#	ARTICLE	IF	CITATIONS
1	Delayed rFGF21 Administration Improves Cerebrovascular Remodeling and White Matter Repair After Focal Stroke in Diabetic Mice. <i>Translational Stroke Research</i> , 2022, 13, 311-325.	4.2	6
2	Aging related impairment of brain microvascular bioenergetics involves oxidative phosphorylation and glycolytic pathways. <i>Journal of Cerebral Blood Flow and Metabolism</i> , 2022, 42, 1410-1424.	4.3	18
3	Glycolytic and Oxidative Phosphorylation Defects Precede the Development of Senescence in Primary Human Brain Microvascular Endothelial Cells. <i>GeroScience</i> , 2022, 44, 1975-1994.	4.6	19
4	T-Lymphocyte Interactions with the Neurovascular Unit: Implications in Intracerebral Hemorrhage. <i>Cells</i> , 2022, 11, 2011.	4.1	4
5	tPA Mobilizes Immune Cells That Exacerbate Hemorrhagic Transformation in Stroke. <i>Circulation Research</i> , 2021, 128, 62-75.	4.5	81
6	Diabetes Mellitus/Poststroke Hyperglycemia: a Detrimental Factor for tPA Thrombolytic Stroke Therapy. <i>Translational Stroke Research</i> , 2021, 12, 416-427.	4.2	29
7	Development of fast multi-slice apparent T ₁ mapping for improved arterial spin labeling MRI measurement of cerebral blood flow. <i>Magnetic Resonance in Medicine</i> , 2021, 85, 1571-1580.	3.0	16
8	Recombinant Annexin A2 Administration Improves Neurological Outcomes After Traumatic Brain Injury in Mice. <i>Frontiers in Pharmacology</i> , 2021, 12, 708469.	3.5	6
9	Recombinant annexin A2 inhibits peripheral leukocyte activation and brain infiltration after traumatic brain injury. <i>Journal of Neuroinflammation</i> , 2021, 18, 173.	7.2	12
10	Caveolae-Mediated Endothelial Transcytosis across the Blood-Brain Barrier in Acute Ischemic Stroke. <i>Journal of Clinical Medicine</i> , 2021, 10, 3795.	2.4	17
11	QiShenYiQi ameliorates salt-induced hypertensive nephropathy by balancing ADRA1D and SIK1 expression in Dahl salt-sensitive rats. <i>Biomedicine and Pharmacotherapy</i> , 2021, 141, 111941.	5.6	10
12	The protective effect of isoflurane pretreatment on liver IRI by suppressing noncanonical pyroptosis of liver macrophages. <i>International Immunopharmacology</i> , 2021, 99, 107977.	3.8	7
13	Diabetes mellitus: A common comorbidity increasing hemorrhagic transformation after tPA thrombolytic therapy for ischemic stroke. <i>Brain Hemorrhages</i> , 2021, 2, 116-123.	1.0	6
14	Update: Microdialysis for Monitoring Cerebral Metabolic Dysfunction after Subarachnoid Hemorrhage. <i>Journal of Clinical Medicine</i> , 2021, 10, 100.	2.4	5
15	Estrogenic properties of Prunus cerasoides extract and its constituents in MCF7 cell and evaluation in estrogen-deprived rodent models. <i>Phytotherapy Research</i> , 2020, 34, 1347-1357.	5.8	4
16	Patent Foramen Ovale Attributable Cryptogenic Embolism With Thrombophilia Has Higher Risk for Recurrence and Responds to Closure. <i>JACC: Cardiovascular Interventions</i> , 2020, 13, 2745-2752.	2.9	22
17	EphrinB2-EphB2 signaling for dendrite protection after neuronal ischemia in vivo and oxygen-glucose deprivation in vitro. <i>Journal of Cerebral Blood Flow and Metabolism</i> , 2020, 41, 0271678X2097311.	4.3	2
18	Soluble vascular endothelial-cadherin in CSF after subarachnoid hemorrhage. <i>Neurology</i> , 2020, 94, e1281-e1293.	1.1	14

#	ARTICLE	IF	CITATIONS
19	FGF21 Protects against Aggravated Blood-Brain Barrier Disruption after Ischemic Focal Stroke in Diabetic db/db Male Mice via Cerebrovascular PPAR β Activation. <i>International Journal of Molecular Sciences</i> , 2020, 21, 824.	4.1	36
20	Protection against acute cerebral ischemia/reperfusion injury by QiShenYiQi via neuroinflammatory network mobilization. <i>Biomedicine and Pharmacotherapy</i> , 2020, 125, 109945.	5.6	51
