides on biodiversity and biological control potential on European farmland. Basic and Applied Ecology, 2010, 11, 97-105.	2.7	1,039
50	Travelling to a former sea floor: colonization of forests by understorey plant species on land recently reclaimed from the sea. Journal of Vegetation Science, 2010, 21, 167-176.	2.2	2
51	Plantâ€“soil interactions in the expansion and native range of a poleward shifting plant species. Global Change Biology, 2010, 16, 380-385.	9.5	75
52	Diversity enhances community recovery, but not resistance, after drought. Journal of Ecology, 2010, 98, 81-86.	4.0	227
53	Unveiling belowâ€ground species abundance in a biodiversity experiment: a test of vertical niche differentiation among grassland species. Journal of Ecology, 2010, 98, 1117-1127.	4.0	219
54	Decreased summer water table depth affects peatland vegetation. Basic and Applied Ecology, 2009, 10, 330-339.	2.7	124

#	Article	IF	Citations
55	Photosynthetic performance in Sphagnum transplanted along a latitudinal nitrogen deposition gradient. Oecologia, 2009, 159, 705-715.	2.0	68
56	Effects of competition on rootâ€“shoot allocation in Plantago lanceolata L.: adaptive plasticity or ontogenetic drift?. Plant Ecology, 2009, 201, 567-573.	1.6	55
57	The effect of nutrient supply and light intensity on tannins and mycorrhizal colonisation in Dutch heathland ecosystems. Plant Ecology, 2009, 201, 661-675.	1.6	33
58	Response of Sphagnum species mixtures to increased temperature and nitrogen availability. Plant Ecology, 2009, 204, 97-111.	1.6	43
59	Interactive effects of water table and precipitation on net CO₂ assimilation of three coâ€occurring Sphagnum mosses differing in distribution above the water table. Global Change Biology, 2009, 15, 680-691.	9.5	104
60	The angiosperm radiation revisited, an ecological explanation for Darwinâ€™s â€˜abominable mysteryâ€™. Ecology Letters, 2009, 12, 865-872.	6.4	118
61	Do meadow birds profit from agri-environment schemes in Dutch agricultural landscapes?. Biological Conservation, 2009, 142, 2949-2953.	4.1	41
62	The effect of temperature on growth and competition between Sphagnum species. Oecologia, 2008, 156, 155-167.	2.0	94
63	Longâ€term effects of climate change on vegetation and carbon dynamics in peat bogs. Journal of Vegetation Science, 2008, 19, 307-320.	2.2	85
64	The effect of increased temperature and nitrogen deposition on decomposition in bogs. Oikos, 2008, 117, 1258-1268.	2.7	60
65	Reconciling complexity with stability in naturally assembling food webs. Nature, 2007, 449, 599-602.	27.8	328
66	Reduced plantâ€“soil feedback of plant species expanding their range as compared to natives. Journal of Ecology, 2007, 95, 1050-1057.	4.0	131
67	Direct and indirect effects of the most widely implemented Dutch agri-environment schemes on breeding waders. Journal of Applied Ecology, 2006, 44, 70-80.	4.0	83
68	The Nitrogen Cycle in Boreal Peatlands. , 2006, , 195-230.		69
69	Short-term and long-term effects of tannins on nitrogen mineralisation and litter decomposition in kauri (Agathis australis (D. Don) Lindl.) forests. Plant and Soil, 2006, 287, 337-345.	3.7	32
70	Plant species as predictors of soil pH: Replacing expert judgement with measurements. Journal of Vegetation Science, 2005, 16, 461-470.	2.2	88
71	Diversity-productivity relationships: Initial effects, long-term patterns, and underlying mechanisms. Proceedings of the National Academy of Sciences of the United States of America, 2005, 102, 695-700.	7.1	335
72	Diversity of symbiotic root endophytes of the Helotiales in ericaceous plants and the grass, Deschampsia flexuosa. Studies in Mycology, 2005, 53, 147-162.	7.2	78

#	Article	IF	Citations
73	Plant species as predictors of soil pH: Replacing expert judgement with measurements. Journal of Vegetation Science, 2005, 16, 461.	2.2	5
74	Interactions between spatially separated herbivores indirectly alter plant diversity. Ecology Letters, 2004, 8, 30-37.	6.4	46
75	Ecological Effectiveness of Agri-Environment Schemes in Different Agricultural Landscapes in The Netherlands. Conservation Biology, 2004, 18, 775-786.	4.7	177
76	Changes in soil and vegetation during dune slack succession. Journal of Vegetation Science, 2004, 15, 209-218.	2.2	49
77	Plant species identity and diversity effects on different trophic levels of nematodes in the soil food web. Oikos, 2004, 106, 576-586.	2.7	356
78	How Phosphorus Availability Affects the Impact of Nitrogen Deposition on Sphagnum and Vascular Plants in Bogs. Ecosystems, 2004, 7, 793-804.	3.4	128
79	Declining Biodiversity in Agricultural Landscapes and the Effectiveness of Agri-environment Schemes. Ambio, 2004, 33, 499-502.	5.5	87
80	The interaction between epiphytic algae, a parasitic fungus and Sphagnum as affected by N and P. Oikos, 2003, 103, 59-68.	2.7	43
81	How litter quality affects mass loss and N loss from decomposing Sphagnum. Oikos, 2003, 103, 537-547.	2.7	128
82	Positive effects of plant species diversity on productivity in the absence of legumes. Ecology Letters, 2003, 6, 170-175.	6.4	168
83	Diversity reduces invasibility in experimental plant communities: the role of plant species. Ecology Letters, 2003, 6, 910-918.	6.4	180
84	N deposition affects N availability in interstitial water, growth of Sphagnum and invasion of vascular plants in bog vegetation. New Phytologist, 2003, 157, 339-347.	7.3	151
85	Effects of Increased Nitrogen Deposition on the Distribution of 15N-labeled Nitrogen between Sphagnum and Vascular Plants. Ecosystems, 2002, 5, 500-508.	3.4	57
86	Competition between Sphagnum magellanicum and Eriophorum angustifolium as affected by raised CO2 and increased N deposition. Oikos, 2002, 97, 415-425.	2.7	52
87	Response of a Sphagnum bog plant community to elevated CO2 and N supply. Plant Ecology, 2002, 162, 123-134.	1.6	37
88	Effects of elevated CO 2 and vascular plants on evapotranspiration in bog vegetation. Global Change Biology, 2001, 7, 817-827.	9.5	44
89	Raised atmospheric CO2 levels and increased N deposition cause shifts in plant species composition and production in Sphagnum bogs. Global Change Biology, 2001, 7, 591-598.	9.5	307
90	Effects of elevated carbon dioxide and increased nitrogen deposition on bog vegetation in the Netherlands. Journal of Ecology, 2001, 89, 268-279.	4.0	115

#	Article	IF	Citations
91	The effect of plant species on soil nitrogen mineralization. Journal of Ecology, 2001, 89, 555-561.	4.0	90
92	Effects of nutrients and shade on treeâ€grass interactions in an East African savanna. Journal of Vegetation Science, 2001, 12, 579-588.	2.2	153
93	Plant species and nutritional-mediated control over rhizodeposition and root decomposition. Plant and Soil, 2001, 228, 191-200.	3.7	87
94	Agri-environment schemes do not effectively protect biodiversity in Dutch agricultural landscapes. Nature, 2001, 413, 723-725.	27.8	526
95	SOIL NUTRIENT HETEROGENEITY ALTERS COMPETITION BETWEEN TWO PERENNIAL GRASS SPECIES. Ecology, 2001, 82, 2534-2546.	3.2	174
96	Soil Nutrient Heterogeneity Alters Competition between Two Perennial Grass Species. Ecology, 2001, 82, 2534.	3.2	12
97	Title is missing!. Plant Ecology, 2000, 148, 51-59.	1.6	26
98	Plant-Herbivore Interaction and Its Consequences for Succession in Wetland Ecosystems: A Modeling Approach. Ecosystems, 1999, 2, 122-138.	3.4	31
99	MODEL ANALYSIS OF THE EFFECTS OF HISTORIC CO2LEVELS AND NITROGEN INPUTS ON VEGETATION SUCCESSION. , 1999, 9, 920-935.		16
100	Effects of Dominant Plant Species on Soils during Succession in Nutrient-poor Ecosystems. Biogeochemistry, 1998, 42, 73-88.	3.5	168
101	Root morphological plasticity and nutrient acquisition of perennial grass species from habitats of different nutrient availability. Oecologia, 1998, 115, 351-358.	2.0	175
102	Impacts of Elevated Carbon Dioxide and Temperature on a Boreal Forest Ecosystem (CLIMEX Project). Ecosystems, 1998, 1, 345-351.	3.4	55
103	Litter Decomposability -- A Neglected Component of Plant Fitness. Journal of Ecology, 1994, 82, 187.	4.0	179
104	Experimental manipulation of succession in heathland ecosystems. Oecologia, 1994, 100-100, 38-44.	2.0	74
105	Competition between Plant Populations at Low and High Nutrient Supplies. Oikos, 1994, 71, 253.	2.7	86
106	Competition in Heathland along an Experimental Gradient of Nutrient Availability. Oikos, 1990, 57, 310.	2.7	181
107	Competition and Nutrient Availability in Heathland and Grassland Ecosystems. , 1990, , 93-116.		139
108	The effect of increased nutrient availability on vegetation dynamics in wet heathlands. Plant Ecology, 1988, 76, 63-69.	1.2	279

#	Article	IF	Citations
109	The effect of lignin and nitrogen on the decomposition of litter in nutrient-poor ecosystems: a theoretical approach. Canadian Journal of Botany, 1987, 65, 1116-1120.	1.1	86
110	Energy or nutrient regulation of decomposition: Implications for the mineralization-immobilization response to perturbations. Soil Biology and Biochemistry, 1984, 16, 63-67.	8.8	92
111	Competition between plant populations with different rooting depths. Oecologia, 1982, 53, 50-55.	2.0	114
112	Competition between plant populations with different rooting depths II. Pot experiments. Oecologia, 1981, 48, 334-341.	2.0	79