21	An integrated hypothesis for miR-126 in vascular disease. <i>Medical Research Archives</i> , 2020, 8, .	0.2	11
22	Annexin A2 is a Robo4 ligand that modulates ARF6 activation-associated cerebral trans-endothelial permeability. <i>Journal of Cerebral Blood Flow and Metabolism</i> , 2019, 39, 2048-2060.	4.3	26
23	Recombinant FGF21 Protects Against Blood-Brain Barrier Leakage Through Nrf2 Upregulation in Type 2 Diabetes Mice. <i>Molecular Neurobiology</i> , 2019, 56, 2314-2327.	4.0	38
24	Ginkgo Flavonol Glycosides or Ginkgolides Tend to Differentially Protect Myocardial or Cerebral Ischemiaâ€“Reperfusion Injury via Regulation of TWEAK-Fn14 Signaling in Heart and Brain. <i>Frontiers in Pharmacology</i> , 2019, 10, 735.	3.5	42
25	Opening the time window. <i>Journal of Cerebral Blood Flow and Metabolism</i> , 2019, 39, 2539-2540.	4.3	9
26	Dual Antiplatelet Therapy Increases Hemorrhagic Transformation Following Thrombolytic Treatment in Experimental Stroke. <i>Stroke</i> , 2019, 50, 3650-3653.	2.0	15
27	Promoting Neuro-Supportive Properties of Astrocytes with Epidermal Growth Factor Hydrogels. <i>Stem Cells Translational Medicine</i> , 2019, 8, 1242-1248.	3.3	24
28	Augmented Brain Infiltration and Activation of Leukocytes After Cerebral Ischemia in Type 2 Diabetic Mice. <i>Frontiers in Immunology</i> , 2019, 10, 2392.	4.8	16
29	HDAC3 inhibition prevents blood-brain barrier permeability through Nrf2 activation in type 2 diabetes male mice. <i>Journal of Neuroinflammation</i> , 2019, 16, 103.	7.2	50
30	The Altered Reconfiguration Pattern of Brain Modular Architecture Regulates Cognitive Function in Cerebral Small Vessel Disease. <i>Frontiers in Neurology</i> , 2019, 10, 324.	2.4	27
31	Efficacy of High-intensity Statin Use for Transient Ischemic Attack Patients with Positive Diffusion-weighted Imaging. <i>Scientific Reports</i> , 2019, 9, 1173.	3.3	2
32	Double-negative T cells remarkably promote neuroinflammation after ischemic stroke. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2019, 116, 5558-5563.	7.1	128
33	Annexin A2 Deficiency Exacerbates Neuroinflammation and Long-Term Neurological Deficits after Traumatic Brain Injury in Mice. <i>International Journal of Molecular Sciences</i> , 2019, 20, 6125.	4.1	23
34	HDAC3 inhibition prevents oxygen glucose deprivation/reoxygenationâ€“induced transendothelial permeability by elevating PPAR β activity <i>in vitro</i> . <i>Journal of Neurochemistry</i> , 2019, 149, 298-310.	3.9	20
35	JOURNAL CLUB: Evaluation of Diffusion Kurtosis Imaging of Stroke Lesion With Hemodynamic and Metabolic MRI in a Rodent Model of Acute Stroke. <i>American Journal of Roentgenology</i> , 2018, 210, 720-727.	2.2	24
36	Stroke-induced immunosuppression and poststroke infection. <i>Stroke and Vascular Neurology</i> , 2018, 3, 34-41.	3.3	105

#	ARTICLE	IF	CITATIONS
37	Oligodendrogenesis after traumatic brain injury. <i>Behavioural Brain Research</i> , 2018, 340, 205-211.	2.2	25
38	bFGF Protects Against Oxygen Glucose Deprivation/Reoxygenation-Induced Endothelial Monolayer Permeability via S1PR1-Dependent Mechanisms. <i>Molecular Neurobiology</i> , 2018, 55, 3131-3142.	4.0	28
39	FGF21 Attenuates High-Fat Diet-Induced Cognitive Impairment via Metabolic Regulation and Anti-inflammation of Obese Mice. <i>Molecular Neurobiology</i> , 2018, 55, 4702-4717.	4.0	109
40	Endocrine Regulator rFGF21 (Recombinant Human Fibroblast Growth Factor 21) Improves Neurological Outcomes Following Focal Ischemic Stroke of Type 2 Diabetes Mellitus Male Mice. <i>Stroke</i> , 2018, 49, 3039-3049.	2.0	36
41	Neuroglobin promotes neurogenesis through Wnt signaling pathway. <i>Cell Death and Disease</i> , 2018, 9, 945.	6.3	37
42	Estrogenic effects of phytoestrogens derived from <i>Flemingia strobilifera</i> in MCF-7 cells and immature rats. <i>Archives of Pharmacal Research</i> , 2018, 41, 519-529.	6.3	7
43	Progression of White Matter Hyperintensities Contributes to Lacunar Infarction. , 2018, 9, 444.		29
44	Amyloid- β 25 μ g Upregulates Endogenous Neuroprotectant Neuroglobin via NF κ B Activation in vitro. <i>Journal of Alzheimer's Disease</i> , 2018, 64, 1163-1174.	2.6	16
45	12/15-Lipoxygenase Inhibition or Knockout Reduces Warfarin-Associated Hemorrhagic Transformation After Experimental Stroke. <i>Stroke</i> , 2017, 48, 445-451.	2.0	35
46	Sodium Tanshinone IIA Sulfonate Enhances Effectiveness Rt-PA Treatment in Acute Ischemic Stroke Patients Associated with Ameliorating Blood-Brain Barrier Damage. <i>Translational Stroke Research</i> , 2017, 8, 334-340.	4.2	71
47	Characteristics of primary rat microglia isolated from mixed cultures using two different methods. <i>Journal of Neuroinflammation</i> , 2017, 14, 101.	7.2	52
48	Association of increased Treg and Th17 with pathogenesis of moyamoya disease. <i>Scientific Reports</i> , 2017, 7, 3071.	3.3	32
49	Annexin A2 Plus Low-Dose Tissue Plasminogen Activator Combination Attenuates Cerebrovascular Dysfunction After Focal Embolic Stroke of Rats. <i>Translational Stroke Research</i> , 2017, 8, 549-559.	4.2	23
50	CD47 deficiency improves neurological outcomes of traumatic brain injury in mice. <i>Neuroscience Letters</i> , 2017, 643, 125-130.	2.1	18
51	Thrombospondin-1 Gene Deficiency Worsens the Neurological Outcomes of Traumatic Brain Injury in Mice. <i>International Journal of Medical Sciences</i> , 2017, 14, 927-936.	2.5	22
52	Infiltration and persistence of lymphocytes during late-stage cerebral ischemia in middle cerebral artery occlusion and photothrombotic stroke models. <i>Journal of Neuroinflammation</i> , 2017, 14, 248.	7.2	67
53	Propofol Enhances Hemoglobin-Induced Cytotoxicity in Neurons. <i>Anesthesia and Analgesia</i> , 2016, 122, 1024-1030.	2.2	8
54	Effects of Controlled Cortical Impact on the Mouse Brain Vasculome. <i>Journal of Neurotrauma</i> , 2016, 33, 1303-1316.	3.4	15

#	ARTICLE	IF	CITATIONS
55	TNFAIP1 contributes to the neurotoxicity induced by A β 25-35 in Neuro2a cells. BMC Neuroscience, 2016, 17, 51.	1.9	22
56	Dual effects of carbon monoxide on pericytes and neurogenesis in traumatic brain injury. Nature Medicine, 2016, 22, 1335-1341.	30.7	123
57	Danhong injection attenuates cardiac injury induced by ischemic and reperfused neuronal cells through regulating arginine vasopressin expression and secretion. Brain Research, 2016, 1642, 516-523.	2.2	21
58	Activation of microglial Toll-like receptor 3 promotes neuronal survival against cerebral ischemia. Journal of Neurochemistry, 2016, 136, 851-858.	3.9	14
59	Roles of Neuroglobin Binding to Mitochondrial Complex III Subunit Cytochrome c1 in Oxygen-Glucose Deprivation-Induced Neurotoxicity in Primary Neurons. Molecular Neurobiology, 2016, 53, 3249-3257.	4.0	34
60	Establishment of Cell-Based Neuroglobin Promoter Reporter Assay for Neuroprotective Compounds Screening. CNS and Neurological Disorders - Drug Targets, 2016, 15, 629-639.	1.4	21
61	Combination Low-Dose Tissue-Type Plasminogen Activator Plus Annexin A2 for Improving Thrombolytic Stroke Therapy. Frontiers in Cellular Neuroscience, 2015, 9, 397.	3.7	10
62	Targeting the Neurovascular Unit in Brain Trauma. CNS Neuroscience and Therapeutics, 2015, 21, 304-308.	3.9	43
63	Reduced Microvascular Volume and Hemispherically Deficient Vasoreactivity to Hypercapnia in Acute Ischemia: MRI Study Using Permanent Middle Cerebral Artery Occlusion Rat Model. Journal of Cerebral Blood Flow and Metabolism, 2015, 35, 1033-1043.	4.3	7
64	Low dose tPA plus annexin A2 combination attenuates tPA delayed treatment- associated hemorrhage and improves recovery in rat embolic focal stroke. Neuroscience Letters, 2015, 602, 73-78.	2.1	10
65	MMP-9 expression and activity is concurrent with endothelial cell apoptosis in the basilar artery after subarachnoid hemorrhaging in rats. Neurological Sciences, 2015, 36, 1241-1245.	1.9	16
66	Near infrared radiation protects against oxygen-glucose deprivation-induced neurotoxicity by down-regulating neuronal nitric oxide synthase (nNOS) activity in vitro. Metabolic Brain Disease, 2015, 30, 829-837.	2.9	13
67	Effects of Focal Cerebral Ischemia on Exosomal Versus Serum miR126. Translational Stroke Research, 2015, 6, 478-484.	4.2	57
68	From cell to cell: The breakdown of intercellular connectivity after stroke and how to regain contact. Brain Research, 2015, 1623, 1-2.	2.2	2
69	Near infrared radiation rescues mitochondrial dysfunction in cortical neurons after oxygen-glucose deprivation. Metabolic Brain Disease, 2015, 30, 491-496.	2.9	22
70	Effects of Tissue Plasminogen Activator and Annexin A2 Combination Therapy on Long-Term Neurological Outcomes of Rat Focal Embolic Stroke. Stroke, 2014, 45, 619-622.	2.0	29
71	Neuronal Production of Lipocalin-2 as a Help-Me Signal for Glial Activation. Stroke, 2014, 45, 2085-2092.	2.0	117
72	Evaluation of Plasma d-Dimer Plus Fibrinogen in Predicting Acute CVST. International Journal of Stroke, 2014, 9, 166-173.	5.9	46

#	ARTICLE	IF	CITATIONS
73	Combination Approaches to Attenuate Hemorrhagic Transformation After tPA Thrombolytic Therapy in Patients with Poststroke Hyperglycemia/Diabetes. <i>Advances in Pharmacology</i> , 2014, 71, 391-410.	2.0	21
74	Abstract 47: Proteomic Profiling of Acute Stroke Patients Highlights the Importance of vWF and vWF-Cleaving Protease (ADAMTS13) in Thrombolysis. <i>Stroke</i> , 2014, 45, .	2.0	0
75	Distal Occlusion of the Middle Cerebral Artery in Mice: Are We Ready to Assess Long-Term Functional Outcome?. <i>Translational Stroke Research</i> , 2013, 4, 297-307.	4.2	55
76	Transcriptional regulation of mouse neuroglobin gene by cyclic AMP responsive element binding protein (CREB) in N2a cells. <i>Neuroscience Letters</i> , 2013, 534, 333-337.	2.1	23
77	Neuroglobin overexpression inhibits oxygen-glucose deprivation-induced mitochondrial permeability transition pore opening in primary cultured mouse cortical neurons. <i>Neurobiology of Disease</i> , 2013, 56, 95-103.	4.4	70
78	Dysfunction of annexin A2 contributes to hyperglycaemia-induced loss of human endothelial cell surface fibrinolytic activity. <i>Thrombosis and Haemostasis</i> , 2013, 109, 1070-1078.	3.4	19
79	Early Insulin Glycemic Control Combined With tPA Thrombolysis Reduces Acute Brain Tissue Damages in a Focal Embolic Stroke Model of Diabetic Rats. <i>Stroke</i> , 2013, 44, 255-259.	2.0	28
80	Cerebrovascular degradation of TRKB by MMP9 in the diabetic brain. <i>Journal of Clinical Investigation</i> , 2013, 123, 3373-3377.	8.2	28
81	Effects of Minocycline Plus Tissue Plasminogen Activator Combination Therapy After Focal Embolic Stroke in Type 1 Diabetic Rats. <i>Stroke</i> , 2013, 44, 745-752.	2.0	67
82	Mitochondrial Mechanisms of Neuroglobin's Neuroprotection. <i>Oxidative Medicine and Cellular Longevity</i> , 2013, 2013, 1-11.	4.0	43
83	Intravenous tPA Therapy Does Not Worsen Acute Intracerebral Hemorrhage in Mice. <i>PLoS ONE</i> , 2013, 8, e54203.	2.5	17
84	Abstract WMP35: Low Level Laser Therapy (LLLT) Protects Against Oxygen-Glucose Deprivation-Induced Neuron Death by Modulating Nitric Oxide and ROS Production In Vitro. <i>Stroke</i> , 2013, 44, .	2.0	0
85	Abstract TP66: Quantitative Proteomic Profile of Tissue Plasminogen Activator (tPA) Responders. <i>Stroke</i> , 2013, 44, .	2.0	0
86	Transcriptional regulation mechanisms of hypoxia-induced neuroglobin gene expression. <i>Biochemical Journal</i> , 2012, 443, 153-164.	3.7	41
87	A Rat Model of Studying Tissue-Type Plasminogen Activator Thrombolysis in Ischemic Stroke With Diabetes. <i>Stroke</i> , 2012, 43, 567-570.	2.0	64
88	Plasminogen Activator Inhibitor-1 and Thrombotic Cerebrovascular Diseases. <i>Stroke</i> , 2012, 43, 2833-2839.	2.0	94
89	Upper limb ischemic preconditioning prevents recurrent stroke in intracranial arterial stenosis. <i>Neurology</i> , 2012, 79, 1853-1861.	1.1	310
90	Mitochondrial distribution of neuroglobin and its response to oxygen-glucose deprivation in primary-cultured mouse cortical neurons. <i>Neuroscience</i> , 2012, 218, 235-242.	2.3	53

#	ARTICLE	IF	CITATIONS
91	Clinical differences between acute CVST and non-thrombotic CVSS. <i>Clinical Neurology and Neurosurgery</i> , 2012, 114, 1257-1262.	1.4	6
92	Neuroglobin-overexpression reduces traumatic brain lesion size in mice. <i>BMC Neuroscience</i> , 2012, 13, 67.	1.9	32
93	A case of Susac's syndrome in a Chinese male. <i>Journal of the Neurological Sciences</i> , 2012, 314, 181-182.	0.6	7
94	Neuroglobin, a Novel Target for Endogenous Neuroprotection against Stroke and Neurodegenerative Disorders. <i>International Journal of Molecular Sciences</i> , 2012, 13, 6995-7014.	4.1	64
95	Neuregulin-1 Effects on Endothelial and Bloodâ€“Brain Barrier Permeability After Experimental Injury. <i>Translational Stroke Research</i> , 2012, 3, 119-124.	4.2	40
96	CVST, Distinguished from Nonthrombotic Cvss before Treatment â€“ a Must. <i>International Journal of Stroke</i> , 2012, 7, 274-274.	5.9	1
97	Neuroglobin: A Novel Target for Endogenous Neuroprotection. , 2012, , 353-372.		1
98	Neuroglobin Is an Endogenous Neuroprotectant for Retinal Ganglion Cells against Glaucomatous Damage. <i>American Journal of Pathology</i> , 2011, 179, 2788-2797.	3.8	47
99	Gammaâ€“glutamylcysteine ethyl ester protects cerebral endothelial cells during injury and decreases bloodâ€“brain barrier permeability after experimental brain trauma. <i>Journal of Neurochemistry</i> , 2011, 118, 248-255.	3.9	23
100	Visualization of Clot Lysis in a Rat Embolic Stroke Model. <i>Stroke</i> , 2011, 42, 1110-1115.	2.0	21
101	Proteomic Protease Substrate Profiling of tPA Treatment in Acute Ischemic Stroke Patients: A Step Toward Individualizing Thrombolytic Therapy at the Bedside. <i>Translational Stroke Research</i> , 2010, 1, 268-275.	4.2	29
102	Annexin A2 Combined with Low-Dose tPA Improves Thrombolytic Therapy in a Rat Model of Focal Embolic Stroke. <i>Journal of Cerebral Blood Flow and Metabolism</i> , 2010, 30, 1137-1146.	4.3	75
103	Annexin A2. <i>Stroke</i> , 2010, 41, S54-8.	2.0	27
104	Neuroprotective roles and mechanisms of neuroglobin. <i>Neurological Research</i> , 2009, 31, 122-127.	1.3	47
105	Effects of neuroglobin overexpression on mitochondrial function and oxidative stress following hypoxia/reoxygenation in cultured neurons. <i>Journal of Neuroscience Research</i> , 2009, 87, 164-170.	2.9	114
106	Neurovascular effects of CD47 signaling: Promotion of cell death, inflammation, and suppression of angiogenesis in brain endothelial cells in vitro. <i>Journal of Neuroscience Research</i> , 2009, 87, 2571-2577.	2.9	35
107	Role of oxidative stress and caspase 3 in CD47â€“mediated neuronal cell death. <i>Journal of Neurochemistry</i> , 2009, 108, 430-436.	3.9	32
108	CD47 gene knockout protects against transient focal cerebral ischemia in mice. <i>Experimental Neurology</i> , 2009, 217, 165-170.	4.1	52
